SUGGESTED CITATION

U.S. Bureau of the Census. U.S. Census of Agriculture: 1959. Vol. III,
Irrigation of Agricultural Lands
U.S. Government Printing Office, Washington, D.C., 1962

PREFACE

Volume III: Irrigation of Agricultural Lands presents all available data for the 1959 Census of Irrigation.

The 1959 Census of Irrigation covered irrigation only in the 17 conterminous Western States, Louisiana, and Hawaii. This report presents some summary data on irrigated land for the same area, obtained in the 1959 Census of Agriculture.

The 1959 Census of Irrigation was taken in conformity with the Act of Congress of August 31, 1954 (amended August 1957), which was codified Title 13, United States Code.

Most of the data presented in the report were collected by mail. Reports for irrigation enterprises with operations limited to a drainage basin area for which reports could not be obtained by mail were secured by census enumerators.

The planning of the census was performed by Hugh H. Hansen and Henry L. DeGraff, Irrigation Economists, under the supervision of Ray Hurley, Chief, Agriculture Division. Census enumerators worked under the supervision of Robert B. Voight, then Chief of the Field Division. Reports of irrigation enterprises with operations in more than one drainage basin were obtained by John Zimmer, Raymond Anderson, and Wayne Ehlers of the Agricultural Research Service of the U.S. Department of Agriculture, working as special agents of the Bureau of the Census. The compilation of the statistics was under the supervision of Henry L. DeGraff. George Coffman reviewed most of the tabulations and the statistical tables. Maps accompanying this report were prepared under the supervision of William T. Fry, Chief of the Geography Division, Bureau of the Census. This report was written by Henry L. DeGraff, Irrigation Economist, Warder B. Jenkins, Assistant Chief, Agriculture Division, and Ray Hurley, Chief of the Agriculture Division.

October 1962.

III

UNITED STATES CENSUS OF AGRICULTURE: 1959

FINAL REPORTS

Volume I—Counties—A separate part for each State, Puerto Rico, Guam, Virgin Islands, and American Samoa. Statistics on number of farms; farm characteristics; acreage in farms; cropland and other uses of land; land-use practices; irrigation; farm facilities and equipment; farm labor; farm expenditures; use of commercial fertilizer; number and kind of livestock; acres and production of crops; value of farm products; characteristics of commercial farms, farms classified by tenure, size, type, and economic class; and comparative data from the 1954 Census.

Part	State or States	Part	State or States	Part	State or States	Part	State or States
1	New England States:	15	West North Central:	30	East South Central:	44	Mountain—Con.
2	Maine.	16	Minnesota.	31	Kentucky.	45	Utah.
3	New Hampshire.	17	Iowa.	32	Tennessee.		Nevada.
4	Vermont.	18	Missouri.	33	Alabama.		Pacific:
5	Massachusetts.	19	North Dakota.	34	Mississippi.	46	Washington.
6	Rhode Island.	20	South Dakota.	35	West South Central:	47	Oregon.
7	Connecticut.	21	Nebraska.	36	Arkansas.	48	California.
8	Middle Atlantic States:	22	Kansas.	37	Louisiana.	49	Alaska.
9	New York.	23	South Atlantic:	38	Oklahoma.	50	Hawaii.
10	New Jersey.	24	Delaware.	39	Texas.		Other Areas:
11	Pennsylvania.	25	Maryland.	40	Montana.	51	American Samoa.
12	East North Central:	26	Virginia.	41	Idaho.	52	Guam.
13	Ohio.	27	West Virginia.	42	Wyoming.	53	Puerto Rico.

	Michigan.		Georgia.		Arizona.		
	Wisconsin.		Florida.				

Volume II—General Report—In 1 volume and also as 13 separates (for the Introduction and for each chapter). Statistics by subjects for 1959 and prior censuses. Statistics are presented for the United States, geographic regions, and divisions, and for the States.

Chapter	Title	Chapter	Title
I	Introduction.	VII	Field Crops and Vegetables.
II	Farms and Land in Farms.	VIII	Fruits and Nuts, Horticultural Specialties, Forest Products.
III	Age, Residence, Years on Farm, Work Off Farm.	IX	Value of Farm Products.
IV	Farm Facilities, Farm Equipment.	X	Color, Race, and Tenure of Farm Operator.
V	Farm Labor, Use of Fertilizer, Farm Expenditures, and Cash Rent.	XI	Economic Class of Farm.
VI	Size of Farm.	XII	Type of Farm.
	Livestock and Livestock Products.		

Volume III—Irrigation of Agricultural Lands—Data from the Irrigation Censuses of 1959 and 1950, by drainage basins, for the conterminous United States and for each of the 17 western States and Louisiana. Separate maps are available. Report also includes data from the 1959 Census of Agriculture for land irrigated and acres and production of crops on irrigated land in the 18 conterminous States and Hawaii.

Volume IV—Drainage of Agricultural Lands—Statistics for States and counties and for the conterminous United States, presenting 1960 data on number, area, physical works, and costs for drainage projects of 500 or more acres by size, type, and year organized. Maps are included.

Volume V—Special Reports

Part 1.—Special Census of Horticultural Specialties—Statistics for States, except Alaska and Hawaii, and for the conterminous United States, presenting 1959 data on number and kinds of operations, gross receipts and/or sales, sales of specified products, inventories, employment, and structures and equipment.

Part 2.—Irrigation in Humid Areas—Statistics for 30 eastern States showing 1960 data on acres irrigated, number of constructed ponds and reservoirs, source and method of applying water, type of pumping power, acreage of individual crops irrigated, and frequency of irrigation by States and counties.

Part 3.—Ranking Agricultural Counties—Statistics for selected items of inventory and agricultural production for the leading counties in the United States.

Part 4.—Farm Taxes and Farm Mortgage—A cooperative report by the Economic Research Science, U.S. Department of

Agriculture and the Bureau of the Census, U.S. Department of Commerce, presenting 1961 data by States on taxes on farms, number of mortgaged farms operated by full owners and part owners, amount of mortgage debt held by principal lending agencies, and amount of interest paid.

Part 5.—1960 Sample Survey of Agriculture—Statistics by economic class and type of farm, showing 1960 data on farm-operator-family income from farm and off-farm sources; inventory and use of selected types of farm equipment, tractors by year made and fuel used; number, size, and materials used for new buildings constructed 1958 to 1960; number of farmers having contracts with dealers, processors, or others for the production and marketing of 15 farm products; and real estate and non-real-estate debts of farm operators and farm landlords by lending agencies.

Part 6.—A Graphic Summary of Agriculture, 1959—A cooperative report by the Economic Research Service, U.S. Department of Agriculture and the Bureau of the Census, U.S. Department of Commerce, presenting graphically for 1959 and prior census years some of the significant uses of agricultural land; the extent and nature of the various kinds of tenure under which farms are held and operated; and changes and developments in the use of agricultural resources and production of agricultural products.

Special Publication—Principal Data-Collection Forms and Procedures—United States Census of Agriculture, 1959, and Related Surveys—Facsimiles of the enumeration forms used, showing variations for the 50 States, Puerto Rico, American Samoa, Guam, and the Virgin Islands, together with brief descriptions of the census field procedures for the census and the related surveys.

INTRODUCTION

1959 CENSUS OF IRRIGATION

Data regarding irrigation were collected from two sources for the 1959 Censuses of Agriculture and Irrigation.

In the 1959 Census of Agriculture, information about irrigation was collected directly from farm operators regarding acres irrigated, and for 19 States regarding crops irrigated and source of water. The inquiries for the census of agriculture for the 17 continuous Western States, Louisiana, and Hawaii were as follows:

215. Of the total land in this place (reported in question 203), how many acres were irrigated this year? None ☐ Acres ☐

(If "None," mark X and skip to question 216.)

216. How many acres in this place were irrigated by sprinklers this year? None ☐ Acres ☐

216. From how many acres of irrigated land were crops harvested this year? None ☐ Acres ☐

(Be sure to include all irrigated land from which hay was cut and all irrigated land in both bearing and nonbearing fruit and nut crops and irrigated land from which volunteer crops were harvested.)

(If "None," mark X and skip to question 217.)

216. What part of the land from which crops were harvested this year was irrigated? All ☐ Part ☐

(If "All," mark X and skip to question 217.)

(If "Part," give below name and acres irrigated for each crop. If all orchard was irrigated, list "Orchard," and if all vegetables for sale, list "Vegetables.")

Name of crop irrigated?	Acres irrigated?	Name of crop irrigated?	Acres irrigated?
(1)		(3)	
(2)		(4)	

[217] What percent of the irrigation water used on this place this year was obtained—

(a) From a well (pumped or flowing) or spring directly by this farm or from another farm? %

(b) From a stream, lake, drainage ditch, or reservoir directly by this farm or from another farm? %

(c) From a mutual or cooperative water or ditch company, irrigation district, or other irrigation organization? (Give name below.) %

(The total for questions (a), (b), and (c) must = 100%.)

Name Name

The inquiries for the 30 remaining States (except Alaska) were as follows:

215. Of the total land in this place (reported in question 203), how many acres were irrigated this year? None ☐ Acres ☐

A special survey was made in 1960 for farms for which land irrigated was reported in the 1959 Census of Agriculture for these 30 States. This survey obtained information regarding source of water, method of irrigation, type of power used for pumping, crops irrigated, constructed reservoirs, and year irrigation was started. The results of this survey appear in Volume V, Part 2: "Irrigation in Humid Areas" of the reports for the 1959 Census of Agriculture.

Data regarding the irrigation operations were obtained from irrigation organizations. With few exceptions, the 1959 Census of Irrigation included only organizations which supplied water to two or more farms. This enumeration included the 17 continuous Western States, Louisiana, and Hawaii. Three questionnaires were used in 1959 to enumerate irrigation organizations. These three forms requested the same basic information but differed according to the type of organization each was designed to enumerate. Facsimile copies of these questionnaires are shown in the appendix of this report. A more complete discussion of each questionnaire including its purpose, is given on page XVII.

History of census collection of irrigation data.—Inquiries relating to irrigation of farm and ranch lands in the United States have been included in each decennial census of agriculture beginning with 1890 and for each mid-decennial census of agriculture beginning with 1935. The 1890 general questionnaire for the census of agriculture, used in all States and territories, contained one inquiry to obtain the total acreage irrigated on each farm and another to obtain the number of artesian wells flowing. Other facts were obtained by direct correspondence and special schedules addressed to each irrigator. The 1890 report (Volume V of the Eleventh Census of the United States) presented a limited amount of irrigation data for 16 States or territories in the western part of the United States, listed, for discussion purposes, under two groupings, viz, arid region and subhumid region. The arid region embraced a part or the whole of 8 States—California, Colorado, Idaho, Montana, Nevada, Oregon, Washington, and Wyoming—and the whole of 3 territories—Arizona, New Mexico, and Utah. The subhumid region embraced parts of 5 States, viz, North Dakota, South Dakota, Nebraska, Kansas, and Texas. The statistics presented in the 1890 report showed 3,631,381 acres had been irrigated in 1889 on 54,136 farms. Irrigation of Indian reservation lands was not included.

In the 1900 Census of Agriculture, two inquiries relating to irrigation of farm and ranch lands were carried, for all States and territories. These two inquiries classified the number of acres irrigated in 1899 according to whether the irrigation water came from natural streams or from pumped or artesian wells. Statistics were presented separately, first, for three groupings of States and territories, viz, arid States which corresponded to the similarly designated grouping in 1890; semiarid States which, with the addition of Oklahoma, comprised the 1890 grouping under subhumid States; and the humid States. (See Volume VI, Part II, of the Twelfth Census of the United States.) The latter grouping, for the 1900 report, was made up of four New England States, the three Middle Atlantic States, and Florida. Irrigation carried out on Indian reservations was excluded. The 1900 report acknowledged that watering of market gardens, even those of considerable size, often was not reported as irrigation.

Recognition was taken of the fact that many acres of irrigated rice, except for Texas, had not been included in the totals for the three main groupings of States. (Rice irrigation in Texas really began about 1897, the industry receiving great impetus from the success of the planters in southwestern Louisiana.) Therefore, some separate data were presented in the 1900 report for irrigated rice farms in Alabama, Georgia, Louisiana, Mississippi, North Carolina, and South Carolina as well as for Texas. A few figures were presented for irrigated sugarcane, rice, and other crops produced in the Hawaiian Islands. The report for that year contained these observations in respect to rice. "The collection of statistics of irrigation in the Southern States, especially of those relating to the irrigation of rice, has been attended with many difficulties. In the coast counties rice is reported as grown with and without irrigation, and in many instances the yield per acre is nearly the same. To determine the extent of irrigation, correspondence with the planters was necessary, but . . . results are not satisfactory. The data concerning the large plantations

were quite fully reported, and upon these the census figures are based, no account having been taken of many small plantations growing rice from which no special reports were received."

A joint resolution of Congress, approved June 30, 1902, provided for the collection of data on irrigation for the crop year 1902. Questionnaires were mailed to irrigators reported in the 1900 Census of Agriculture and to officials of important canal companies. The statistics received by mail were supplemented by field work in a few States and by a limited amount of information from other sources. The data obtained were tabulated by drainage basins in order, so it was reported, that a better knowledge may be had of the extent of use of these waters. (See Census Bulletin 16, "Irrigation in the United States: 1902," published in 1904.) The 1902 Special Census included the same 11 arid States and territories, 6 semiarid States, 8 humid States, and 6 rice-growing States for which data were presented in the 1900 report. Irrigators in the Hawaiian Islands were not canvassed for the 1902 Special Survey of Irrigation.

Beginning with 1910, a special census of irrigation has been taken, decennially, in the United States. The law relating to the first of these special irrigation censuses provided that the inquiry should cover "the arid region of the United States." The "arid region" was held to include all sections of the United States where irrigation is commonly practiced in the growing of farm crops. The 1910 Special Census of Irrigation included the western part of the tier of States formed by the Dakotas, Nebraska, Kansas, Oklahoma, and Texas, and all States and territories between these States and the Pacific Ocean. Hawaii and the other insular possessions were not covered. Under a broad interpretation, the 1910 Special Census of Irrigation was extended to the rice-growing districts of Louisiana, Texas, and Arkansas. A special questionnaire pertaining to irrigation enterprises was prepared and the data were collected by special agents. This irrigation questionnaire was designed to secure more detailed information than was called for by the general questionnaire for the census of agriculture carried by the enumerators who were charged with collecting data in respect to individual farms and the population. The latter enumerators, in areas using water for irrigation, made use of a supplemental irrigation schedule. (See Volumes V, VI, and VII of the reports of the Thirteenth Census for irrigation data for 1910, from both the special irrigation census and from the general census.)

For 1920, the basic plan for gathering irrigation statistics provided that the census of agriculture enumerators, in all States, would obtain a few facts in regard to land to which water had been supplied, for agricultural purposes, by artificial means or by seepage from canals, reservoirs, or other irrigated lands. A cross (X) was required to be placed before the name of each crop irrigated. In the 17 most westerly States—Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming—and also in Arkansas and Louisiana, this same general class of enumerators were instructed to obtain an irrigation schedule for each enterprise supplying water to fewer than 5 farms. Special agents were employed to obtain, in the 19 listed States, irrigation schedules for the larger enterprises and, after the regular enumeration had been completed, for any small ones missed by the general census enumerators. After 1910, rice growing became quite important in California. Since the area devoted to that crop, in that State, is not geographically separated from other lands used for growing irrigated harvested crops or irrigated pasture, all data related to rice growing in the 19 listed States, were consolidated for the first time, in the Fourteenth Census reports with the data for other irrigated lands. (See Volume VII of the reports of the Fourteenth Census.)

The first mid-decennial census of agriculture was taken in 1925. No inquiries were made for the 1925 census to identify irrigated land or irrigated crops. In each subsequent mid-decennial census, some data in regard to irrigation have been obtained, though not necessarily published, for each State, in the general census of agriculture.

In the 1930 census, irrigation statistics were gathered in a manner closely similar to that followed ten years earlier. The census of agriculture enumerator, regardless of the State in which he was working, was required to obtain a few facts for irrigated cropland (not total irrigated land) and to identify any harvested crop wholly or partially irrigated. For each harvested crop, partially grown on dryland, provision was made to list separately the dryland acres and production. The census of agriculture enumerator, in the same 19 States covered in the 1910 and 1920 Censuses of Irrigation, was required to fill a relatively simple questionnaire for individual, partnership, and cooperative enterprises serving one to four farms. For enterprises of other types, and partnership and cooperative enterprises serving more than four farms, a more elaborate questionnaire and special enumeration procedure were used. United States Government enterprises were reported direct to the Bureau of the Census by the Commissioner of the Bureau of Reclamation and the Commissioner of the Bureau of Indian Affairs, the separate reports being prepared by local division or project engineers under the supervision of these officials. Reports for others of the group of larger enterprises were obtained by mail. The mail canvass preceded the work of the enumerators, which permitted census supervisors to detail conveniently located enumerators who had performed good work in reporting the smaller enterprises, to the enumeration of enterprises which had not already been covered by reports obtained by mail. Finally, such enterprises for which reports had been obtained neither by mail nor through the regular enumerators were canvassed by special enumerators. (See "Irrigation of Agricultural Lands," one of the 1930 Census of Agriculture reports.)

In the 1935 Census of Agriculture, only one inquiry in regard to irrigation appeared on the questionnaire for the general census of agriculture. This one question was designed to obtain the total acreage from which irrigated crops were harvested in 1934. (See Volume III of the 1935 Census of Agriculture reports for data for irrigation for all States.) The publication of irrigation data for each State, as presented in the summary report for the 1935 Census of Agriculture has been continued for each succeeding census. Sometimes all of the available data have been presented in the summary report for the census of agriculture while for other years, when a special census of irrigation was conducted, some of the data appear in the summary report for the census of agriculture and the remaining in the special report dealing with irrigation.

In the 1940 Census of Agriculture, the total acreage of land from which irrigated crops were harvested and the total acreage of irrigated land used only for pasture or grazing were secured in all States. In the 17 most westerly States and in Arkansas and Louisiana, the irrigated area was also obtained for many of the individual crops. No provision was made on the questionnaire for showing separately the total production of a crop harvested from irrigated land. However, the tabulation plan provided for a separation of the acreage and production of the farms reporting a crop wholly irrigated and of the farms reporting a crop wholly nonirrigated. A limited amount of data was also tabulated for irrigated farms in Florida. (See Volume I, Volume III, and "Irrigation of Agricultural Lands" of the 1940 Census of Agriculture reports for irrigation data obtained in the 1940 general census of agriculture; also see Volume III for some historical data beginning with those for 1890.) The special census of irrigation for 1940 was conducted in Florida in addition to the 19

States referred to above. In the 1935 Census of Agriculture, 2,751 farms in Florida had been recorded as having 65,832 acres of irrigated farm and ranch land in 1934. These were larger totals than shown for any State other than those included in the designated 18 irrigation States covered in several special censuses of irrigation. (In the 1940 report "Irrigation of Agricultural Lands," statistics were presented for 19 States as one group while those for Florida were summarized with any available data presented for the group of humid States.)

The questionnaire for the 1945 Census of Agriculture contained this inquiry: "Total land in this farm irrigated in 1944." Provision was made, in the reporting form for the 19 irrigation States, for the enumerator to identify, with a check mark, crops harvested from irrigated land. However data collected in the 1945 Census of Agriculture on irrigation were not published because of their incompleteness. (See page XXVII of Volume II of the 1945 Census of Agriculture reports.) The incompleteness seemed to be more general in areas where irrigation was not widely practiced. Later, after a review of the tabulated totals for each county and some editing to correct the most likely cases of incomplete enumeration, a six-page pamphlet was issued, presenting a comparison of 1945 and 1940 census totals. This special report gave county data for farms reporting irrigated land and acres of irrigated land. However, data for counties with less than 100 acres irrigated in 1944 were consolidated in each State under the heading "All other counties." In the 1950 summary report of the census of agriculture (see pages 11, 62, and 63 of Volume II of the 1950 Census of Agriculture reports), the State totals for 1945 were published and are compared with data for prior censuses. In the 1950 Census of Agriculture, data were obtained on total land irrigated in 1949 and on acres irrigated by sprinklers. Additional data in respect to irrigation were obtained for 20 States, the 17 Western States, Arkansas, Louisiana, and Florida. The additional information obtained included a classification of the total irrigated land into four categories according to use, viz, irrigated cropland harvested, irrigated wild grass pasture, irrigated tame grass pasture, and irrigated cropland not harvested and not pastured; and information as to the specific crops irrigated and the supplier of the irrigation water. (See Volumes I, II, and III of the 1950 Census of Agriculture reports for these data.) In the 1950 Census of Irrigation, two questionnaires were used. One was used for the enumeration of irrigation enterprises operated by farms individually and the other for irrigation companies, districts, and other enterprises not operated by individual farms. The enterprises operated by individual farms were enumerated at the same time that the other census information for farms was obtained, by census of agriculture enumerators who receive special training for the enumeration of the irrigation enterprises. Enumeration of the irrigation enterprises that supplied 10 or more farms was accomplished in advance of the enumeration of the census of agriculture through the employment of specially qualified irrigation technicians—mostly professional employees of the Soil Conservation Service of the United States Department of Agriculture. Lists of enterprises serving 10 or more farms had been compiled, in part, from the reports collected in the 1940 Census of Irrigation. Another list, made currently while the census of agriculture enumeration was being conducted, was the principal source for the names of enterprises that supplied water for two to nine farms. These latter enterprises were enumerated by special enumerators trained and supervised by the irrigation technicians. (See Volume III: "Irrigation of Agricultural Lands" of the 1950 Census of Agriculture reports for statistics and their comparability with those from prior censuses.)

For the 1954 Census of Agriculture, several inquiries were used to obtain irrigation data in the 17 conterminous Western States and in Arkansas, Florida, Louisiana, and southeastern Missouri. For all of these areas, the inquiries related to the 1954 acreage

of irrigated land from which crops were harvested and the names of the crops for which the entire acreage harvested was irrigated in 1954. The area of irrigated pasture was also obtained except in Arkansas, Louisiana, and southeastern Missouri. In the remaining 27 States and Missouri except for southeastern counties in Missouri, the questionnaire called for only the total acres irrigated in 1954. For the 17 conterminous Western States and for Arkansas, Florida, and Louisiana, the published data included the total land in farms reporting irrigation, the land in farms classified by use, and, except for Arkansas and Louisiana, the irrigated portion of land in farms classified as to whether an irrigated crop had been harvested or the land had been used for pasture only. For these 20 States, data for irrigated and non-irrigated crops were published. For the other 28 States, the published data for irrigation were limited to the farms reporting and the total acres of land irrigated. (See Volumes I and II of the 1954 Census of Agriculture reports for all published data gathered on the 1954 questionnaire.) Because of increasing interest in the subject of irrigation in the humid areas, a special survey in cooperation with the United States Department of Agriculture was made in 1955 in the 28 Eastern States. (See Part 6 of Volume III, Special Reports, 1954 Census of Agriculture, for the kind of information gathered.)

Legal basis for the 1959 Censuses of Agriculture and Irrigation.—The 1959 Censuses of Agriculture and Irrigation were authorized by an Act of Congress, as were all similar prior censuses. "Title 13, United States Code—Census," codified in August 1954, and amended in August 1957 and September 1960, is now the legal basis for censuses of agriculture and other censuses, and surveys conducted by the Bureau of the Census. Section 142 paragraph (a) made provision for a census of agriculture and paragraph (b) for a census of irrigation. These sections read as follows:

- "142. Agriculture, Irrigation, and Drainage.
- (a) The Secretary shall, beginning in the month of October 1959, and in the same month of every fifth year thereafter, take a census of agriculture, provided that the censuses directed to be taken in October 1959 and each tenth year thereafter, may, when and where deemed advisable by the Secretary, be taken instead in conjunction with the censuses provided in Section 141 of this title. (Section 141 relates to the decennial censuses of population, unemployment, and housing to be taken as of the first day of April of each decennial year.)
 - (b) The Secretary shall, in conjunction with the census of agriculture directed to be taken in October 1959 and each tenth year thereafter, take a census of irrigation and drainage."

PRESENTATION OF STATISTICS

The principal purpose of this report is to present all of the available data obtained in the 1959 Census of Irrigation. However, many of the data obtained in the 1959 Census of Agriculture are included so as to furnish more complete data not only for the Western States but also to bring together in one volume most of the data for all States and for the United States. This report also presents data obtained in previous censuses, both those for the census of irrigation and for the census of agriculture. Generally, the data from only one of these censuses are presented in a table. However, in a few cases, data from both censuses are in the same table.

Census of agriculture data.—Data from the census of agriculture are provided to indicate the extent of irrigation and to provide measures of the use of irrigation water for the production of various farm products. Summary table 1 shows, for each of the 50 States, exclusive of Alaska, the number of irrigated farms and the total area irrigated for the censuses of 1959, 1954, and 1950. Summary table 2 shows, for each of the 17 conterminous Western States and Louisiana, a classification of the land in farms according to use, as obtained in both the 1959 and 1954 censuses. Additional data are given for those farms, in each State, which reported all harvested crops as having been grown under irriga-

tion. Figures are given in summary table 2 for the two groups of irrigated farms (1) those which used any irrigation water and (2) a smaller but significant total for farms on which all crops were harvested from irrigated land.

A full analysis of census-collected irrigation data must take into account the kinds of individual crops to which water was applied; the proportion of the total acreage of each crop which was irrigated; the proportion of the total production which was grown under irrigation; and the average yields obtained with and without irrigation. Such data are given in summary tables 4 and 5. The first of these, summary table 4, provides a summarization by the kind of crops harvested in 1959 for 18 irrigation States, with available comparable totals for crops harvested in 1954. Figures are given, for many of the principal crops harvested, showing the number of farms which irrigated the entire acreage of a crop, with its acres, production, and value of production. These figures represent totals for farms on which all the crop harvested was irrigated.

The data for irrigated crops presented in summary table 4 do not represent the total acreage of the various crops irrigated. The data relate only to the acreage and production of crops on those farms on which the entire acreage of the crop harvested was irrigated. For example, if the total acreage of corn harvested on a farm were 40 and all 40 acres were irrigated, then the entire 40 acres of corn was included in the total for irrigated. However, if only 10 out of the 40 acres of corn harvested were irrigated, then the totals given in summary tables 4 and 5 do not include the 10 acres of corn irrigated. In such cases, the entire 40 acres of corn was included in the total for nonirrigated. However, data are given in summary table 3 showing the total acreage of each crop irrigated on farms where only part of the acreage in a crop was irrigated.

Census of agriculture data, as to total acres irrigated and acres irrigated from ground and surface sources, are included in summary tables 11 and 12 and in summary table 9.

Data for the census of irrigation are presented by States and by drainage basins. In some tables, data are presented by drainage basins within States. In the presentation of data when only a few organizations were serving within a State, State totals only are given. If only a few irrigation organizations operated in a given drainage basin, totals for the area are not shown separately but are combined with those for another basin. Somewhat similar procedures are followed in the presentation of data by type of organization or size of organization measured by total acre-feet of water conveyed.

The tables for individual States present data, on an intrastate basis, for each separately delineated drainage basin within a State. These basins may be minor basins, or submajor basins depending on the extent to which drainage basins within a State have been delineated for the purpose of presenting data. Totals are given for each grouping of basins into the next larger drainage basin unit and for the State. The tables containing totals for the

18-State area present data for larger drainage basin units on an interstate basis. Submajor drainage basins are the smallest unit for which data are shown. In both intrastate and interstate tables, if there were less than 3 organizations in one or more of the basins, combinations of the data were made so that the two basins together made a fairly homogeneous unit. In the intrastate tables for Colorado, data are given separately for the north and south parts of submajor basin IV-D.

Other published data.—Volume 1 of the reports for the 1959 Census of Agriculture contains for each State and for each county, detailed data on irrigation as follows:

County Table 1a.—Number, acreage, land in farms classified by use, acreage irrigated by sprinklers, irrigated farms classified by acres irrigated, and land irrigated by source of water.

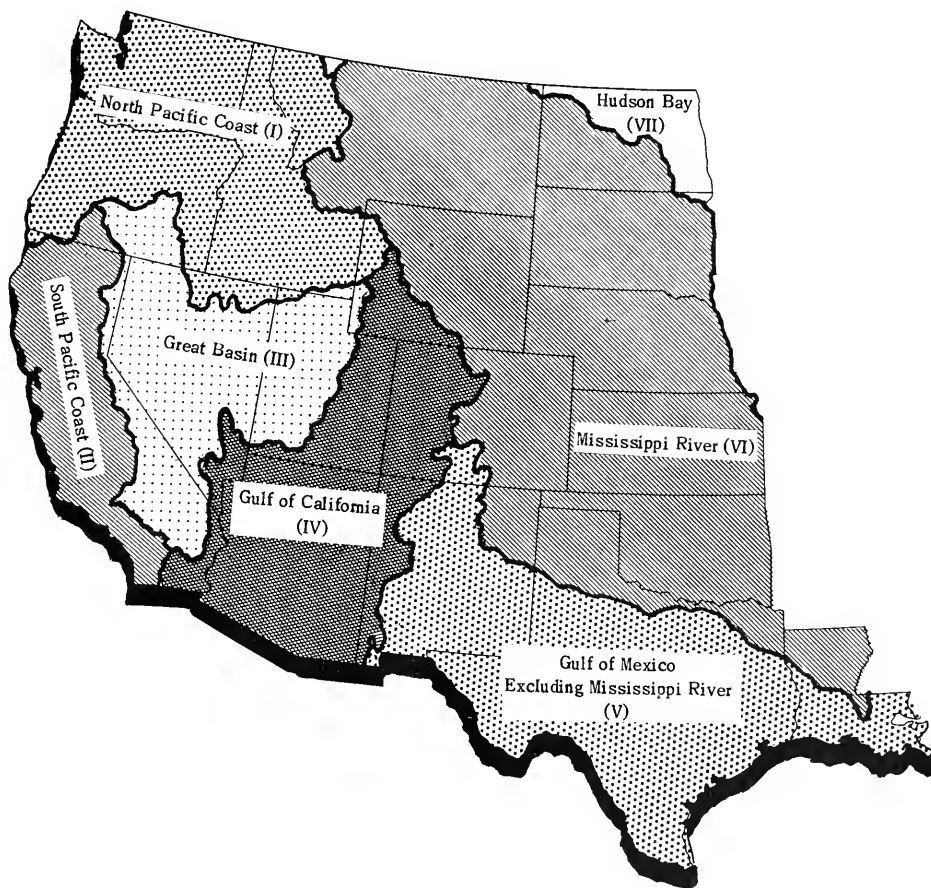

County Table 11a.—Farms reporting, acreage, and quantity of crops harvested from irrigated land. Figures are given for acres and quantity harvested for farms for which the entire harvested acreage of the crop was irrigated. For farms on which only part of the harvested acreage of the crop was irrigated, figures are given for farms reporting and acres, but not for quantity harvested.

Census of irrigation data.—Census of irrigation data are presented for the States covered by the 1959 Census of Irrigation, i.e., for the 17 conterminous Western States, and Louisiana. Data are not given separately for Oklahoma, as only two irrigation organizations were recorded in that State. To avoid disclosure of individual operations, Oklahoma figures have been combined with those for Kansas.

Drainage basin data provide the basis for a comprehensive analysis of irrigation organizations and their characteristics and development as well as measures of the relative importance of the principal streams as sources of water supply. Therefore, the statistics were assembled by drainage basins, and such geographic areas are extensively utilized herein for data presentation. Since drainage basin boundaries do not usually coincide with State lines, figures may be presented either on an intrastate or an interstate basis. Some tables contain data compiled on both bases. Since the irrigated area in a drainage basin may have received water from another drainage basin, data are shown in three of the tables regarding the interbasin transfers of water.

For convenience of reference, the drainage basins by which the data are presented have been identified in the tables and on the maps by a uniform system of symbols. Major drainage basins are designated by Roman numerals, submajor basins (subdivisions of the major drainage basins) by capital letters, parts or tributaries of the submajor basins by Arabic numerals, and further subdivisions by small letters. Thus, the number II-D 5c represents the drainage basin of the Yuba River (subminor basin c) which is part of the drainage area of the Feather River (minor basin 5) which is a tributary of the Sacramento River (submajor basin D) which is part of the South Pacific Coast drainage basin (major basin II). Parts of basins designated as the basin "direct" include tributaries not shown separately.

LOCATION OF MAJOR DRAINAGE BASINS IN THE 17 WESTERN STATES AND LOUISIANA

LOCATION OF SUBMAJOR DRAINAGE BASINS FOR WHICH INTRASTATE TABLES ARE PRESENTED

LOCATION OF SUBMAJOR DRAINAGE BASINS FOR WHICH INTERSTATE TABLES ARE PRESENTED

Maps showing irrigated areas by drainage basins.—There is a series of maps available for each of the 17 Western States and Louisiana. These maps are approximately 3 feet by 4 feet in size and were prepared on a scale of about 16 miles on the ground to 1 inch on the map. These show the location of irrigated land by counties and by drainage basins and the acres irrigated by source of water, either ground or surface. One overall map, showing similar data for all of the 18 States, is also available. The acreage shown as irrigated within a drainage basin may not have received all of its water from sources within that basin as water from one basin may have been diverted and used in another basin.

The data used in the preparation of the maps for 1959 were obtained from both the census of irrigation and the census of agriculture. All figures for acreage are from the census of agriculture. The allocation of the acreage irrigated from organization sources between surface- and ground-water sources was made on the basis of the percentage of the water received in the

drainage basin, by all organizations, which came from ground and surface sources.

The number of dots for the State maps were calculated for each minor civil division or other county subdivision. The dots were plotted within the subdivision after an examination of United States Geological Survey topographic maps, maps of the Bureau of Reclamation projects, enumerator maps, and any other available information indicating the location of the irrigated land. After plotting, the dots were counted by drainage basins to determine the irrigated acreage from each water source for each drainage basin.

The acreage irrigated for counties having less than 500 acres irrigated is not shown on the maps. However, the table printed on the map does provide totals for the irrigated acreage in each drainage basin even though the data are not shown on the map for all counties.

In order that the figures presented for drainage basins may be more easily understood, three maps are given to show the general plan of both data and map presentation. One map shows the location of the major drainage basins in the 17 conterminous Western States and Louisiana. The second map shows the submajor drainage basins for which intrastate tables are presented and the third map shows the submajor drainage basins for which interstate tables are presented.

Identification of drainage basins.—The major and submajor basins and map symbols are as follows:

ENUMERATION FORMS AND PROCEDURES

Introduction.—The primary purpose for the formation of an irrigation enterprise, organization, or system is to obtain water from natural sources and deliver it to water users. Under a broad interpretation, a system could include a formal or informal co-operative undertaking or a single enterprise. Water may come from ground sources or from surface sources. In many areas it is necessary to store water from melting snow or winter rain in order to have a more adequate supply during the growing season.

Most commonly, the water is stored in a reservoir behind a dam built across the stream which furnishes the water. Occasionally, a more economical location for water storage is off the stream which supplies the water and an off-stream reservoir has been constructed.

Medium and large-size irrigation systems will necessarily have one or more main canals or pipe lines to convey water to the area to be served, commonly using gravity flow. Main canals may deliver water to smaller canals, usually called laterals, which carry the water to a group of water users located along the lateral.

Many enterprises which deliver water for the irrigation of farm and ranch land perform other functions. These may include the generation of electric power, flood control, artificial drainage of lands, and the delivery of water for other uses. These other uses may be divided into two groups. The first group includes: Domestic and residential users, including lawn and garden watering; municipal water supply; water for industrial purposes; livestock watering; and water spreading for the recharge of ground-water supplies. The water involved in these uses and for the irrigation of farm and ranch lands must be taken from streams or other natural sources. These are the uses for which information was obtained in a census of irrigation, on water delivered by irrigation enterprises.

The other group of water uses for which water is delivered includes power generation, streamflow regulation for navigation, waste dilution, and for fish and wildlife. The water involved in this group either is not taken out of streams or, after diversion, is returned without any substantial loss in quantity. The census of irrigation has not been concerned directly with this second group of water uses.

The 1959 Census of Irrigation was concerned with finding out the amount of water taken from natural sources by irrigation organizations; accounting for the transfers between the organizations which had a part in water conveyance or delivery; and determining how much was delivered to farms, how much was lost along the way, and how much was delivered for uses other than irrigation of farm and ranch lands. The 1959 Census of Irrigation did not ascertain data in respect to the conveyance loss and use of water by an individual farmowner or operator.

The various organizations which depend on one another for the receipt or delivery of water are referred to as "related organizations." They may be quite independent in ownership and management, but they are related in the sense that water is transferred from one organization to another as it moves from its source to the individual user. These related organizations present special problems in their enumeration. An organization which operates facilities in more than one drainage basin also presents problems for enumeration.

In the period since the first census of irrigation there have been changes in the techniques and organization of irrigation water supply, in the kind of information needed, and in the type of data which can be reliably and economically obtained by census procedures. In recognition of such changes, each census has incorporated some modifications from its predecessor. The 1959 forms and procedures and the major changes made for the 1959 Census of Irrigation as compared with that of 1950, are outlined in this section. The effect of these changes will be indicated in more detail in the section on "Definitions and Explanations."

Organizations included.—For 1959 Census of Irrigation, an irrigation organization was defined as a group of two or more water users, a company, or a governmental district or agency that operated facilities to supply water for irrigation of farm and ranch lands. It may have been either a formal, legal organization or an informal or cooperative arrangement. The facilities of an organization were not required to supply water directly to farms but the water stored or conveyed had eventually to serve 2

or more farms. The organizations enumerated in 1959 correspond closely to the "multiple-farm enterprises" for the 1950 census.

In the 1950 and earlier censuses of irrigation, special questionnaires were also obtained for those farms which operated their own supply works to bring water to the farm, either from natural sources or from a canal or pipeline of an irrigation organization (if located more than a mile from the farm boundary, or if a pump were required to lift the water from an irrigation canal to the farm). The 1950 questionnaire did not, however, cover the process of conveying and distributing the water on the individual farm. Thus, a farm which operated a pump to lift water from an irrigational canal was regarded as an irrigation enterprise for the supply of water to two or more farms, and a special questionnaire was obtained. But a farm which received water by gravity from a canal was not regarded as an irrigation enterprise, even though it may have operated expensive works for the distribution of water on the farm.

Elaborate facilities for distributing and applying irrigation water on the farm are now more common than when the first census of irrigation was taken, and thus there has been an increasing investment by farmers in land leveling, distribution systems, sprinklers, etc. From the point of view of the farm economist or the equipment supplier, the facilities for the conveyance and application of water on the farm may be as important as those operated to bring water to the farm. This fact has influenced the kind of information collected in the census of irrigation. It has become more difficult for farmers and census enumerators to report cost and other information for works operated to bring water to the farm, separately from that for facilities for distribution and application on the farm. This is especially true when the same pump is used to obtain water from a well or canal and also to provide pressure to pipelines or sprinklers on the farm. However, the inclusion of on-the-farm-irrigation operations in the census of irrigation would greatly increase the cost of data collection. In 1950 the collection of 298,000 questionnaires would have been required for coverage of irrigation facilities on all irrigated farms in the 20 States. Because of costs, data on irrigation facilities on individual farms were not collected in connection with the 1959 Census of Irrigation.

As a result of the exclusion of irrigation enterprises providing water to only one farm from the 1959 census, the definition of water delivery by multiple-farm irrigation enterprises directly to farms was altered for application in 1959. In the 1950 census, if a farm operated more than a mile of canal, or if it used a pump to bring water to the farm from a canal or pipe operated by a multiple-farm irrigation enterprise, then the farm-operated supply works were considered to be an irrigation enterprise apart from the farm itself. In such a case the multiple-farm enterprise was not considered to deliver water directly to a farm but rather to another irrigation enterprise (a single-farm enterprise) which in turn delivered water to the farm. In 1959, however, any delivery by a multiple-farm enterprise to works operated by a single farm was considered to be water delivered directly to a farm.

Because the 1959 Census of Irrigation was confined to irrigation organizations, omitting individual farm water supply systems, Arkansas and Florida, which have few irrigation organizations, were not included in the census. These two States were included in the 1960 Survey of Irrigation in Humid Areas.

Questionnaires.—Three questionnaires, designated I-1, I-2, and I-3, were used to enumerate irrigation organizations in the 1959 Census of Irrigation. Each of these asked for essentially the same kind of information. They differed only in their adaptation to the peculiarities of the type of organization each was designed to enumerate. The I-1 form was used to enumerate organizations which operated facilities within one drainage basin and neither received any water from another organization nor

delivered water to another organization. The I-2 questionnaire was used to cover the operations of those organizations which operated facilities entirely within one drainage basin but which obtained part or all of their water from another organization and/or delivered part or all of their water to another organization. The I-3 reporting form was utilized to enumerate organizations which operated facilities in more than one drainage basin and also to enumerate some organizations which operated large off-stream reservoirs. (Facsimile copies of these three questionnaires are included in the appendix.) Whenever irrigation water was transferred in canals, pipes, or tunnels from one drainage basin to another, the organization in whose facilities it crossed the boundary was considered as an interbasin organization.

The questionnaires contained inquiries to ascertain the legal type of organization; the number of water users served—farm, residential, and others; the number of acres served and the number of acres actually irrigated; the amount of water obtained by source; the amount of water disposed of by type of disposition; whether or not the land served by the organization received water from other sources; and the amount of new capital investment since 1950. Other questions were included, some of which enabled the enumerators to determine whether or not the organization reporting met the definition of an irrigation organization, and some of which gave information useful in the checking of other data reported on the questionnaires.

The I-1 questionnaire did not include inquiries for reporting deliveries of water to other organizations, although it did include questions to determine whether or not such deliveries should have been reported. The I-1 questionnaire also made provision for the respondent to report water quantities in units other than acre-feet. The respondent could report either in volume units or flow units in accordance with the way he kept his records or was accustomed to measuring water.

The I-2 questionnaire did provide inquiries to ascertain inter-organization transfers. A separate worksheet was furnished the enumerator for use in making entries on the I-2 questionnaire in converting water quantities reported in volume units other than acre-feet, or in flow units, to acre-feet.

The I-3 questionnaire used for the enumeration of all interbasin organizations, provided for the accounting of all water obtained and disposed of by drainage basins. Transfers between basins were reported. The I-3 questionnaire was also used to enumerate organizations which reported the use of off-stream storage.

The questionnaires for the 1959 Census of Irrigation were prepared by the Bureau of the Census. Two special committees provided advice and counsel. A Special Federal Agency Committee, for the 1959 Censuses of Irrigation and Drainage, comprised representatives of the following United States agencies: Agricultural Conservation Service, Agricultural Research Service, Rural Electrification Administration, and Soil Conservation Service of the United States Department of Agriculture; and the Bureau of Indian Affairs and the Bureau of Reclamation of the United States Department of the Interior.

A second committee, the Special Advisory Committee for the 1959 Census of Agriculture, reviewed the later stages of the planning. This committee consisted of one representative from each of the following: Agricultural Publishers Association; American Association of Land Grant Colleges and State Universities; American Farm Bureau Federation; American Farm Economic Association; American Statistical Association; Farm Equipment Institute; National Association of Commissioners, Secretaries, and Directors of Agriculture; National Council of Farmer Cooperatives; National Farmers' Union; National Grange; Rural Sociological Society; and the U.S. Department of Agriculture. A representative of the Bureau of the Budget was in attendance at all meetings of this committee.

Enumerator drainage basin maps.—Inasmuch as census data were to be published by drainage basins, it was important that the drainage basin location of each irrigation organization be determined. Each enumerator was supplied with a set of county highway maps for his enumeration area, on which the boundaries of the drainage basins had been traced. Each drainage basin was given a code number. The 1950 drainage basin location of each organization was provided to the enumerator on his control list of organizations. As each organization was enumerated the drainage basin location was checked on the maps. Steps, which will be described later, were taken during the processing operations to provide the drainage basin location of organizations submitting reports by mail.

The enumeration.—The enumeration of the irrigation organizations, for the 1959 Census of Irrigation, was accomplished during December 1959, and January, February, and March 1960. The reports covered water supply activities during the 1959 calendar year. In case water was delivered in the winter months, and the organization's records were kept on a fiscal year basis, the fiscal year figures were accepted if the fiscal year ended within three months of the end of the 1959 calendar year. Data pertaining to the expenditures for works and equipment were reported for the ten-year period, January 1, 1950, through December 31, 1959.

Prior to the beginning of the enumeration, lists of irrigation organizations were compiled from the records of the 1950 census and from information supplied by the Bureau of Reclamation, Bureau of Indian Affairs, and various State agencies. The organizations were classified, on the basis of available information, into interbasin organizations, interrelated organizations, and nonrelated organizations. Interbasin organizations included those with operations in more than one basin, interrelated organizations comprised those that received or delivered water to another organization, and unrelated organizations included all other organizations. The classification of individual organizations was made usually on the basis of information obtained from the 1950 questionnaires.

Questionnaires were mailed to the nonrelated organizations with a letter requesting that they be filled out and returned to the Agriculture Operations Office of the Bureau of the Census in Parsons, Kansas. Questionnaires were also mailed to interrelated and interbasin organizations to give these organizations advance notice of the enumeration and allow them sufficient time to prepare the information for their reports before an enumerator called.

The area of the 18 States in which the irrigation census was conducted, was divided into 80 enumeration districts in accordance with the number of organizations to be enumerated, the distribution of the organizations, and travel conditions in the area. Approximately 80 enumerators were selected from among the crew leaders, who had worked on the 1959 Census of Agriculture. These enumerators were given a two-day training course in irrigation enumeration procedures and in the use of the irrigation questionnaires.

Each enumerator was given a "field control card" for each organization to be enumerated in his area. These control cards included those for all the interrelated organizations and also those nonrelated organizations which had not submitted a report by mail.

The enumerators were instructed to enumerate all the interrelated organizations in their area, including any unlisted organizations which might be related to organizations they enumerated, except interbasin organizations. Each enumerator was notified of the receipt, by mail, of completed questionnaires from the nonrelated organizations in his area. He was instructed to enumerate all organizations for which he had not received such a notice.

Three special enumerators were recruited for the enumeration of all interbasin organizations. These enumerators were agriculture economists from the Land and Water Branch of the Farm Economics Research Division, Agriculture Research Service, U.S. Department of Agriculture. They were trained by the irrigation economist in charge of the census of irrigation.

Reports for projects operated by the Bureau of Reclamation and the Bureau of Indian Affairs of the Department of the Interior were prepared by the respective bureaus.

Special provision was made to insure the enumeration of irrigation organizations not on any control list. Each farm operator who received irrigation water from an irrigation organization was asked, on the 1959 Census of Agriculture questionnaire, to report the name of the organization or organizations from which water was received. During the processing of the census of agriculture questionnaires, a transcription card was prepared the first time each organization's name appeared. These cards were checked against the listing of the organizations supplied to the enumerators. Reports for unlisted organizations were obtained either by mail or by the enumerators.

PROCESSING OPERATIONS

Completion of enumeration.—As irrigation questionnaires were received by mail from the irrigation organization in the Agriculture Operations Office in Parsons, Kansas, the date of receipt was posted on the control list for irrigation organizations. Likewise, as an enumerator completed his assignment in a county, he forwarded the completed questionnaires to the same processing center. A check was then made of the control list for the county to ascertain the degree of completion of the enumeration in the county.

Preliminary checking.—All irrigation questionnaires, whether received directly from irrigation organizations or from enumerators, were subjected to a preliminary checking to determine whether or not they were satisfactorily filled. To be considered satisfactory, dependance was placed primarily on the extent to which "quantity of water" information was furnished in relation to the number of acres served by the organization. If the organization served less than 500 acres, its report was considered satisfactory when the number of acres irrigated and the number of farm water users was reported and the source of water indicated. If the organization served 500 or more acres, its report was considered satisfactory only if the actual quantity of water obtained was reported or if the report contained information which would make possible a reasonably accurate estimate of the quantity of water. The questionnaires of interrelated organizations were checked to make sure the interorganization transfer quantities were in reasonable agreement.

Questionnaires which were considered unsatisfactory were returned to the enumerator with a memorandum containing instructions for obtaining the additional information needed.

Editing and coding.—Each questionnaire was edited and coded before the information was transferred to punchcards and tabulated. The questionnaires were arranged for editing into 3 groups—nonrelated, interrelated, and interbasin.

Questionnaires which did not represent an irrigation organization in accordance with the census definition were eliminated. Questionnaires eliminated included those reporting organizations providing water to less than 2 farms, reports for organizations serving only residential water users, and reports for organizations which did not operate water supply facilities in 1959.

In the editing process, all questionnaires were examined for errors, omissions, and inconsistencies. Among the specific items subjected to checking were the following:

a. Farm water users served: The relationship between number of farm water users, the acres served, the area irrigated, and the quantity of water delivered were checked to be sure they were reasonable.

b. Residential or other water users served: The number of residential or other water users was checked with the quantity of water delivered to see that the relationship was reasonable.

c. Water obtained and disposed of: Checks were made to insure that the quantity of water received was equal to the quantity of water disposed of.

d. Conveyance loss: A report regarding conveyance loss was necessary unless a satisfactory explanation was given as to why there was no conveyance loss.

Obvious errors in calculations and in units of measure and misplaced entries were corrected as found. Entries not clearly legible were rewritten. Questionnaires containing major inconsistencies and omissions were referred to irrigation technician for review. The technician corrected the questionnaires, either on the basis of information reported for other organizations in the area or on the basis of additional information received in response to letters directed to the organization.

A water quantity reported in a unit, other than acre-feet, was converted to acre-feet. Estimates for quantity of water were made when required for organizations which reported less than 500 acres of land irrigated. These estimates were made on the basis of information reported for other organizations of similar type in the area. In the case of the interrelated organizations, interorganization transfers of water were compared and discrepancies corrected. Discrepancies of less than 300 acre-feet between reports of two interrelated organizations were corrected by the clerks, in accordance with the following rules:

1. If only one organization reported the transfer of water, the transfer was cancelled and the other figures in the questionnaire were adjusted to make water obtained equal to water disposed of.

2. If both organizations reported the transfer but the amounts differed by a quantity of less than 300 acre-feet and one of the organizations reported measuring its water while the other did not, the report of the organization making measurements was accepted. If neither organization measured the water, each report was adjusted by an amount equal to one-half the difference.

Discrepancies between the reports of two interrelated organizations of 300 or more acre-feet, for water transferred, were referred to an irrigation technician. Discrepancies of 300 to 999 acre-feet were corrected by the technician on the basis of other information on the questionnaires. In all cases of discrepancies of 1,000 acre-feet or more, letters were sent to the respondents of both organizations pointing out that a discrepancy did exist although not revealing the quantity and asking that the reported figures be reviewed, and any necessary corrections be made. In nearly all cases the replies to these letters contained information which made possible the correction of the two reports.

The drainage basin location of organizations which reported by mail was supplied on the basis of information from the 1950 irrigation questionnaires. For organizations which were not enumerated in 1950, or for which there was any question about the drainage basin in which located, the information given on the questionnaire as to the location of the sources of water, or the land irrigated, was checked against the drainage basin maps to determine the drainage basin in which the organization was located.

The questionnaires of all interbasin organizations were edited and coded by irrigation technicians, in accordance with the same rules used for questionnaires for interrelated organizations. To facilitate tabulations, a questionnaire was prepared for each basin. Thus, if an organization operated in three drainage basins, three questionnaires were prepared, one for each basin in which it operated.

During the coding operation each irrigation organization was assigned a code to indicate (1) drainage basin in which located, (2) the legal type of organization, (3) whether or not water from other sources was used on the same land served by the irrigation organization, and (4) the amount of water delivered to farm users per acre irrigated by the organization.

Tabulation of data.—After the questionnaires were edited and coded, the information was punched into tabulating cards. One card only was required for each questionnaire. A tabulation was made for each individual drainage basin. Totals were obtained for the additive information on the cards for each drainage basin. This tabulation was examined by the irrigation technician for reasonableness and consistency. After the review and correction of this tabulation another tabulation was made, by type of organization for submajor drainage basins and States. This tabulation was reviewed for reasonableness and consistency, before the remaining tabulations were made.

DEFINITIONS AND EXPLANATIONS

The definitions and explanations which follow relate mostly to those 1959 items considered to be inadequately described in the tables.

Irrigation defined.—The term "irrigation," as herein used, refers to the application of water, by artificial means, to land being used for agricultural purposes. These artificial means include subirrigation as well as application of water to the ground surface either by general flooding, by basins, and by furrows, or less directly through the use of sprinklers.

Irrigated land.—Irrigated land includes any land in farms (and ranches) to which water was applied in the year covered by the enumeration. Irrigation may have been used for producing a harvested crop, for pasture or grazing lands, for cultivated summer fallow, or for land planted to a crop intended for future harvest. Land flooded for rice cultivation was considered as irrigated. Land flooded during high water periods was to be included as irrigated only if water was diverted to agricultural lands by dams, canals, or other works. The definition of irrigated land specifically excluded land where the water table or the natural level of the ground water was controlled by drainage works with no additional water brought in by canals or pipes.

Census definition of a farm.—For the 1959 Census of Agriculture, the definition of a farm was based primarily on a combination of "acres in the place" and the estimated value of agricultural products sold.

The word "place" was defined to include all land under the control or supervision of one person or partnership at the time of enumeration and on which agricultural operations were conducted at any time in 1959. (For definition of "agricultural operations," see p. ix of the Introduction to volume II of the reports for the 1959 Census of Agriculture.) Control may have been exercised through ownership or management; or through a lease, rental, or cropping arrangement.

Places of 10 or more acres in 1959 were counted as farms if the estimated sales of agricultural products for the year amounted to at least \$50. Places of less than 10 acres in 1959 were counted as farms if the estimated sales of agricultural products for the year amounted to at least \$250. Places not meeting the minimum estimated level of sales in 1959 were nevertheless counted as farms if they could normally be expected to produce agricultural products in sufficient quantity to meet the requirements of the definition. This additional qualification resulted in the inclusion as farms of some places that were engaged in farming operations for the first time in 1959, as well as places affected by crop failure or other unusual conditions.

Land in farms according to use.—Land in farms was classified according to the use made of it in 1959. The acreage in each farm was allocated among the various land-use categories only once, and any acreage that had two or more uses during the year was classified according to its most important use.

Cropland harvested.—This includes land from which crops were harvested; land from which hay (including wild hay) was cut; and land in small fruits, orchards, vineyards, nurseries, and greenhouses. Land from which two or more crops were harvested was to be counted only once. The entry for cropland

harvested was obtained directly from the farm operator and then verified by the census enumerator by adding the acreages of each crop reported and subtracting from this total the acres of land from which two or more crops were harvested. This checking was repeated during the office processing for farms with 100 or more acres of cropland harvested. The enumerator was directed to list only under "Cropland harvested" any acreage that had additional uses during the year. For instance, any land from which hay was cut was classified as cropland harvested, regardless of the use of land for grazing later in the year.

Cropland used only for pasture.—The enumerator was instructed to include all land used only for pasture or grazing that could have been used for crops without additional improvement, and all land planted to crops that were hogged off, pastured, or grazed before reaching maturity. In the census of 1954 the enumerators were instructed to report rotation pasture and all other cropland used only for pasture as cropland used only for pasture.

Cropland not harvested and not pastured.—This class includes cultivated summer fallow, cropland used only for soil-improvement crops, land on which crops failed, land planted to crops for harvest after the year covered by the census, and idle cropland. The data for this class for 1959 were obtained through the use of two inquiries in some States and three in other States as follows:

Cultivated summer fallow.—This land use was obtained for the 17 Western States in the contiguous United States. The acreage of cultivated summer fallow is negligible in those States where the inquiry was not included on the questionnaire. For the censuses of 1959, 1954, and 1950, cultivated summer fallow was defined as cropland that was plowed and cultivated but left unseeded to control weeds and conserve moisture. Separate data are not available for 1945 and earlier censuses.

Cropland used only for soil-improvement crops.—Only land used for cover crops, to control erosion or to be plowed under for green manure and planted to another crop, fell into this category. A large proportion of this land was covered by contracts of the Soil Bank. The enumerator was cautioned not to include land from which crops were harvested in the census year or land that was pastured or grazed. There was no separate inquiry for Alaska and Hawaii. In these two States cropland used only for soil-improvement purposes was included under other cropland not harvested and not pastured.

Other cropland not harvested and not pastured.—All cropland except cropland harvested, cropland in cultivated summer fallow, cropland pastured, and land used only for soil-improvement crops was included in this land-use class. This total included all acreage on which crops failed because of drought, floods, insects, etc.; acreage not harvested because of low prices or labor shortage; acreage not harvested but occupied by growing crops intended for harvest in later years; acreage which had been plowed, and could be plowed again without first clearing away brush, but which had been idle for one or more years.

Woodland pastured.—This includes all woodland that was used for pasture or grazing during the census year. According to instructions, woodland refers to woodlots and timber tracts, natural or planted.

Woodland not pastured.—The enumerator was instructed to include in this category land in the Soil Bank planted to trees.

Other pasture.—All land, other than woodland and cropland, used for pasture or grazing was designated other pasture.

Improved pasture.—A pasture that had been limed, fertilized, seeded, irrigated, drained, or cleared of weeds or brush was to be considered improved pasture.

All other land.—This item refers to all land not included in any of the preceding land-use items and includes land occupied by a house or other buildings; lanes, roads, and ditches; and land area of ponds and wasteland. Unusually large tracts of other land held primarily for purposes other than agriculture were excluded from the tabulations.

In summary tables 6 and 11, the "total acres irrigated in census year" is shown for 1959 and 1949. The 1959 data were obtained in the general census of agriculture while those for 1949 were obtained in the 1950 Census of Irrigation. The most useful comparison of drainage basin totals was made possible only by using data from the two sources. Data in respect to the number of irrigated farms and acreage of irrigated land collected in the census of agriculture are more accurate than those collected in the census of irrigation. The 1950 Census of Agriculture data were not apportioned to drainage basins. However, the 1950 Census of Irrigation acreages, through a process of reconciliation,

were brought into reasonable agreement with the 1950 Census of Agriculture irrigated acreage. (See page XXIV for a discussion of the method used in 1950 to reconcile census of irrigation data with similar data gathered in the census of agriculture. See also "Area reported irrigated by organizations" on page XXI.) The State totals for 1959 correspond with those reported in volume 1 of the reports for the 1959 Census of Agriculture.

Irrigated farms.—All farms with any land irrigated in 1959 are counted as irrigated farms. The extent of irrigation on any particular farm could have ranged from an adequate and timely supply of water for all crops and pasture to an inadequate supply of water with the result that the crop irrigated was not worth harvesting or it was harvested for a purpose different than the purpose for which it was planted.

If, from the total number of irrigated farms, as shown in summary table 1, the number of farms reporting irrigated cropland harvested is subtracted, the resulting difference represents those irrigated farms which had no irrigated harvested crops. These farms could have had irrigated pasture (any kind of pasture land which was not used for crop production in the census year), land planted to an irrigated crop intended for future harvest, land in cultivated summer fallow, land which was irrigated in the census year and was being prepared for seeding a crop for harvest in a later year, and land in a crop which was irrigated in the census year but which was a complete failure.

Irrigation organization.—An irrigation organization is a business comprising a group of two or more water users, a company, a corporation, or a governmental district or agency that operates facilities to supply water for the irrigation of farm and ranch lands. It may be either a formal, legal organization or an informal or cooperative arrangement. To be included in the census of irrigation two or more farm water users had to be served by the water which was stored or conveyed by the facilities of an organization but these water users did not have to be served directly. Thus, if a storage reservoir released water into a stream channel which was picked up downstream by another organization which served two or more farms, the organization which owned the reservoir qualified as an irrigation organization. Likewise, if all the water of one organization was received into facilities of another organization, both were included as irrigation organizations provided two or more farm water users were served. In the first example, the reservoir would be included as an organization which did not convey water.

An organization was included in the census, if any of the water stored or conveyed in its facilities was used for farm irrigation even though irrigation was not the main purpose of the organization. Organizations which did not operate water supply works, in 1959, because of water shortage or other reasons were not included.

An irrigation system operated by a single farm primarily to supply water for that farm was not counted as an irrigation organization, though it may have supplied water to one or more other farms. (In 1950, a total of 105,254 single-farm irrigation enterprises were reported in the 18 irrigation States, and they supplied water to 7,125 other farms.) However, if a ditch, pump, or other works which supplied water to two or more farms (or water users) was operated as a cooperative undertaking of two or more farmers or water users, it was included as an irrigation organization. The determination as to whether a small irrigation system serving two water users is operated by one of them or by both jointly is difficult in some cases, particularly if the two water users have such relationships as landlord and tenant, or father and son. The determination of whether the persons providing water to two or more water users qualified as an irrigation organization may not always be made in a uniform basis from census to census; and thus, part of the change in the number of irrigation organizations may be the result of differences in determination of whether the organization meets the criteria

for inclusion in the census of irrigation. Changes in the number of organizations from census to census may arise from changes in the number of farm operators for the same land irrigated without any change in water supply facilities. For example, an irrigated tract of land may comprise three farms for one census and only one farm at another census because of the consolidation of farms.

Only organizations which divert, pump, store, or convey water used, at least in part, for irrigation are included. Water-user organizations which provide information or technical assistance and which represent the interest of water users, promote water development, etc., but do not operate any water supply facilities are excluded.

Many of the larger irrigation organizations deliver water by main supply canals to lateral ditches which are maintained by the water users served. The water users on each lateral may be more or less formally organized to perform any maintenance work required, or to hire such work performed. In some areas, it is the custom for each water user, individually, to maintain the portion of the ditch adjoining his property, without any joint action by the water users as a group. In most cases payments to the main supply organization are made by the water users individually, while in others a lateral organization makes the payment. The instructions to enumerators in 1959 provided that a group of water users operating a lateral ditch were to be counted as a separate organization if either (a) water was obtained from more than one source—that is, from another organization, or directly from a natural source as well as from another organization—or (b) the group collected payments from water users. If all water was obtained from another organization, and no cash payments were collected by the lateral, then the lateral was not to be considered as a separate organization and the water users and land were considered to be served directly by the organization from which the water was obtained.

The procedure for counting laterals did not affect the total acreage reported as irrigated by irrigation organizations although, in some areas, it may have affected significantly the number of mutual unincorporated organizations counted and the acreage served directly by each type of organization. If an irrigation district supplied water to laterals operated as unincorporated mutual organizations, the water users and land were tabulated as served directly by mutuals. If the laterals did not qualify as separate irrigation organizations, however, the water users and land were considered to be served directly by the irrigation organization delivering the water. These same criteria for the enumeration of laterals were generally followed for the 1950 census.

The definition of "irrigation organization" used for the 1959 census is essentially the same as that of "multiple-farm enterprise" used in the 1950 census.

Farm area reported served by organizations.—Farm area served is defined as the area for which farm water users were entitled to receive water in 1959. Land which may have been irrigated in some year previous to 1959, but was not irrigated in 1959, was to be included.

Area reported irrigated by organizations.—Each irrigation organization was asked to report the number of acres actually irrigated in 1959 with water from the organization. Acres irrigated were counted only for the organizations delivering water directly to farm distribution systems. Land eligible to receive water directly (i.e., delivered to farm distribution systems from two organizations) was reported by each, however, and hence is counted twice. The total acres irrigated, as reported by irrigation organizations, often provides an overstatement of the acres actually irrigated. Although defined the same as acres irrigated by multiple-farm enterprises in 1950, the figures reported in the 1959 Census of Irrigation are not strictly comparable with

those shown for the 1950 Census of Irrigation because the checking of reports for the 1950 Censuses of Irrigation and Agriculture resulted in the elimination of most of the overstatement of the acres irrigated by irrigation organizations for 1950.

Water users served, total.—A water user is defined as any person or organization, which received water for use on a farm, in a business, or in or around a home. Organizations reporting by mail were not provided with a definition; therefore, the number of water users reported depends on the interpretation of "water user" by the organization.

Farm irrigation water users.—A farm irrigation water user is one who received water for irrigation and who had ten or more acres of land from which in 1959 at least \$50 worth of agricultural products were sold, or if he had less than 10 acres at least \$250 worth of agricultural products were sold in that year. Users having smaller acreages of land or smaller sales were counted as residential or other water users. This definition was provided only to irrigation enumerators, and was not given to irrigation organizations submitting reports by mail. Although the definition corresponds to that of a census farm, it was recognized that irrigation organizations would be unable to determine which of the water users met the criteria, especially if the service area included many small tracts. Moreover, in some cases, a water user as shown by the records of the irrigation organization, may rent or lease all the acreage he controls to another person and hence not qualify as a census farm for the census of agriculture. The number of farm water users, as obtained in the census of irrigation, often exceeds the number of farms receiving water from irrigation organizations, as reported in the 1959 Census of Agriculture.

Residential water users.—A residential or domestic water user is one who received water for household use and/or to water lawns, flowers, shrubs, and vegetable gardens, but who did not sell enough products to qualify as a farm.

Other water users.—Other water users include industrial plants; recreational activities, such as golf courses; public institutions; etc.

Source of water.—The basic data in regard to irrigation water supplies—from either ground or surface sources—was obtained in the 1959 Census of Agriculture. The agriculture questionnaire contained an inquiry regarding the proportion of the irrigation water used on each farm from ground-water, surface-water, and irrigation-organization sources. Ground-water sources include wells (pumped or flowing) and springs; surface-water sources include streams, lakes, reservoirs, and sewage and drainage ditches. The percentages reported for each source were multiplied by the total area irrigated on each farm, during the office processing of the agricultural questionnaires. An allocation, between ground- and surface-water sources, was made of the water received by farms directly from irrigation organizations. This was accomplished as follows:

1. The irrigated acreage computed for ground, surface, and irrigation-organization sources as shown by the census of agriculture was totaled for each county.

2. The quantity of water received from ground and surface sources as reported by irrigation organizations was tabulated for each drainage basin.

3. The calculated acres of land irrigated by irrigation organizations as shown by data from the census of agriculture was placed on a map with county and drainage basin boundaries. If the county were entirely within a drainage basin, then the acres irrigated from ground and surface sources by irrigation organizations were allocated by multiplying the acres irrigated by the percentage of water irrigation organizations obtained from ground and surface sources in the drainage basin. If only a part of a county were in a drainage basin, then the acres irrigated by water from irrigation organizations as shown for the census of agriculture were allocated to each drainage basin on the basis of total acres irrigated by water from irrigation organizations for the minor civil divisions or other county subdivisions comprising the part of

the county within the drainage basin to the acres irrigated by water from irrigation organizations. The acreage irrigated by water from ground and surface sources was calculated for each drainage basin part of the county in the same way as for counties entirely within a drainage basin.

4. The total acreage irrigated by water from ground and surface sources was obtained by adding the calculated acreage for the counties and parts of counties comprising the drainage basin.

5. Totals for the acres irrigated by water from farm sources, by ground and surface sources were also obtained for each drainage basin by adding the data for the census of agriculture for the counties and parts of counties comprising the drainage basin. When only part of a county was within a drainage basin, the acres irrigated by water from farm sources, was obtained by totaling the acres irrigated for the minor civil division or other county subdivisions in the drainage basin.

6. To obtain totals for acres irrigated by water from ground and from surface sources, totals for water obtained from farm sources were added to the corresponding totals for water obtained from irrigation organization sources.

A conveyance system comprises the canals, pipes, and tunnels of an organization constructed to carry water from one place to another. It does not include drainage ditches not operated as water supply canals, nor reservoirs, nor stream channels.

Water delivered by an irrigation organization, to a water user or to another irrigation organization, means water which flowed from a canal, pipe, or reservoir operated by one organization directly into a canal, pipe, or reservoir operated by a water user or another organization. Water released to a natural stream channel for diversion by a water user or another organization downstream was not considered a delivery by the organization releasing the water; it was considered as spillback.

Quantity of water is given in the tables in acre-feet. An acre-foot of water is the quantity sufficient to cover 1 acre to a depth of 1 foot, or a total of 43,560 cubic feet. Quantities of water reported on the questionnaires in units other than acre-feet were converted to acre-feet.

Drainage basin is the area of land from which water flows into a given stream, lake, or other body of water or into a natural depression. Drainage basins from which water does not flow into streams that lead to the ocean are termed "independent basins."

The drainage basins for which data from the 1959 census have been tabulated are essentially the same as those used in 1950. Before enumeration, these maps were reviewed by field offices of the United States Geological Survey or United States Army Corps of Engineers. Some changes were made for 1959 in the drainage basin boundaries used in 1950 in order to conform more closely with the drainage basin boundaries used by other government agencies and with stream-gaging stations.

Water conveyed represents the net quantity of water entering the conveyance systems operated by irrigation organizations in each of the designated drainage basins. The quantities reported are "net" in that (1) water transferred from one irrigation organization to another is counted only once; and (2) water released from conveyance systems of irrigation organizations to reservoirs, streams, or drainage ditches or for ground-water recharge is not included. The figures include water conveyed only for withdrawal uses. They, therefore, do not include water used or released for navigation, fish and wildlife, pollution control, or hydroelectric power generation in the same drainage basin. (These uses were included in the 1950 Census of Irrigation and account for most of the water then reported for uses other than irrigation in 1950.)

Conveyed water from surface sources within basin.—Surface sources of water include streams, lakes, reservoirs, and sewage and drainage ditches. Surface water, obtained from natural sources by organizations, represents the amount by which irrigation organizations reduced the supplies of surface water in a particular drainage basin. Water obtained from another basin

released for any reason to surface sources from the conveyance system of an irrigation organization (considered to be a negative withdrawal) was subtracted from the amount withdrawn from surface sources in the drainage basin where the water is released. When the figures for all organizations in a basin were combined, the amount of such surface water diversions usually exceeded the amount of interbasin water transfers released to streams. However, in some basins the quantity of water transferred from other basins and released to streams was greater than the total surface diversions in the basin by the irrigation organizations in the basin, and in such cases, the quantity of water appears in the table as a negative number.

Water entering conveyance systems.—The total water entering conveyance systems in a drainage basin includes the quantity obtained from natural sources in the basin plus water received from other basins. The total water conveyed is shown in acre-feet.

Conveyed water from ground sources within basin.—Ground-water sources relate to wells (pumped or flowing) and water taken directly from springs. The amount of ground water represents the quantity taken from ground-water sources in each basin by irrigation organizations. In 1950, ground-water sources were defined to include only pumped wells.

Release of water from reservoirs.—Releases of water from reservoirs were reported as surface water only if water were diverted into a canal or piped directly from the reservoir itself. Releases from a reservoir to a stream channel for any purpose were not included. If water released by a reservoir were diverted from the stream below the reservoir the quantity reported as received was the amount diverted from the stream, not the amount released from the reservoir. The point of diversion was taken as the location at which the water entered the conveyance system and this could have been in a drainage basin other than the drainage basin in which the reservoir was located. The quantities of water delivered, conveyance loss, etc., in the tables, therefore, do not include reservoir inflows, releases, evaporation from reservoirs, nor changes during the year in the amount of water held in storage.

The quantity of water received for an organization operating a reservoir for storage purposes represented the amount of water entering the conveyance system plus the conveyance losses from the canal or conveyance system that conveyed the water into the reservoir. Thus water received does not include any allowance for changes in the amount of water in the reservoir nor for losses in the reservoir.

Water from other organizations in the basin.—The amount of water received from other irrigation organizations in the basin represents the quantity of water received into the conveyance systems of irrigation organizations from the conveyance system of other irrigation organizations in the same drainage basin.

Water from natural sources within basin.—This is the sum of the water withdrawn within the basin from surface- and ground-water sources.

Water from another drainage basin.—This represents the quantity of water conveyed into the drainage basin from an adjoining basin in a canal, pipeline, or tunnel operated by an irrigation organization. It includes the quantity of water which flowed across the basin boundary in irrigation conveyance systems, regardless of the use of that water. It does not include water flowing from one drainage basin to another in streams or drainage ditches.

Total water leaving conveyance systems.—The total water leaving conveyance systems of organizations is equal to the total water entering the conveyance systems of the organizations in a drainage basin.

Water delivered to farm irrigation water users represents the quantity of water which was delivered at the turnouts to individual irrigated farms. Any water delivered to farm irrigators and used for livestock or other nonirrigation purposes is also included, but the quantity of water used for these purposes represents a very small part of the total water delivered.

Water delivered to residential water users is the amount of water delivered by irrigation organizations to individual water users for household use and for watering lawns, flower gardens, vegetable gardens, etc. It does not include water delivered to urban water-supply systems.

Water delivered for other uses includes any water delivered by an irrigation organization other than water delivered (a) to farm irrigation water users, (b) to individual residential water users, and (c) to other irrigation organizations. It includes water delivered to municipal and suburban water systems not delivering any water for farm irrigation; water delivered for industrial uses; water delivered to farms which used water for livestock or other nonirrigation uses only; and water conveyed for ground-water recharge. Water for other uses does not include water used for hydroelectric power generation only, or to maintain stream flow, for navigation, fish and wildlife protection, or for pollution control.

Water delivered to other irrigation organizations represents the amount of water conveyed from a pipe, canal, or reservoir operated by one irrigation organization into a pipe, canal, or reservoir operated by another irrigation organization, at points within the drainage basin. The amounts are the same as the quantities reported as received from other irrigation organizations in the same basin.

Water delivered for use in the basin is the sum of deliveries at points within the basin to farm irrigation water users, residential water users, and for other uses.

Water conveyed to another drainage basin is the amount of water conveyed from the drainage basin into an adjoining basin or basins, in the conveyance systems of irrigation organizations. The amount flowing across a drainage basin boundary in the conveyance system of irrigation organizations is counted regardless of its use. The disposition of such water is accounted for in the basin to which it was conveyed.

The figures are identical to those given under "Water conveyed from another drainage basin" but tabulated under the basin from which the water was conveyed. The lines in State table 1, entitled "From drainage basin number" and "To drainage basin number," together with the footnotes referring to those lines show the drainage basins involved in the interbasin transfers.

Conveyance loss in basin.—Conveyance loss is the amount of water lost from evaporation, seepage, and wastage not returned in canals or pipes to streams associated with the conveyance of water during the year in the canals and conveyance systems operated by irrigation organizations between natural sources and points of delivery to water users. Conveyance loss does not include losses from reservoirs, or in natural stream channels, or water released for any reason to streams or reservoirs. Losses in the distribution systems of the water users are not included.

The average delivery per acre is given separately for organizations, which did not report water from other sources used on the same land, and for those which did report water from other sources used on the same land. The organizations which did not report water from other sources used on the same land were classified according to the acre-feet of water delivered per acre irrigated, in order to provide more accurate data on the quantity of water used per acre. The classification of organizations operating in more than one basin was made on the basis of acre-feet of water delivered per acre irrigated for the entire organization rather than just the part within the drainage basin.

New capital investment, 1950-1959.—New capital investment represents the amount spent by irrigation organizations for additional new works and equipment for irrigation and drainage from January 1, 1950, to December 31, 1959. It includes expenditures for new construction, enlargement or improvement of works, or for purchase of additional new equipment. It includes only that portion of the cost of multiple-purpose works chargeable to the irrigation and drainage of farm and ranch lands, and the portion financed by the irrigation organization of the cost of works built jointly with another organization. It does not include expenditures for repairs and replacements, operation and maintenance, payment for works constructed before 1950, purchase of water rights, land, or stock or shares in another organization, or contracts or repayment for the purchase of works constructed by the U.S. Bureau of Reclamation or by any other irrigation organization. For new irrigation organizations with irrigation works under construction, the amount spent on both the completed and uncompleted parts of the works from January 1, 1950, to December 31, 1959, were included. However, new capital investments for any organizations that did not deliver water in 1959 were not included.

Each organization was asked to report only its expenditures for works and equipment by itself and not to include expenditures made by any other organization on works which the organization operated in 1959. In the case of works built by the Bureau of Reclamation but now operated by water users organizations, the amount of the expenditures made by the Bureau of Reclamation on the project from January 1, 1950, to December 31, 1959, was obtained from the bureau and included with the expenditures of the water users organizations. In summary table 18, expenditures made by the Bureau of Reclamation are shown separately from those made by other organizations.

For interbasin organizations the new capital investment was tabulated for the drainage basin in which the investment was made.

Type of organization.—The types of organization under which the data are classified are as follows:

Mutual or cooperative organizations.—Mutual or cooperative organizations are private (nongovernmental) organizations controlled or operated by two or more water users primarily to supply water to their own farms. They do not include district enterprises organized under special State laws. They do not have the power to levy taxes and they are operated for the benefit of water users rather than for the profit of owners. If 50 percent or more of the acreage irrigated was not in the farms of the water users who controlled and operated the enterprise, the organization was classified as "commercial." Mutual or cooperative organizations include partnerships of two or more farms which operate irrigation supply works or equipment; groups of water users informally associated under verbal or written agreements; mutual irrigation or water companies; water users associations; "lateral" companies; community ditches or "acequias" organized originally in accordance with old Spanish, Mexican, or Indian customs. Mutual or cooperative organizations may be either unincorporated or incorporated.

District organizations.—District organizations are public corporations established under special State laws to serve particular purposes. A district organization may serve purposes other than irrigation of farm lands and may be known under a variety of names other than "irrigation district," such as conservancy district, water improvement district, water storage district, and State reclamation district. Reclamation districts organized under State laws should not be confused with the United States Bureau of Reclamation projects.

United States Bureau of Reclamation organizations.—As the name implies, United States Bureau of Reclamation organizations include the projects operated by the United States Bureau of Reclamation. If the operation of works constructed by the Bureau of Reclamation had been transferred entirely to a water-users organization, the organization was classified according to the successor type of water-users organization such as district or mutual. If part of the works of the irrigation project were operated by the Bureau of Reclamation and part by a water-users organization, the parts operated by each were reported as separate organizations. In summary tables 10 and 17, data for United States Bureau of Reclamation constructed projects transferred to water users for operation are shown separately. The data for these projects are also included with the type of organization in which the water-user organization was classified in 1959. The purpose for presenting these data separately is to give, as nearly as possible, complete information for all irrigation organizations built by the Bureau of Reclamation.

United States Bureau of Indian Affairs organizations.—These are organizations which were operated by the United States Bureau of Indian Affairs of the United States Department of the Interior.

Commercial organizations are privately operated organizations (by individuals, partnerships, or corporations) with 50 percent or more of the acreage irrigated in farms of water users who do not share in the control and operation of the organization. In some cases, commercial organizations are public utilities regulated by a State commission or by the governing board of a county.

State organizations are those operated by a State agency of any kind.

City or town organizations are those operated by municipalities usually in combination with a domestic water-supply system. If a city or town water-supply organization supplied water for the irrigation of 100 or more acres of agricultural land, it was enumerated as an irrigation organization.

Irrigation organizations by type of service provides a classification of organization by the extent to which water was conveyed by more than one organization between its diversion from a natural source and its delivery to individual water users. The irrigation organizations are classified according to the origin of water conveyed by the organization—that is, (1) all water from ground and surface sources only, (2) all water from irrigation organizations, (3) all water from ground and surface sources, and (4) organizations which conveyed no water in 1959. Organizations which conveyed no water in 1959 are those which operated reservoirs but not conveyance facilities.

Total water conveyed was obtained by adding together the amount of water obtained from surface- and ground-water sources and the amount received from other organizations. This procedure, therefore, caused a double counting of the water obtained from the other organizations if the water were included in the total conveyed by the receiving organization.

Because of the method of handling interorganization transfers released to streams, and organizations receiving water from other organizations and releasing part or all of the water to natural stream channels, negative quantities appear for the quantity of water "From surface and ground water sources," when the amount of water released to streams exceeds the quantity of water taken from sources within the basin or State.

Water from other sources.—The purpose of the question "Was any water from other sources or other organizations also used in 1959 to irrigate the same farm and ranch lands to which water was delivered by this organization?" was to provide a basis for selecting organizations which furnished all the water for irrigating farm and ranch lands in order to make tabulations of acres irrigated and water use for such organizations. The

classification of organizations by acre-feet of water used per acre was made only for those organizations reporting that they provided all the water used by the farms they served.

Size or organization.—Data are presented for three measures of the size of irrigation organizations. These measures are number of farm irrigation water users served directly, number of acre-feet of water delivered directly to farms, and number of acre-feet of water conveyed.

In the case of organizations operating in more than one drainage basin, all measures of size relate to operations of the irrigation organization in all basins rather than to the operations within one drainage basin.

Comparability of data for prior censuses and for the census of agriculture.—The comparability of data for the various censuses of irrigation have been affected by changes in definitions and procedures. The data for the census of irrigation and the census of agriculture are not fully comparable, because of differences in definition and the extent of reconciliation made in reports for the two censuses. The following discussion relates to most of the important differences in comparability.

Quantity of water by drainage basins, 1959 and 1950.—In 1959, a report was obtained for each irrigation organization for the quantity of water delivered to farm water users for each drainage basin. For 1950, data were not obtained from each irrigation organization for each drainage basin for the quantity of water delivered to farms. In 1950, irrigation organizations operating in more than one county or drainage basin reported 47 percent of all water delivered to farms and other irrigation organizations. For these organizations the quantity of water delivered to farms was allocated to drainage basins in proportion to the acreage irrigated by such organizations in each drainage basin. In 1950, no allocation was made by drainage basins of the quantity of water obtained from ground and surface sources, the quantity of water lost in conveyance, and the quantity delivered to other irrigation organizations. In the drainage basins, where a substantial part of the water is obtained from sources outside the drainage basin, the data for 1959 and 1950 are not fully comparable.

Farms or farm water users supplied by irrigation organizations and the number of farms reporting water received from irrigation organizations.—An examination of data for the number of water users or farms provided with irrigation water as reported by irrigation organizations and the number of farms receiving water from irrigation organizations for the census of agriculture indicates that the data from the two sources are not comparable. For example, for 1959, the number of farm water users as reported by irrigation organizations for the 18 States was 333,654. The number of farms reporting water received from irrigation organizations as shown by the census of agriculture for the 18 States was 153,704. In many cases, irrigation organizations count as the number of farm users, the number of stockholders, the number of ownership units, the number of persons paying bills, or the number of tracts eligible to receive water as the number of farm water users. When two or more irrigation organizations furnish water to the same water user, the water user is counted by each organization supplying the water. Undoubtedly some of the farm water users reported by irrigation organizations were landlords not operating a farm. In the census of agriculture, one farm operator often operates several tracts and rents land from several owners, or obtains water from more than one irrigation organization. In the census of agriculture, such a farm operation is counted as one farm. On the other hand in the census of irrigation, each owner of land or tract may be counted as a separate farm water user.

For the 1950 census, the number of farms receiving water as reported by each irrigation organization was checked against the records for the farm operators reporting water received from the irrigation organization as shown by the census of agriculture.

The checking resulted in the number of farms reported as receiving water from irrigation organizations being reduced from approximately 400,000 to 246,000. Because of the correction in the number of farms furnished irrigation water as shown by reports of the census of irrigation as the result of the matching of reports for the census of irrigation with the reports of the 1950 Census of Agriculture, the number of irrigated farms shown for the 1950 Census of Irrigation is not comparable with number of farm irrigation water users reported for irrigation organizations in 1959 nor with the number of farm water users or irrigated farms reported for irrigation organizations for other censuses.

Acres irrigated as shown by census of irrigation and census of agriculture.—For every census, the area irrigated as reported by irrigation organizations has exceeded the acres irrigated as reported by the census of agriculture. The area irrigated as reported by irrigation organizations has been overstated for every census. The overstatement arises from two sources:

1. Some irrigation organizations report the area assessed for water, the area eligible to receive water, or the total area in farms receiving water. Usually these areas are considerably greater than the area irrigated during a year.

2. In some cases, two or more irrigation organizations provide water used to irrigate the same area. In such cases, the same area is counted by each of the organizations supplying the water.

ACREAGE OF IRRIGATED LAND FOR THE 17 WESTERN STATES AND LOUISIANA

¹Total irrigated land, all States.

²In 1889, 1899 and 1944 through 1959, all irrigated land in farms; 1929 and 1934, acreage of irrigated crops only; 1939, acreage of irrigated crops plus irrigated pasture. Data for 1909 and 1919 not available.

A comparison of the area reported as irrigated by each irrigation organization and the area reported as irrigated by the farm operators receiving water from the organization was made for the 1950 census. This comparison resulted in the reduction of approximately 7 percent in the acreage irrigated as reported by irrigation organizations. In 1959, approximately one-seventh of all the irrigation organizations provided water to farms that also received irrigation water from other irrigation organizations. These irrigation organizations provided water for one-fifth of the area irrigated by irrigation organizations in 1959. However, the area receiving irrigation with water from two or more irrigation organizations represented about one-fifth of the area irrigated by all irrigation organizations.

For 1950, the overstatement of the area irrigated plus the duplication in the counting of the area irrigated by water from two or more irrigation organizations was equal to 12 to 15 percent of the area irrigated as originally reported by irrigation organizations for 1949.

For 1959, irrigation organizations reported 17.7 million acres irrigated. The calculations of area irrigated by water furnished by irrigation organizations for farms included in the census of agriculture was 12.9 million acres. Part of the 4.8 million acre

difference is the result of the counting by each irrigation organization of areas to which two or more irrigation organizations provided water, and part of the difference is the result of the overstatement of areas irrigated by irrigation organizations. Also, it is very likely that the method used in the 1959 Census of Agriculture for calculating acres irrigated by water furnished farms by irrigation organizations may have resulted in an understatement of the area actually irrigated. There were 27,102 farms, representing 10.1 percent of all the farms with irrigation in the 18 States that obtained water from on-the-farm sources and also from irrigation organizations. The total acres irrigated on these farms was 5.3 million, of which 2.6 million acres were allocated as irrigated by water from irrigation organizations. On many farms, where irrigation water is obtained from irrigation organizations, the cost of water from irrigation organizations is likely to be less than the cost of water obtained from wells, etc. Because of the differences in cost and in the availability of water during the irrigating season, it is very likely that the proportion of the area irrigated with water from irrigation organizations may be considerably greater than the proportion of water obtained from such source.

Because of the correction of the area irrigated by irrigation organizations on the basis of detailed comparisons of the reports for each irrigation organization with the records for the 1950 Census of Agriculture, the figures for the area irrigated by water from irrigation organizations for 1950 are not comparable with those for 1959 nor with those for 1940 and prior censuses. The difference between the area irrigated as shown by the 1959 census and the 1950 census for irrigation organizations overstates significantly the increase in the acreage irrigated by water furnished by irrigation organizations.

Irrigation in Hawaii.—The first census of irrigation organizations was taken for 1959. The figures for Hawaii have not been included with those of the 18 States in continuous United States because comparative data are not available for prior censuses. There were 16 organizations qualifying for the census of irrigation in Hawaii in 1959; these 16 organizations provided water for 86,949 out of the 141,179 acres irrigated in 1959 in Hawaii. The following table presents a summary of the more significant data for Hawaii. Of the 16 irrigation organizations in Hawaii, 10 were operated by commercial organizations and 6 by the State, cities, and other agencies.

No data are available by drainage basins for Hawaii. Some irrigation works of considerable size are operated by sugarcane plantations to provide water for a single farm. Data for those irrigation operations for a single farm are not included in the data for irrigation organizations for Hawaii.

Irrigated land in sugarcane, vegetables, and pineapples accounts for more than four-fifths of the total acres irrigated in Hawaii. Detailed data regarding irrigated farms and the acreage and production of crops on irrigated land may be found in county tables 1a and 11a of part 50 of volume 1 of the reports for the 1959 Census of Agriculture.

SUMMARY

This summary presents both current and historical data pertaining to irrigated farms and irrigated land in farms obtained in the 1959 and earlier censuses of agriculture; and data pertaining to irrigation organizations from the 1959 and earlier censuses of irrigation; and data pertaining to irrigation water obtained in the 1959 and earlier censuses, both agriculture and irrigation.

Irrigated land in farms.—The acreage irrigated in 1959 for the 48 conterminous (Alaska and Hawaii are excluded) States was 33,021,799 acres according to the 1959 Census of Agriculture. This was 11.7 percent greater than the 29,552,155 acres reported in 1954 and 28 percent greater than the 25,787,455 acres reported in 1950 for the calendar year 1949. For the 17 conterminous Western States and Louisiana, the 1959 irrigated area amounted to 31,222,967 acres, or 94.6 percent of the irrigated acreage for the 48 conterminous States. The increase in irrigated acreage for the 18 States was 12.8 percent from 1954 to 1959 and 25.7 percent from 1949 to 1959.

The change in irrigated acreage in the 18 States varied considerably by geographic areas. Of the 6.4 million acres net increase from 1949 to 1959, 42.2 percent occurred in the Plains States of Texas and Oklahoma; 29.4 percent in the Northern Plains States of Nebraska, Kansas, North and South Dakota; and 22.8 percent in three Pacific States of California, Washington, and Oregon. In the eight Mountain States, the net increase was only 452,228 acres or 7.1 percent of the total increase in the 18 States. Decreases were reported for Colorado, Nevada, and Utah, and also for Louisiana.

The largest acreage expansion in the 10-year period in any individual State was recorded in Texas with an increase of 2,524,104 acres, or 80.6 percent increase in the irrigated acreage from 1949 to 1959. Nebraska had an increase of 1,201,667 acres, or 137.1 percent, and California an increase of 957,246 acres, or 14.9 percent from 1949 to 1959.

IRRIGATED LAND IN FARMS: 1959, 1954, AND 1949

Area or State	1959 (acres)	1954 (acres)	1949 (acres)
48 conterminous States, total.....	33,021,799	29,552,155	25,787,455

Utah.....	1,354,284	1,480,366	1,306,510
California.....	7,395,570	7,048,049	6,438,324

For the major drainage basins, the Mississippi River Basin, which includes all the Plains States except for the southern part of Texas, with 8.97 million acres, had the largest irrigated acreage, and its increase of 3.16 million acres over 1950 was the largest in any of the basins. The Great Basin had a small decrease in irrigated acreage from 1949 to 1959.

The different regional trends in the number of acres irrigated have been affected by a number of factors. The increase in

ACREAGE OF IRRIGATED LAND BY MAJOR DRAINAGE BASINS IN THE 17 CONTERMINOUS WESTERN STATES AND LOUISIANA: 1959 AND 1954

Nebraska, Kansas, Oklahoma, and Texas has been largely due to the development of ground-water supplies. In the Northern Plains States, irrigation expansion was in part the result of the development of large-scale public projects. In the Mountain States, ground-water supplies are not as plentiful as in the Plains States and surface-water supplies were more fully developed before 1950. Irrigation growth in the Pacific States has resulted from the availability of both ground- and surface-water supplies and the development of large-scale public irrigation projects. The decrease of irrigated acreage in Louisiana is largely the result of lower rice acreage, while the decrease in irrigated acreage in the Great Basin was largely the result of a water shortage in 1959.

Sources of irrigation water.—According to the 1959 Census of Agriculture, of the total of 31,222,967 acres irrigated in the 18 States, 13,243,912 acres, or 42.4 percent, were irrigated from ground-water sources on the farm; 5,081,250 acres, or 16.3 percent, were irrigated from surface-water sources on the farm; and 12,897,805 acres, or 41.3 percent, were irrigated by water received from irrigation organizations.

The irrigation organizations obtained the major portion of their water from surface-water sources. In the 18 States, the irrigation organizations reported 72,997,259 acre-feet of water were obtained from natural sources. Of this amount, 68,685,789 acre-feet, or 94 percent, was from surface sources.

PERCENTAGE DISTRIBUTION OF TOTAL ACRES IRRIGATED, BY SOURCE OF WATER, BY STATES: 1959

Arizona, Louisiana, and California are the only States in which the proportion of ground water obtained by irrigation organizations exceeded the average for the 18 States. In Arizona, irrigation organizations obtained 39 percent of the water from ground-water sources; in Louisiana, irrigation organizations obtained 16.4 percent; and in California, irrigation organizations secured 9.6 percent of the total water from ground-water sources.

To determine the total farm acreage irrigated from ground and surface sources, the acreage irrigated by organization water in each drainage basin was divided between ground and surface

sources in proportion to the amount of water obtained from each source by the irrigation organizations and these figures were added to the acreage irrigated from farm ground and surface sources. In this manner, the total farm acreage irrigated from ground-water sources was determined to be approximately 14.0 million acres or about 45 percent of the total acres irrigated. The total farm acreage irrigated from surface-water sources equaled about 17.2 million acres or about 55 percent of the total acres irrigated.

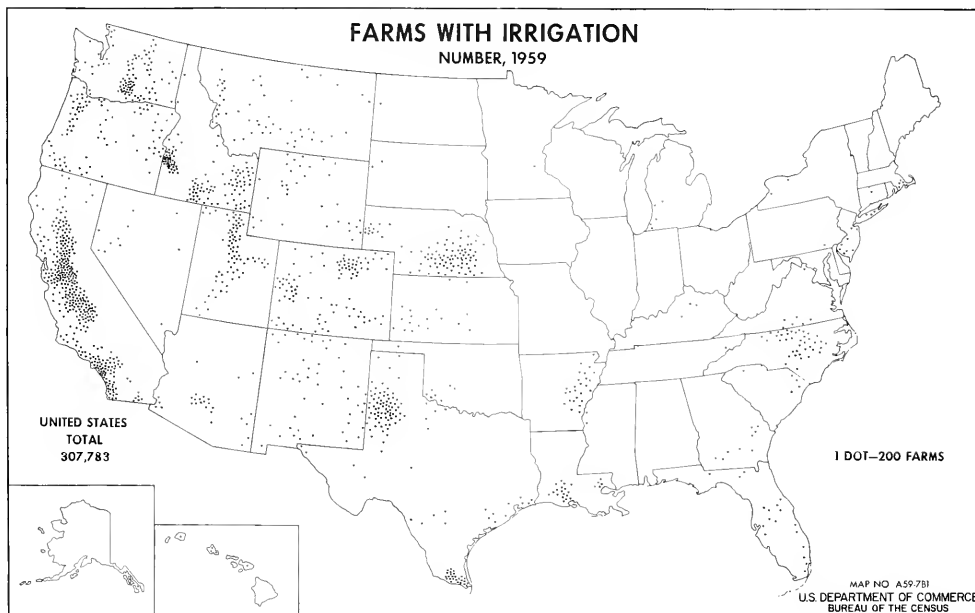

The percentage of the irrigation water which originated from ground or surface sources varied greatly among the 18 States. In Kansas 88.7 percent of the irrigation water was secured from ground sources. The corresponding percentages for North Dakota and Montana were 2 percent. The States with over 50 percent of the irrigation water received from ground sources were the Plains States of Nebraska, Kansas, Oklahoma, and Texas; and Arizona, New Mexico, and Louisiana. In each of the other 10 States, the proportion of the water from ground sources was less than 20 percent.

Irrigated farms.—There were 306,532 farms in the conterminous United States with irrigated land in 1959 according to the 1959 Census of Agriculture. In 1954, irrigated land was reported by 320,236 farms and in 1950 by 305,061 farms. The number of irrigated farms was almost the same in 1959 as in 1950 but the number decreased 4.3 percent between 1954 and 1959. In the 18 States the number of irrigated farms in 1959 was 7.4 percent smaller than in 1950 and 6.8 percent smaller than in 1954. The

number of irrigated farms decreased in all the Mountain States and in California and Louisiana. In each of the Plains States and Washington there was an increase in the number of irrigated farms from 1954 to 1959.

NUMBER OF IRRIGATED FARMS AND PERCENT OF ALL FARMS WITH IRRIGATION: 1959, 1954, AND 1950

Area or State	Number of irrigated farms			Percent of all farms reporting irrigation

Oregon.....	17,724	19,826	17,663	41.6	36.4	29.5
California.....	74,138	84,502	90,755	74.7	68.7	66.2

In the areas showing a decrease in the number of irrigated farms, the decline was largely the result of the consolidation of farms into larger operating units. The States with an increase in the number of irrigated farms also showed an increase in irrigated acreage. In the States with an increase in the number

the existing farms and in some cases the introduction of irrigation resulted in the division of existing dryland farms into a larger number of smaller irrigated farms. With the exception of Arizona and Nevada, a larger proportion of the farms in each of the 18 States had irrigation in 1959 than in 1950.

Irrigation organizations.—A total of 8,749 irrigation organizations was included in the 1959 Census of Irrigation in the 17 conterminous Western States and Louisiana. This compares with 10,491 organizations in 1950. In Kansas, North Dakota, and South Dakota there was a larger number of irrigation organizations in 1959 than in 1950.

Types of irrigation organizations.—The number of mutual organizations reported in 1959 was 7,726. Of these, 4,989 were classified as unincorporated and 2,737 as incorporated. The total number of mutual organizations had declined from 9,348 in 1950 when there were 6,464 unincorporated organizations and 2,884 incorporated organizations.

The number of mutual organizations, incorporated and unincorporated combined, decreased in 16 States. The decrease in the number of mutual organizations resulted from several factors. In California, the agricultural lands of many of the smaller organizations have been converted to urban uses. In New Mexico, many of the small organizations did not have a water supply in 1959 and, therefore, were not included in the census. In all States, some of the small mutual organizations which had served two or three farms in 1950, did not qualify for inclusion in the 1959 census because of the consolidation of the farms served by them.

The combined irrigated acreage reported by both the unincorporated and the incorporated mutuals equals 8.8 million acres. This is larger than the irrigated acreage reported by any other type of organization. However, the 6.9 million acres reported irrigated by irrigation districts is greater than the acreage reported by either type of mutual organization alone.

There were 558 irrigation districts reported in the 1959 Census of Irrigation which was an increase from 483 in 1950. The number of irrigation districts increased in 10 of the 18 States. In Nevada, the number was identical for both 1950 and 1959. There were no irrigation districts in Louisiana.

The number of projects or storage systems (see page xvi "Organizations included" for definition of project) operated by the Bureau of Reclamation increased from 37 in 1950 to 54 in 1959. The 54 projects reported 710,904 acres irrigated; however, these figures do not represent the total contribution of the Bureau of Reclamation to irrigation. Usually as the Bureau of Reclamation completes a project, the project is turned over to a water-users organization for operation. These organizations were enumerated under the type of organization they represented (in most cases, irrigation districts). In the 1959 Census of Irrigation, there were 147 organizations which had been built by the Bureau of Reclamation but were then operated by water-users organizations. These 147 organizations reported 3.3 million acres irrigated. This represents the total number of organizations for which the irrigation facilities were built by the Bureau of Reclamation and turned over to water users for operation.

The number of commercial organizations in the 18 States, dropped from 401 in 1950 to 246 in 1959. There was a decrease in the number of commercial organizations in both Louisiana and California, the only States where commercial organizations are important. The decrease in the number of organizations in California was largely the result of farm lands being taken over for urban and suburban development. In Louisiana, a number of commercial irrigation organizations did not qualify for inclusion in the census because they provided water for only one farm.

According to the 1959 Census of Irrigation, there were 123 United States Bureau of Indian Affairs irrigation projects. This was a decline from the 141 reported in 1950. The decrease resulted largely from differences in counting projects as independent irrigation organizations, when some of the projects were controlled by the same part of the Bureau of Indian Affairs.

Interrelationships between irrigation organizations.—Many irrigation organizations do not deliver all of their water for irrigation direct to farms, but rather deliver part or all to other irriga-

tion organizations which may deliver to farms or which in turn may deliver water to still other irrigation organizations.

Out of the 8,749 total irrigation organizations, reported in the 18 States, 5.2 percent received part of their water from other organizations, and 8 percent received all of their water from other organizations. In the 18 States, irrigation organizations reported 56.1 million acre-feet of water delivered to farm and residential water users. Of this amount 18.8 percent was delivered by organizations which obtained part of their water from other organizations, and 7.5 percent was delivered by organizations which received all of their water from other organizations.

The delivery of part of the water to other organizations was reported by 379 organizations or 4.3 percent of all organizations. The delivery of all water to other organizations was reported by only 67 organizations. Organizations supplying part of their water to other organizations delivered 8.7 million acre-feet of water to those other organizations or 9.5 percent of the total water conveyed, including water delivered to other organizations. Organizations, delivering all of their water to other organizations supplied 9.9 million acre-feet of water or 10.8 percent of the total water conveyed.

Size of organization.—Data are presented for the three measures of size of organizations. Acre-feet of water conveyed constitutes the most accurate measure of size. Of the 8,749 irrigation organizations in the 18 States, 8,669 conveyed water (the other 80 operated reservoir facilities and released all water to natural stream channels). The 8,669 organizations which conveyed water, reported an average of 10,571 acre-feet of water conveyed. This average includes quantities delivered to other organizations. More irrigation organizations were in the size group conveying 300 to 999 acre-feet of water than in any other size group. There were 1,707 organizations which conveyed 1 to 299 acre-feet and 2,059 organizations which conveyed between 1,000 to 2,999 acre-feet. There were 132 organizations which conveyed over 100,000 acre-feet of water.

Capital investment.—The data given for capital investment of irrigation organizations are not precise. In the 1940 Census of Irrigation the organizations were asked to report the total investment in their works and equipment as of December 31, 1939. In the censuses of 1950 and 1959 the organizations were asked to report only capital investments made during the 10-year period preceding the census. These figures which have been added together to obtain total capital investment and the total have not been adjusted to take into account changes on the price level. The amounts of investment reported by the smaller organizations are largely estimates. Many changes in ownership, organization, and method of computing the valuation have influenced the accuracy of the figures for capital investment.

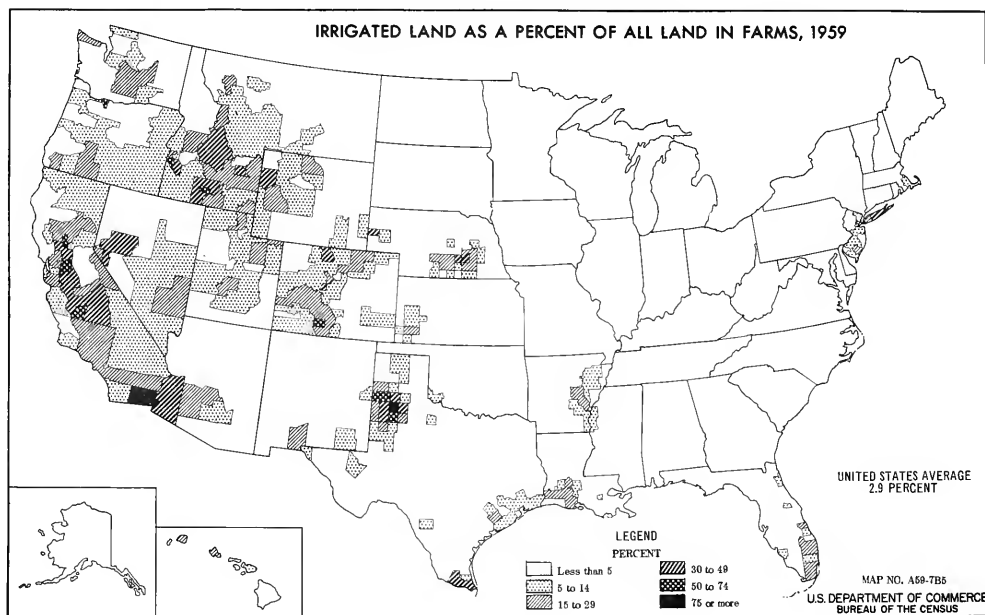

Farms by extent of irrigated crops.—For tabulation purposes, farms in the 18 States were classified into four groups: (1) Farms with all crops irrigated, (2) farms with part of the crops irrigated, (3) farms with land irrigated and no crops harvested from irrigated land, and (4) farms with no irrigated land. The summary for these four groups of farms for the 18 States for 1959 follows:

Item	All farms	Farms with all crops harvested, irrigated	Farms with part of crops harvested, irrigated	Farms with irrigated land, but no crops harvested from irrigated land	Farms with no irrigated land
Number of farms.....	1,644,166	178,029	64,404	24,998	776,735
Land in farms..... acres.	714,860,571	105,108,816	92,395,996	15,828,185	501,530,174
Land irrigated..... acres.	31,222,967	22,142,351	8,133,410	947,206
Cropland harvested, total..... acres.	144,414,833	18,747,587	19,089,304	644,946	105,932,996
Irrigated..... acres.	26,198,581	18,747,587	7,450,994	644,946
Not irrigated..... acres.	118,216,252	11,638,310	105,932,996
Land other than cropland harvested, irrigated..... acres.	5,024,386	3,394,764	682,416	947,206

Of the 1,044,166 farms in the 18 States, only 267,431 reported land irrigated in 1959 and only 31.2 million acres were irrigated of the 715 million acres of land in farms in these States. Irrigated farms in these States contained over 213 million acres of land. In 1959, crops were harvested from 26.2 million acres of the 31.2 million acres irrigated. The 5 million acres of irrigated land from which no crops were harvested were largely irrigated pastureland, although a part of the acreage was irrigated land in cultivated summer fallow.

In the 18 States there were 144.4 million acres of land from which crops were harvested but only 26.2 million acres, or 18

percent, were irrigated in 1959. Approximately 68 percent (26.2 million acres) of the 38.5 million acres of land from which crops were harvested on farms with irrigation were irrigated in 1959. There were 178,029 farms on which all crops harvested were irrigated. Those farms had 71 percent of all irrigated land and 72 percent of the irrigated land from which crops were harvested. There were 24,998 farms with no crops harvested from irrigated land in 1959. These farms had 947,206 acres of irrigated land and nearly 645,000 acres of land from which crops were harvested. A large part of the irrigated land on these 24,998 farms was used for pasture.

In order to facilitate the tabulation of census data on crops, farm operators were asked to indicate which crops on their farms were entirely irrigated in 1959 and to report the acreage irrigated for those crops which had only a part of the harvested acreage irrigated in 1959.

There were approximately 26.2 million acres of crops harvested from irrigated land in the 18 States. Only data for the acreage harvested are available for the crops for which only part of the acreage harvested was irrigated, since farm operators were not asked to report separately the quantity harvested from the irrigated land if only a part of the acreage for a crop was irrigated.

The data in summary table 4 for crops harvested on irrigated farms relate only to the crops for which the entire area harvested was irrigated. The entire acreage harvested and the production were included in the totals for nonirrigated crops when only part of the acreage of the crop on a farm was irrigated. The figures for nonirrigated crops include about 2.9 million acres of irrigated crops for 1959 and more than 2.0 million acres of irrigated crops for 1954. This procedure should be kept in mind if the figures are to be used in making comparisons of relative yields for irrigated and nonirrigated crops. Since the acreage irrigated is not available for those crops for which only a part of the acreage

harvested was irrigated in 1954, the data in summary table 4 cannot be used to measure the change from 1954 to 1959 in the irrigated acreage of each crop harvested. Summary table 3 presents the total acres irrigated for each crop in 1959 and also the acreages irrigated for those crops for which only a part of the acreage was irrigated in 1959. Six crops—sorghums (755,000 acres), corn (725,000 acres), hay (483,000 acres), wheat (432,000 acres), cotton (446,000 acres), and barley (92,000 acres)—accounted for a total of 98 percent of the 3,000,000 acres of irrigated crops harvested on farms on which only a part of the acreage of such crops was irrigated in 1959. These were the only crops for which as much as 3 percent of the total acreage of the irrigated crop was reported on farms on which only a part of the crop was irrigated.

Importance of crop production on irrigated land.—In order to indicate the importance of the production of each crop harvested on irrigated land, estimates have been made for the production on the irrigated part for each crop irrigated, when only part of the acreage of the crop was irrigated. These estimates represent approximations as the estimates have been made by assuming that the yield per acre for the acreage irrigated for crops for which only part of the acreage was irrigated was the same as for the acreage for which the entire acreage was irrigated. These estimates have been made only for the 18 States as a group.

ESTIMATED PRODUCTION OF PRINCIPAL CROPS HARVESTED FROM IRRIGATED LAND
FOR 18 SPECIFIED STATES: 1959

Crop		Estimated total production on irrigated land in 18 States			Reported production on irrigated land where all of crop was irrigated	Estimated production on irrigated land where part of crop was irrigated
		Total	Percent of total for 18 States	Percent of total for conterminous United States		
FIELD CROPS						
Corn harvested for grain	bushels	150,415,229	27.9	4.1	98,228,621	52,186,608

IRRIGATED ACREAGE OF SPECIFIED CROPS AND PASTURE IN THE
17 WESTERN STATES AND LOUISIANA: 1959

The making of estimates using the same procedure by counties or by States would provide different totals. The estimated production for the irrigated acreage where only part of the acreage was irrigated represents 6 percent or more of the total production for only seven crops, sorghums (28 percent), corn (35 percent), hay (6 percent), wheat (25 percent), cotton (13 percent), popcorn (13 percent), and cowpeas for peas (11 percent).

No data are available regarding the production of tree fruits, nuts, and grapes on irrigated land. However, the irrigated acreage of tree fruits, nuts, and grapes represents almost 80 percent of the total acreage in the 18 States and almost 40 percent of the total acreage in the 48 States. The value of the fruit, nut, and grape crops in the 18 States was \$708 million in 1959. A large part of this value was for crops harvested from irrigated land. The value of the tree fruit, nut, and grape crops in the 18 States comprised 55 percent of the value of these crops in the 48 conterminous States. Thus, at least half of the tree fruit, nut, and grape crops in the 48 conterminous States were produced in 1959 on irrigated land in the 18 States.

Data are not available for the production on irrigated land of vegetables harvested for sale. The following table summarizes the acreages of vegetables grown for sale on irrigated land in the 18 States as well as the total acreages of vegetables harvested for sale in the 18 States and in the 48 conterminous States.

Item	Total acreage 48 States	Acreage for 18 States			
		Total	Irrigated total	Irrigated acreage as a percent of total for 48 States	Irrigated acreage as a percent of total for 18 States

NA Not available.

Relation of water used for irrigation and other purposes.—Data on quantity of water used for irrigation purposes are available only for water delivered to farms by irrigation organizations. Irrigation organizations provided water for the irrigation of 12.9 out of the 31.2 million acres irrigated in 1959. Irrigation organizations delivered 54.5 million acre-feet of water to farm irrigation water users. However, 9.8 million acre-feet of water was delivered to farms where water from other sources was also used for irrigation purposes. The average amount of water delivered to farms per acre irrigated, for those irrigation organizations reporting the quantity of water delivered and the acres irrigated for farms receiving water for irrigation purposes from irrigation organizations only, was 3.2 acre-feet per acre irrigated for the 18

States. The acre-feet per acre irrigated reported for their irrigation organizations varied from 1.2 to 4.8 acre-feet per acre in the 18 States. If it is assumed that the average acre-feet used per acre irrigated reported by these irrigation organizations indicate the approximate use of water per acre irrigated for land irrigated for each of the 18 States, then the total quantity of water used for irrigation purposes in the 18 States would be approximately 92 million acre feet in 1959. The conveyance loss of water as reported by irrigation organizations totaled 15.8 million acre-feet. The conveyance loss does not include losses from evaporation and other causes in reservoirs. The area of the principal reservoirs and regulated lakes in the 17 States is 3,446,000 acres and the estimated annual evaporation from these reservoirs and lakes is 12,299,000 acre-feet (Evaporation from the 17 Western States. Geological Survey Professional Paper 272-D, Geological Survey, U.S. Department of the Interior). Thus, the total water withdrawn for irrigation uses in the 18 States was approximately 120 million acre-feet in 1959. The 1958 Census of Manufacturers reported the withdrawal of 2,978 billion gallons or 9 million acre-feet of water in 1959 in the 18 States. However, 92 percent of the water withdrawn by industry was discharged into the stream, etc., and therefore may have been available for reuse.

In the 18 irrigation States, water withdrawn for the use of livestock and poultry and for public use is a small percent of withdrawals for all purposes. A large part of the water withdrawn for industrial use is returned to streams and may be reused but the water delivered to farms for irrigation purposes is not available for reuse because of transpiration and evaporation. Water used for irrigation may have amounted to as much as nine-tenths of the total water consumed in the 18 States.

NA Not available. ¹Data for a crop which was only partly irrigated are included with the nonirrigated crops. ²For continuous Western States and Louisiana. ³Nursery and greenhouse products (horticultural specialties) are the only excluded crops. ⁴Cowpeas for fresh market, or for canning, freezing or other processing are excluded. ⁵Sorghum hay and annual legume hays (soybeans, cowpeas, and peanuts) are excluded. The acreages for soybeans, cowpeas, and peanuts include both acreage grown alone and acreage grown with other crops which were separately reported only in Louisiana. ⁶Data for honeyloc melons reported separately in Arizona, included with cantaloupes.

NA Not available. ² Reported in small fractions. ³ Data for a crop which was only partly irrigated are included with nonirrigated. ⁴ For 1959 and 1954, acres obtained by adding the individual hay crops, including grass silage. Sorghum and annual legume hay are not included. ⁵ Includes data for the farms where all vegetables were wholly irrigated. ⁶ For 1959 and 1954 does not include data for farms with less than 20 acres and grapevines; for 1949 does not include acreage for farms reporting less than 1/2 acre. ⁷ For 1959 and 1954 does not include acreage for farms with less than 20 bushels harvested; for 1949, does not include acreage for farms with less than 15 bushels harvested. See text. ⁸ Data includes honeydew for Arizona; reported separately on the questionnaire. ⁹ Sorghum for all purposes, except sirup. ¹⁰ Does not include oats cut for feeding unthreshed. ¹¹ Includes production of oats cleaned out of vetch and peas. ¹² Not included in 18 States total.

SUMMARY

27

PRODUCTION, 1959, 1954, AND 1949; AND QUANTITY SOLD, 1959; FOR 19 SPECIFIED STATES—Continued

Summary Table 6.—NUMBER OF FARMS, IRRIGATED FARMS, LAND IRRIGATED, NUMBER OF IRRIGATION ORGANIZATIONS, AND LAND IRRIGATED BY IRRIGATION ORGANIZATIONS: 1890 TO 1959

[Interstate organizations are counted once in each State, but only once in 18 States total. Acres irrigated is only part within State; acres irrigated direct by two or more organizations are counted twice. See text.]

SUMMARY

29

Summary Table 6.—NUMBER OF FARMS, IRRIGATED FARMS, LAND IRRIGATED, NUMBER OF IRRIGATION ORGANIZATIONS, AND LAND IRRIGATED BY IRRIGATION ORGANIZATIONS: 1890 TO 1959—Continued

[Interstate organizations are counted once in each State, but only once in 18 States total. Acres irrigated is only part within State; acres irrigated direct by two or more organizations are counted twice. See text.]

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply to the basin or State.

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply to the basin or State.

IRRIGATION OF AGRICULTURAL LANDS

Summary Table 10 (Part 2 of 3).—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply to the basin or State.

IRRIGATION OF AGRICULTURAL LANDS

Summary Table 10 (Part 3 of 3).—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950

Item (For definitions and explanations, see text)		18 States, total	North Pacific Coast (I)					
			Total	Excluding Columbia River	Columbia River			
					Total	Below Snake River	Above Snake River excluding Yakima River	Yakima River
				(I-A)	(I-B)	(I-C)	(I-D)	
WATER DELIVERED PER ACRE								
Organizations reporting 50 water from other sources used on same land:								
1	0.1 to 0.9 acre-feet per acre.....organizations...	468	59	8	51	2	11	4
2	acres irrigated.....	1,262,270	33,295	780	32,515	460	3,530	1,500

IRRIGATION OF AGRICULTURAL LANDS

Summary Table 17 (Part 3 of 3).—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION BY STATES: CENSUSES OF 1959 AND 1950—Continued

Item (For definitions and explanations, see text)	Nevada	New Mexico	North Dakota	Oregon	South Dakota	Texas	Utah	Washington	Wyoming
WATER DELIVERED PER ACRE									
Organizations reporting no water from other sources used on same land:									
0.1 to 0.9 acre-feet per acre.....	3	45	2	28	6	12	53	4	44
acres irrigated.....	2,172	23,988	7,375	20,602	58,640	122,405	68,354	1,500	42,884
1.0 to 1.9 acre-feet per acre.....	3	158	4	9	12	26	162	16	176
acres irrigated.....	43,492	105,215	15,001	80,036	10,345	397,651	242,583	12,689	479,080
2.0 to 2.9 acre-feet per acre.....	33	119	2	127	1	20	219	39	154
acres irrigated.....	80,069	132,612	48,465	221,968	800	84,054	252,966	19,052	253,650
3.0 to 3.9 acre-feet per acre.....	31	72	...	132	5	16	188	62	105
acres irrigated.....	120,564	22,802	...	162,184	14,359	208,095	130,228	142,687	164,524
4.0 to 4.9 acre-feet per acre.....	15	24	...	84	...	5	101	71	68
acres irrigated.....	12,491	56,189	1,171	167,226	...	13,651	103,395	397,735	95,038
5.0 to 5.9 acre-feet per acre.....	3	5	...	37	...	14	42	24	32
acres irrigated.....	7,004	469	...	63,509	...	28,628	22,837	13,426	79,363
6.0 to 6.9 acre-feet per acre.....	3	3	...	25	...	3	42	17	18
acres irrigated.....	1,375	240	...	24,932	...	6,468	42,565	137,740	25,424
7.0 to 7.9 acre-feet per acre.....	2	3	...	16	...	2	16	26	17
acres irrigated.....	5,390	490	...	5,774	...	170	4,495	6,874	34,461
8.0 to 9.9 acre-feet per acre.....	...	3	...	28	...	1	13	31	15
acres irrigated.....	...	2,530	...	11,972	...	300	14,947	13,999	15,615
10.0 or more acre-feet per acre.....	1	8	...	10	...	1	5	1	14
acres irrigated.....	1,332	6,117	...	1,811	...	230	1,294	300	8,714
SIZE OF ORGANIZATION									
Size of organization (number of farm irrigation water users served directly):									
None.....	2	2	3	5	1	1	17	5	20
1 to 3.....	61	61	1	220	5	15	134	105	307
water users.....	71	148	3	541	11	36	330	250	736
4 to 9.....	42	88	2	250	9	21	264	84	202
water users.....	50	100	1	1,368	120	193	1,993	478	1,106
10 to 29.....	25	162	4	104	6	23	286	70	104
water users.....	440	2,607	71	1,741	106	403	4,804	1,077	1,639
30 to 99.....	12	107	1	44	2	17	178	27	34
water users.....	645	4,979	51	2,411	64	1,037	9,373	2,452	1,977

For other use.....organizations..... acre-feet.....	296 1,070,993	50 32,268	139 276,168	64 366,823	7 98,105	24 189,455	36 297,629
Delivered to other irrigation organizations..... organizations delivering..... acre-feet.....	444 18,644,449	45 146,523	289 4,076,342	72 4,689,112	12 9,233,223	31 3,284,876	26 499,249
SIZE OF ORGANIZATION, 1959							
Size of organization (number of farm irrigation water users):							
None.....organizations.....	164	22	76	23	34	14	9
1 to 3 water users.....organizations.....	2,811	2,232	160	18	...	1	102
4 to 9 water users.....organizations.....	2,459	1,715	593	44	...	3	78
10 to 29 water users.....organizations.....	1,752	571	1,005	105	2	8	67
30 to 99 water users.....organizations.....	1,300	130	625	143	6	20	29
100 to 299 water users.....organizations.....	369	18	213	104	5	43	17
300 to 999 water users.....organizations.....	168	1	97	38	1	4	6
1,000 or more water users.....organizations.....	52	...	33	8	5	10	...
Size of organization (acre-feet of water delivered directly to farms):							
None.....organizations.....	164	22	76	23	34	14	9
1 to 299 acre-feet.....organizations.....	1,982	1,542	323	25	...	3	116
300 to 999 acre-feet.....organizations.....	2,310	1,638	524	32	...	6	92
1,000 to 2,999 acre-feet.....organizations.....	2,046	1,210	683	72	...	8	81
3,000 to 9,999 acre-feet.....organizations.....	1,406	510	707	132	...	21	26
10,000 to 29,999 acre-feet.....organizations.....	546	63	325	130	3	28	20
30,000 to 99,999 acre-feet.....organizations.....	216	4	83	97	6	39	26
100,000 or more acre-feet.....organizations.....	79	...	16	47	6	28	10
Size of organization (acre-feet of water conveyed):							
None.....organizations.....	80	6	35	10	27	7	2
1 to 299 acre-feet.....organizations.....	1,707	1,362	256	13	...	1	76
300 to 999 acre-feet.....organizations.....	2,197	1,599	458	28	...	4	112
1,000 to 2,999 acre-feet.....organizations.....	2,059	1,273	662	52	...	9	64
3,000 to 9,999 acre-feet.....organizations.....	1,597	541	754	133	3	32	20
10,000 to 29,999 acre-feet.....organizations.....	681	101	395	140	4	32	41
30,000 to 99,999 acre-feet.....organizations.....	296	7	142	112	9	23	16
100,000 or more acre-feet.....organizations.....	132	...	33	70	11	43	10

NA Not available. ¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply to the basin or State.

Summary Table 19.-NUMBER OF IRRIGATION ORGANIZATIONS, TYPE OF SERVICE, NEW CAPITAL INVESTMENT, AND WATER CONVEYED, BY SIZE OF ORGANIZATION: CENSUS OF 1959

Item (For definitions and explanations, see text)	18 States, total			
	Size of organization (by total water conveyed)			
	0-999 acre-feet	1,000-9,999 acre-feet	10,000-99,999 acre-feet	100,000 or more acre-feet
1 Number of organizations.....organizations...	3,984	3,656	977	132
TYPE OF SERVICE				
2 All water directly from surface and ground sources.....organizations...	3,629	3,060	758	96

¹Water delivered by interstate organizations is the amount delivered within the State only for 1959, but is for the entire organization in 1949. See text.

²For 1959, 1949, and 1939 calculated average quantity of water per acre for total irrigated land, all irrigation organizations, primary and supplemental irrigation combined.

45dollars...	495,970,922	471,031,972	50,694,304	30,000

¹382,419 acre-feet from D. B. No. II-A-6, Oregon; 4,614 acre-feet from D. B. No. II-A-7, Oregon.

²Water was transferred to the basin and released to natural stream channel in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

47 NEW CAPITAL INVESTMENT, 1950-1959									
48 Expenditures for additional new works and equipment for irrigation and drainage, Jan. 1, 1950-Dec. 31, 1959.....organizations.....	33	23	12	10	5	5	5	2	3
49 dollars.....	95,320,749	24,473,088	3,468,364	9,497,545	11,507,179	48,111,174	5,798,816	2,707,557	1,099,000

1,336,181 acre-feet from D. B. No. II-C-1, 99,163 acre-feet from D. B. No. II-E-3. 254,355 acre-feet from D. B. No. II-3-1c, 828,872 acre-feet from D. B. No. II-E-4.
 138,716 acre-feet from D. B. No. II-E-1b, 142,080 acre-feet from D. B. No. II-F-3. 415,651 acre-feet from D. B. No. II-E-1c, 5,185 acre-feet from D. B. No. II-E-1b.
 66,054 acre-feet from D. B. No. II-E-1c, 71,735 acre-feet from D. B. No. II-F-3. 628,239 acre-feet from D. B. No. II-G-6, 117,009 acre-feet from D. B. No. II-G-9, 14,748 acre-feet from D. B. No. II-G-10, 2,199 acre-feet from D. B. No. II-G-11, 4,825 acre-feet from D. B. No. II-G-13, 1,110 acre-feet from D. B. No. II-G-4. 7302,751 acre-feet from D. B. No. III-C-9, 103,996 acre-feet from D. B. No. II-C-7. Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State. 138,716 acre-feet to D. B. No. II-E-1c, 5,185 acre-feet to D. B. No. II-E-7. 1054,355 acre-feet to D. B. No. II-E-1b, 66,054 acre-feet to D. B. No. II-F-1, 795,497 acre-feet to D. B. No. II-F-3, 153,651 acre-feet to D. B. No. II-F-2. 11345,200 acre-feet to D. B. No. II-C-5, 138,034 acre-feet to D. B. No. II-E-3. 1275,245 acre-feet to D. B. No. II-E-3, 99,183 acre-feet to D. B. No. II-E-1a, 79,730 acre-feet to D. B. No. II-E-2. 142,080 acre-feet to D. B. No. II-E-1c, 71,735 acre-feet to D. B. No. II-F-1, 868,273 acre-feet to D. B. No. II-F-4.
 66,459 acre-feet to D. B. No. II-C-10, 39,794 acre-feet to D. B. No. II-C-12, 265 acre-feet to D. B. No. II-G-11.

NA Not available.

Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

D Data not shown to avoid disclosure of information for individual organizations.

NA Not available.

Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

NA Not available.

⁴Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

State Table 2.—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

Item (For definitions and explanations, see text)		Colorado, total,	Colorado River direct; Plateau Creek, Roaring Fork, Eagle River, Blue River, Muddy Creek, and Fraser River (IV-D- 1, 5-10)	San Juan and Dolores Rivers (IV-D-2, 4)	Green River (IV-E)	Gunnison River (IV-F)	Rio Grande River (V-C)	Arkansas River (VI-B)	North Platte River (VI-D)	South Platte River (VI-E)
WATER DELIVERED PER ACRE										
Organizations reporting no water from other sources used on same land:										
0.1 to 0.9 acre-feet per acre.....organizations.....										
1.0 to 1.9 acre-feet per acre.....organizations.....										
2.0 to 2.9 acre-feet per acre.....organizations.....										
3.0 to 3.9 acre-feet per acre.....organizations.....										
4.0 to 4.9 acre-feet per acre.....organizations.....										
5.0 to 5.9 acre-feet per acre.....organizations.....										
6.0 to 6.9 acre-feet per acre.....organizations.....										
7.0 to 7.9 acre-feet per acre.....organizations.....										
8.0 to 9.9 acre-feet per acre.....organizations.....										
10.0 or more acre-feet per acre.....organizations.....										
SIZE OF ORGANIZATION										
Size of organization (number of farm irrigation water users served directly):										
None.....organizations.....										
1 to 3.....organizations.....										
4 to 9.....organizations.....										
10 to 29.....organizations.....										
30 to 99.....organizations.....										
100 to 299.....organizations.....										
300 to 999.....organizations.....										
1,000 or more.....organizations.....										
Size of organization (acre-feet of water delivered directly to farms):										
None.....organizations.....										
1 to 299 acre-feet.....organizations.....										
300 to 999 acre-feet.....organizations.....										
1,000 to 2,999 acre-feet.....organizations.....										
3,000 to 9,999 acre-feet.....organizations.....										
10,000 to 29,999 acre-feet.....organizations.....										
30,000 to 99,999 acre-feet.....organizations.....										
100,000 or more acre-feet.....organizations.....										
Size of organization (acre-feet of water conveyed):										
None.....organizations.....										
1 to 299 acre-feet.....organizations.....										
300 to 999 acre-feet.....organizations.....										
1,000 to 2,999 acre-feet.....organizations.....										
3,000 to 9,999 acre-feet.....organizations.....										
10,000 to 29,999 acre-feet.....organizations.....										
30,000 to 99,999 acre-feet.....organizations.....										
100,000 or more acre-feet.....organizations.....										

State Table 3.—LAND IRRIGATED BY SOURCE OF WATER, BY DRAINAGE BASINS: CENSUS OF 1959

	Item (For definitions and explanations, see text)	Colorado, total	Colorado River direct; Plateno Creek, Boaring Fork, Eagle River, Muddy Creek, and Fraser River (IV-D-1,5-10)	San Juan River and Delores River (IV-D-2, 4)	Green River (IV-E)	Gunnison River (IV-F)	Rio Grande River above Fort Quitman, Texas (V-G)	Arkansas River (VI-B)	Platte River excluding South Platte River (VI-D)	South Platte River above Gaming Station near Paxton, Nebraska (VI-E)

²Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

D Data not shown to avoid disclosure of information for individual organizations.

NA Not available.

Water was transferred to the basin and released to natural stream channels and excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

AVERAGE DELIVERY OF IRRIGATION WATER PER ACRE, 1959								
Per acre irrigated, as reported by irrigation organization:								
73	All organizations.....acre-feet...	2.3	4.1	5.0	...	1.3	1.6	1.5
74	Organizations reporting no water from other sources used on land served by the organization.....organizations...	6	49	7	...	57	116	25
75	acre-feet.....acre-feet...	2.5	4.3	5.0	...	1.5	1.7	1.6

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

State Table 2.—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

NA Not available.

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

D Data not shown to avoid disclosure of information for individual organizations.

NA Not available.

Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

75	Organizations reporting no water from other sources used on land served by the organization.....organizations...	64	113	67	13	62	76	13	...
76	Organizations reporting no water from other sources used on land served by the organization.....acre-feet.....	1.6	4.0	6.2	6.3	2.1	2.2	3.2	...

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

KANSAS-OKLAHOMA

(183)

*Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

NA Not available.

Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

State Table 2.—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

D Data not shown to avoid disclosure of information for individual organizations.

²Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

			acre-feet.....	1.2	2.1

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

OREGON

(277)

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

State Table 2.—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

Item (For definitions and explanations, see text)		Oregon, total	North Pacific Coast excluding Columbia River	Columbia River below Snake River	Snake River below Weiser, Idaho to King Hill, Idaho	Klamath River
			(I-A)	(I-B)	(I-E and I-F)	(II-A)
WATER DELIVERED PER ACRE						
Organizations reporting no water from other sources used on same land:						
1	0.1 to 0.9 acre-feet per acre.....organizations...	28	8	2	13	...
2	acres irrigated.....	20,602	780	460	12,856	...
3	1.0 to 1.9 acre-feet per acre.....organizations...	90	19	18	39	3
4	acres irrigated.....	80,036	2,391	18,090	30,658	18,461
5	2.0 to 2.9 acre-feet per acre.....organizations...	127	24	20	62	14
6	acres irrigated.....	221,968	27,362	9,935	28,656	149,003
7	3.0 to 3.9 acre-feet per acre.....organizations...	132	29	27	53	18
8	acres irrigated.....	162,184	9,505	19,705	34,836	85,938
9	4.0 to 4.9 acre-feet per acre.....organizations...	84	13	24	46	1
10	acres irrigated.....	167,226	2,838	61,833	101,075	1,480
11	5.0 to 5.9 acre-feet per acre.....organizations...	37	5	13	18	1
12	acres irrigated.....	63,509	1,294	9,301	51,454	1,460

65	AVERAGE DELIVERY OF IRRIGATION WATER PER ACRE, 1959	100	30,922	526,700	...	21,862	271,517	
Per acre irrigated, as reported by irrigation organization:								
66	All organizations.....acre-feet...	1.9	2.4	3.0	2.5	2.7	3.5	
67	Organizations reporting no water from other sources used on land served by the organization.....organizations...	374	405	64	171	163	28	
68	Water delivered.....acre-feet...	1.9	2.5	3.1	2.6	2.9	3.6	

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

IRRIGATION OF AGRICULTURAL LANDS

NA Not available. ¹64,756 acre-feet from D. B. No. 1, 670,100 acre-feet from D. B. No. 2. ²Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

78	acre-feet.....acre-feet...	3.4	4.2	4.3	4.5	3.1	4.4	7.0	...

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

AVERAGE DELIVERY OF IRRIGATION WATER PER ACRE, 1959								
73	Per acre irrigated, as reported by irrigation organization:							
74	All organizations.....acre-feet...	1.3	4.0	4.1	3.2	4.1	3.7	(D)
75	Organizations reporting no water from other sources used on land served by the organization.....organizations...	81	37	12	36	45	14	3
76	Water delivered.....acre-feet...	3.9	4.1	3.7	3.1	4.1	3.7	(D)

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

WYOMING

(367)

65 acre-feet per acre...	2.5	2.5	2.0	2.4	3.7	1.9

¹Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

State Table 2.—NUMBER AND CHARACTERISTICS OF IRRIGATION ORGANIZATIONS, BY TYPE OF ORGANIZATION, TYPE OF SERVICE, QUANTITY OF WATER DELIVERED PER ACRE, AND SIZE OF ORGANIZATION, BY DRAINAGE BASINS: CENSUSES OF 1959 AND 1950—Continued

D Data not shown to avoid disclosure of information for individual organizations.

NA Not available.

*Water was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

75	acres irrigated.....	3.6	3.8	4.1	3.7	1.8	2.1	2.1	...

^aWater was transferred to the basin and released to natural stream channels in excess of the quantity of surface water withdrawn by irrigation organizations. The net effect was to increase the available surface water supply in the basin or State.

APPENDIX

(393)

This census is authorized by Act of Congress, United States Code, Title 13, Sections 5, 9, 142, 221, 223, 224, requiring that the information be answered completely and accurately, and guaranteeing that the information furnished will be accorded confidential treatment. The census report cannot be used for purposes of taxation, investigation, or regulation.

Budget Bureau No. 41-507
Approval expires December 31, 1960

I-1 No. U.S. DEPARTMENT OF COMMERCE—BUREAU OF THE CENSUS
PARSONS, KANSAS
IRRIGATION REPORT
I-1 CENSUS OF IRRIGATION 1959

Section I—NAME AND TYPE OF ORGANIZATION

1. Name of organization _____

2. By what other name is this organization known? _____ None ☐

Other names _____

3. Is this organization (Mark one):
(a) Unincorporated mutual or unincorporated cooperative? ☐
(b) Incorporated mutual or incorporated cooperative? ☐
(c) Irrigation district? ☐
(d) A farm or ranch? ☐
(e) Operated by the U.S. Bureau of Reclamation? ☐
(f) Operated by the U.S. Bureau of Indian Affairs? ☐
(g) City or town? ☐
(h) Other? (Describe) _____ ☐

Section II—WATER USERS AND ACRES SERVED IN 1959

4. How many water users were served by this organization in 1959? _____ None ☐ Number _____
Of these water users, how many were—
(a) Farm or ranch irrigation water users? _____ None ☐ Number _____
(b) Residential or domestic users? _____ None ☐ Number _____
(c) Other? (Describe under REMARKS) _____ None ☐ Number _____

Add water users in (a), (b), and (c) and enter total here _____

5. How many acres of farm and ranch lands were served by this organization in 1959? _____ None ☐ Acres _____
(This should be the area for which water users reported in 4(a). Do not include acres of land in 1959 that were not irrigated or were not entitled to receive water in 1959.)

6. How many of these acres (reported in question 5) were actually irrigated in 1959 with water from this organization? _____ Acres _____
(b) Or, if acres cannot be given for question 6(a), what percent of these acres was actually irrigated in 1959 with water from this organization? _____ Percent _____

Section III—SUPPLY OF WATER IN 1959

7. Did this organization obtain water in 1959
(a) From surface sources (i.e. from streams, lakes, reservoirs and drainage ditches) by diversion or pumping by this organization? No ☐ Yes ☐
(b) From ground water sources (i.e. from pumped wells, flowing wells, and springs) by this organization? No ☐ Yes ☐
(c) From a canal, pipe, or reservoir operated by another organization? No ☐ Yes ☐
If "Yes" for (c), give name and address below _____

Name _____ County _____
Post Office _____ State _____

INSTRUCTIONS for question 8: Give quantity of water obtained from each source in either acre-feet or millions of gallons in "A" below. If quantity cannot be given in these units, give rate of flow in one of the units shown under "B" and the duration of flow. If measurements are not available, make the best possible estimate and explain under REMARKS how your estimates were made.

Report actual amounts of water conveyed during 1959 in canals or pipes operated by this organization regardless of ownership of the water or water rights or whether payment was made for the water. Omit any water used only for hydroelectric power.

If water was stored in a reservoir: (1) Report in 8(a) the amount diverted from the reservoir directly into canals or pipes (except for hydroelectric power). (2) Do not include any releases down stream below a reservoir. (3) If water was diverted from a stream below a reservoir, report in 8(a) the amount diverted from the stream, not the amount released from the reservoir.

Section IV—DISPOSITION OF WATER IN 1959

10. How much water was disposed of in 1959 by—
(a) Delivery to individual users for irrigation of farm and ranch lands? (For acres reported in question 6) _____ %
(b) Delivery to individual users for domestic or residential use? _____ %
(c) Delivery to other users or for other uses? (Describe under REMARKS) _____ %
(d) Spillback, seepage, and water returned to streams and drainage ditches? _____ %
(e) Conveyance loss? (Seepage and evaporation from canals, and wasteage not returned to streams. Do not include losses before water was received by this organization, after delivery to users, or losses in reservoirs.) _____ %
(f) Total water disposed of? _____ 100%
(Add quantities for (a), (b), (c), (d), and (e) above. This total should be the same as the total for 8(d).)

11. What percent of the water delivered to individual users for irrigation of farm and ranch lands (reported in 10(a)) was measured at the point of delivery by weir, flume, meter, or other measuring device? _____ %
12. Is there an entry for conveyance loss for question 10(e) above? No ☐ Yes ☐
(a) If "No," why was there no conveyance loss? _____

13. (a) Was any water from other sources or other organizations also used in 1959 to irrigate the same farm and ranch land to which water was delivered directly by this organization? No ☐ Yes ☐
If "Yes"—
(b) Approximately what percent of the total amount of water used to irrigate this land in 1959 was delivered by this organization? _____ %

14. What was the average amount of water, from all sources, used per acre irrigated in this farm and ranch land to which water was so delivered by this organization? _____ (Acre-feet per acre)

Section V—LOCATION OF SOURCES OF WATER AND FARM AND RANCH LANDS SUPPLIED WITH WATER, 1959

15. What is the name of stream or lake from which water was obtained? _____

16. What is the location of point (or points) at which water was obtained? (Describe location by giving section, township, and range, if known, or describe by referring to the location and distance from a nearby town or some point such as an important highway. If water was diverted from a stream below a reservoir, report name of stream and location of diversion point, not the reservoir.)

Section _____ Township _____ Range _____ Section _____ Township _____ Range _____

Other description _____

Section VI—QUANTITY OF WATER OBTAINED

8. How much water was obtained in 1959 from—
(a) Surface sources? (See 7(a). Include diversion from, but not flow into, reservoirs.)
(b) Ground-water sources? (See 7(b).)
(c) Another organization? (See 7(c).)
(d) Total water obtained? (Add quantities for (a), (b), and (c).)

Section VII—RATE AND DURATION OF WATER FLOW

A Quantity of water
B Rate and duration of water flow

Acre-feet	Million gallons	Gallons per minute	Cubic feet per second	Other's inches	Duration (number of days)

[illegible]

QUESTIONNAIRE

Form 16-2 (10-3-55)	This census is authorized by Act of Congress, United States Code, Title 13, Sections 5, 9, 142, 221, 223, 224, requiring that the inquiries be answered completely and accurately, and guaranteeing that the information furnished be accorded confidential treatment. The census report cannot be used for purposes of taxation, investigation, or regulation.	Budget Bureau No. 41-087 Approval expires December 31, 1960
I-2 No.	U.S. DEPARTMENT OF COMMERCE—BUREAU OF THE CENSUS PARSONS, KANSAS IRRIGATION REPORT I-2 CENSUS OF IRRIGATION 1959	DEFINITION: An irrigation organization is a group of two or more water users, a company, a corporation, or a governmental district or agency that operates facilities to supply water for irrigation of farm or ranch lands. It may be either a formal, legal organization or an informal or cooperative arrangement.
Please enter any explanation, for any question, under REMARKS		
Section III.—SUPPLY AND DISPOSITION OF WATER IN 1959—Continued		
1. Name of organization	8. How much water was obtained in 1959—	
2. By what other name is this organization known? None <input type="checkbox"/> Other names _____	(a) From surface sources (i.e. from streams, lakes, reservoirs and drainage ditches) by diversion or pumping by this organization? _____ Acre-feet	
3. Is this organization— (Mark one)	(b) From ground water sources (i.e. from pumped wells, flowing wells, and springs) by this organization? _____	
(a) Unincorporated mutual or unincorporated cooperative? <input type="checkbox"/>	(c) From a canal, pipe, or reservoir operated by another organization? _____	
(b) Incorporated mutual or incorporated cooperative? <input type="checkbox"/>	(Give name, address, and quantity obtained from each, below)	
(c) Irrigation district? <input type="checkbox"/>	Name _____	
(d) Operated by the U.S. Bureau of Reclamation? <input type="checkbox"/>	Address _____	
(e) Operated by the U.S. Bureau of Indian Affairs? <input type="checkbox"/>	Name _____	
(f) City or town? <input type="checkbox"/>	Address _____	
(g) Other? (Describe) <input type="checkbox"/>	(d) Total water supply obtained from all sources _____	
(Add quantities for (a), (b), and (c).)		
9. What percent of water from each source was measured by weir, flume, meter, or other measuring device—		
(a) Water from surface sources? _____ %		
(b) Water from ground sources? _____ %		
(c) Water from another organization? _____ %		
10. How much water was disposed of in 1959 by—		
(a) Delivery directly to individual users for irrigation of farm and ranch lands? _____ Acre-feet		
(b) Delivery directly to individual users for domestic or residential use? _____		
(c) Delivery to other irrigation organizations? _____		
(Be sure to report for each organization for which the answer is checked "Yes" in the shaded square in question 4. Give name, address, and quantity of water delivered to each irrigation organization.)		
Name _____		
Address _____		
Name _____		
Address _____		
(If more than two, list others under REMARKS)		
(d) Delivery to other users or for other uses? _____		
(Describe under REMARKS)		
(e) Spillback, wastage, and water returned to streams and drainage ditches? _____		
(f) Conveyance loss? _____		
(Seepage and evaporation from canals, and wastage not returned to streams. Do not include losses before water was received by this organization, losses after delivery to users, or losses in reservoirs.)		
(g) Total water disposed off? _____		
(Add (a), (b), (c), (d), (e), and (f). This total must equal total water supply as reported in question 8(d).)		
11. What percent of the water delivered to individual users for irrigation of farm and ranch lands (reported in 10(a)) was measured at the point of delivery by weir, flume, meter, or other measuring device? _____ %		
12. What percent of water delivered to other irrigation organizations (reported in 10(c)) was measured at point of delivery? _____ %		
(List in REMARKS, organizations to which water was measured.)		
13. (a) Is there an entry for conveyance loss for question 10(f) above? No <input type="checkbox"/> Yes <input type="checkbox"/>		
(b) If "No," why was there no conveyance loss?		
14. (a) Was any water from other sources or other organizations also used in 1959 to irrigate the same farm and ranch land to which water was delivered directly by this organization? No <input type="checkbox"/> Yes <input type="checkbox"/>		
(If "Yes"—		
(b) Approximately what percent of the total amount of water used to irrigate this land in 1959 was delivered by this organization? _____ %		
15. What was the average amount of water, from all sources, used per acre irrigated on this farm and ranch land to which water was delivered directly by this organization? _____ /10		
(Acre-feet per acre)		

Form 16-2

(10-3-55)

I-2 No.

 U.S. DEPARTMENT OF COMMERCE—BUREAU OF THE CENSUS
 PARSONS, KANSAS
 IRRIGATION REPORT

 I-2
 CENSUS OF IRRIGATION 1959

Section I.—NAME AND TYPE OF ORGANIZATION

1. Name of organization

2. By what other name is this organization known? None ☐

Other names _____

3. Is this organization— (Mark one)

(a) Unincorporated mutual or unincorporated cooperative? ☐(b) Incorporated mutual or incorporated cooperative? ☐(c) Irrigation district? ☐(d) Operated by the U.S. Bureau of Reclamation? ☐(e) Operated by the U.S. Bureau of Indian Affairs? ☐(f) City or town? ☐(g) Other? (Describe) ☐

INSTRUCTIONS for Sections II and III: All questions relating to water obtained and water delivered refer to physical flow of water during 1959 in the facilities operated by this organization, regardless of the ownership of the water or water rights, or whether payment was made for the water. Report any water physically delivered to facilities operated by another organization. Do not report transfers of water rights not accompanied by physical flow of water between the facilities of this organization and those of another.

Section II.—WATER USERS AND ACRES SERVED IN 1959

4. Water delivered to other irrigation organizations:

(a) Did the organization deliver any water for the irrigation of farm and ranch lands in 1959 through laterals which were operated or maintained by others? No ☐ Yes ☐

If "Yes"—

(1) Did any of these laterals receive cash payments from the owners or operators of farm or ranch lands? No ☐ Yes ☐(2) Did any of the laterals obtain water from any other source? No ☐ Yes ☐

(If in doubt in regard to answers for questions (1) and (2), indicate "Yes.")

(b) Did this organization deliver any water to any other irrigation organization in 1959? No ☐ Yes ☐

If the answer is "Yes" for any of the questions in the shaded square—Consider organizations for which "Yes" is checked as other irrigation organizations to which water is delivered by this organization. List these organizations in question 10(c). (Include any organization, except an individual farm, which delivered any water for farm or ranch irrigation, even if irrigation is not the main purpose of the organization.)

5. Water users served:

(a) How many water users were served directly by this organization in 1959? None ☐ Number _____

(Do not include water users served through other organizations for which "Yes" is checked in the shaded square in question 4.)

Of these water users, how many were—

(b) Farm or ranch irrigation water users? None ☐ Number _____(c) Residential or domestic users? None ☐ Number _____(d) Other? (Describe) None ☐ Number _____

Add water users in (b), (c), and (d) and enter total here _____

6. How many acres of farm and ranch lands were served directly by this organization in 1959? None ☐ Acres _____

(This should be the area for which water users reported in 5(b) did receive or were entitled to receive water in 1959. Do not include land of nonfarm water users or of water users to whom the water was delivered through other organizations for which "Yes" was checked in the shaded square in question 4.)

7. (a) How many of these acres (reported in 6) were actually irrigated in 1959 with water from this organization? _____ Acres

(b) Or, if acres cannot be given for 7(a), what percent of these acres was actually irrigated in 1959 with water from this organization? _____ Percent

Section III.—SUPPLY AND DISPOSITION OF WATER IN 1959

INSTRUCTIONS for Section III: Give quantity of water obtained from each source in acre-feet. If measurements are not available, make the best possible estimate and explain under REMARKS how your estimates were made.

Report actual amounts of water conveyed during 1959 in canals or pipes operated by this organization regardless of ownership of the water or water rights, or whether payment was made for the water. Omit any water used only for hydroelectric power.

If water was stored in a reservoir: (1) Report in 8(a) the amount diverted from the reservoir directly into canals or pipes (except for hydroelectric power). (2) Do not include any releases down stream below a reservoir. (3) If water was diverted from a stream below a reservoir, report in 8(a) the amount diverted from the stream, not the amount released from the reservoir.

Section IV.—LOCATION OF SOURCES OF WATER AND POINTS OF DELIVERY TO OTHER ORGANIZATIONS

INSTRUCTIONS: Describe location by section, township, and range, if known, or describe by referring to the direction and distance from a nearby town or some point such as an important highway.

16. What is the location of the point or points at which water was received into the works of this organization—

(a) From **surface sources** (i.e., from streams, lakes, reservoirs, drainage ditches), by diversion or pumping **by this organization** (water reported in question 8(a))?

(1) Give name of **surface source** _____

(If water was diverted from a stream below a reservoir, report name of stream and location of diversion point, not the reservoir.)

(2) Give location of diversion points.

1 Sec. __, T __, R __ 2 Sec. __, T __, R __ 3 Sec. __, T __, R __

or other description _____

(b) From **another organization**. (Water reported in question 8(c).)

1 Sec. __, T __, R __ 2 Sec. __, T __, R __ 3 Sec. __, T __, R __

Other description _____

17. What is the location of points at which this organization delivered water to other irrigation organizations (named in question 10(c))?

1 Sec. __, T __, R __ 2 Sec. __, T __, R __ 3 Sec. __, T __, R __

Other description _____

Section V.—EXPENDITURES FOR WORKS AND EQUIPMENT, 1950-59

18. How much was spent by this organization for additional new works and equipment for irrigation and drainage between January 1, 1950, and December 31, 1959? None ☐ \$ _____/00

(Include expenditures for **new** construction, enlargement, or improvement of works, or for purchase of **additional new** equipment. Include only that portion of the cost of multiple-purpose works chargeable to the irrigation and drainage of farm and ranch lands, and the portion financed by this organization of the cost of works built jointly with another organization. **Do not include** expenditures for repairs and replacements, operation and maintenance, payments for works constructed before 1950, purchase of stock or shares in another irrigation organization, or contracts or payments for the purchase of works constructed by the U. S. Bureau of Reclamation or any other irrigation organization.)

REMARKS and explanations (please give question number to which remarks or explanations relate) _____

REMARKS—Continued _____

Form 16-1-2
4-5-59

Section VI.—CENSUS ENUMERATOR'S RECORD

19. In what state and drainage basin (or basins) are the following located—

(a) **Farm and ranch lands** served directly by this organization (question 6)?
(Ask respondent to show you this service area on your enumerator's map.)

State _____

Drainage basin _____

(b) **Sources of water** to this organization (question 16)?

(c) **Points of delivery** to other organizations (question 17)?

Note: If (a), (b), and (c) are located in more than one State or drainage basin, this is an interbasin organization. See Enumerator's Instructions for section VI.

20. Name and address of person who should be consulted if questions arise concerning this report.

Name _____ Title or relationship to organization _____

Business address _____ Telephone No. _____

Post Office _____ County _____ State _____

Enumerated by _____

Signature _____ Date _____ Questionnaire No. _____

Section III.—SUPPLY AND DISPOSITION OF WATER IN 1959

INSTRUCTIONS for Section III: Give quantity of water obtained and disposed of in each drainage basin in acre-feet. If measurements are not available, make the best possible estimates. **Determine drainage basins** from census enumerator's maps. Report sources (and deliveries) of water in the basin in which the water enters (or leaves) canals or pipes operated by this organization. For every item, the sum of entries for individual basins should equal the total for that item for all basins.

Water to be included: Report actual amounts of water conveyed during 1959 in facilities operated by this organization regardless of ownership of water or water rights, or whether payment was made for the water. Report all water transferred in a canal or pipe from one drainage basin to another for any purpose. **Omit** water diverted or received **only** for **hydroelectric power**, unless transferred to another basin. Any other discharge of water from a canal or pipe into a natural stream or drainage ditch should be reported under 9(c).

Reservoirs: (1) Do not report any water released into the stream channel from an on-stream reservoir. (2) If water was diverted from a stream below a reservoir, consider the stream rather than the reservoir as the source of water, and report the amount diverted from the stream in the basin where diverted. (3) Water taken from a reservoir directly into a canal or pipe should be reported as diverted from the reservoir. If a reservoir operated by this organization received only natural inflows, report the amount diverted from the reservoir under 8(a). If water was conveyed into a reservoir in pipes or canals, report this inflow in 8(h), the source of the water under 8(a), (b), (c), or (e), and the diversion from the reservoir under 8(i).

See enumerator's instructions for further explanations

8. Water obtained in 1959 in each drainage basin—

- (a) From **surface sources** (i.e., from streams, lakes, reservoirs, drainage ditches) by diversion or pumping by this organization
- (b) From **ground water sources** (i.e., from **pumped wells, flowing wells, and springs**) by this organization
- (c) From canal, pipe, or reservoir operated by **another organization** (total reported in question 4)
- (d) **Total water obtained** by this organization in each basin (a + b + c)

Quantity of water in acre-feet				
Totals, all basins	D.B. No.	D.B. No.	D.B. No.	D.B. No.

Interbasin transfers—

- (e) **Plus water imported** to each basin in works operated by this organization
(Give quantity entering basin at drainage basin boundary.)
- From which drainage basin
- (f) **Minus water exported** from each basin in works operated by this organization
(Give quantity at drainage basin boundary.)
- To which drainage basin
- (g) **Equals water supply** for storage or disposition by this organization in each basin (d + e - f)

From D.B. No.	From D.B. No.	From D.B. No.	From D.B. No.

Off-stream storage—

- (h) **Less water obtained** (included in 8(a), (b), (c), or (e) above) and **conveyed into reservoirs** operated by this organization
- (i) **Plus water diverted** from the same reservoirs into canals or pipes
- (j) **Equals total water supply** for disposition by this organization in each basin (g + h + i)

9. Water disposed of in 1959 in each drainage basin by—

- (a) Delivery directly to **individual users for irrigation** of farm and ranch lands
(Acres reported in question 7.)
- (b) Delivery directly to **individual users for domestic or residential use** (Water users reported in question 6(b)(2).)
- (c) Delivery to **other irrigation organizations**, in basin where delivered to works operated by the other organization, reported in 5(c)
- (d) Delivery to **other users** or for **other uses**
(Describe under REMARKS.)
- (e) Release from a canal or pipe to a **stream or drainage ditch** (Include wastage, spillback, or release for downstream diversion.)
- (f) **Conveyance loss** within each drainage basin (Seepage and evaporation from canals and wastage not returned to streams. Do not include losses before water was received by this organization, losses after delivery to users or to other organizations, or losses in reservoirs.)
- (g) **Total water disposed of** by this organization in each basin (a + b + c + d + e + f)
(These totals must equal total water supply for disposition (question 8(j)) in each basin.)

10. What percent of the water from each source (questions 8(a), (b), and (c) above) was measured by weir, flume, meter, or other measuring device—

- (a) Water from surface sources? %
- (b) Water from ground sources? %
- (c) Water from another organization? %
(If entry is not 100% for each of questions 10(a), (b), and (c), explain under REMARKS. (1) What percent of each was measured in each drainage basin, (2) how each unmeasured quantity was estimated.)

11. What percent of the water delivered to individual users for irrigation of farm and ranch lands, reported in 9(a), was measured at the point of delivery by weir, flume, meter, or other measuring device? %

(If entry is not 100%, explain under REMARKS: (1) What percent was measured in each drainage basin, and (2) How unmeasured quantities were determined.)

12. What percent of water delivered to other irrigation organizations, reported in 9(c) was measured at point of delivery? %

(If entry is not 100%, explain under REMARKS how each quantity in question 9(c) was estimated.)

13. (a) Is there an entry for conveyance loss for question 9(f) for each drainage basin? No ☐ Yes ☐

(b) If "No," why was there no conveyance loss?

14. (a) Was any water from other sources or other organizations also used in 1959 to irrigate the same farm and ranch land to which water was delivered directly by this organization? No ☐ Yes ☐

If "Yes"—
(b) Approximately what percent of the total amount of water used to irrigate this land in 1959 was delivered by this organization? %
(If different in each basin, give the percent for each under REMARKS.)

15. What was the average amount of water, from all sources, used per acre irrigated on the farm and ranch land to which water was delivered directly by this organization? /10
(If different in each basin, give amount for each under REMARKS.)

QUESTIONNAIRE

Section IV.—LOCATION OF WORKS OPERATED BY THIS ORGANIZATION

Mark the following with colored pencil on the census enumerator's map or other suitable map of the enterprise. Under REMARKS, list the map used for this organization. (See enumerator's instructions.)

16. Sources of water obtained by this organization—

- (a) From surface sources (i.e., streams, lakes, reservoirs, drainage ditches) by diversion or pumping *by this organization* (water reported in question 8(a)). Label S₁, S₂, etc.

Give name of surface source or sources.

S₁ _____

S₂ _____

- (b) From another organization, at point where water enters works operated by this organization. Label R₁, R₂, etc., as reported in question 4(b).

17. Points of diversion from off-atream storage operated by this organization for which amount diverted is given in question 8(i). Label O₁, O₂, etc. Give name of reservoir.

O₁ _____

18. Points where water is delivered to works operated by other irrigation organizations. Label D₁, D₂, etc., as reported in question 5(c).**19. Area served directly by this organization.**

Outline and shade in color the area within which water is delivered directly to individual farm and residential water users (as reported in question 6(b)).

Section V.—EXPENDITURES FOR WORKS AND EQUIPMENT, 1950-59

20. How much was spent by this organization for additional new works and equipment for irrigation and drainage between January 1, 1950, and December 31, 1959, in each drainage basin? _____ None ☐ \$ _____/00

Total all basins	D. B. No. _____	D. B. No. _____	D. B. No. _____

Report by drainage basin according to the basin in which the new works and equipment are physically located.

(Include expenditures for new construction, enlargement, or improvement of works, or for purchase of additional new equipment. Include only that portion of the cost of multiple-purpose works chargeable to the irrigation and drainage of farm and ranch lands, and the portion financed by this organization of the cost of works built jointly with another organization. Do not include expenditures for repairs and replacements, operation and maintenance, payments for works constructed before 1950, purchase of water rights, land, or stock or shares in another irrigation organization, or contracts or payments for the purchase of works constructed by the U.S. Bureau of Reclamation or any other irrigation organization.)

PREFACE

Volume IV—Drainage of Agricultural Lands—presents the results of the 1960 Census of Drainage. Data were collected for both organized drainage projects and for individually owned tracts, provided 500 or more acres of land were benefited for agriculture by installed works. The information was collected by both mail and field enumeration from officials and records of organized projects, from county and court records, and from individuals who had knowledge of known projects.

The 1960 Census of Drainage was taken in conformity with the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13, United States Code.

The planning of the census and the compilation of the statistics, in large measure, were carried on by Hilton E. Robison, Drainage Statistician, under the supervision of Ray Hurley, Chief, Agriculture Division. Assistance was given by Warder B. Jenkins, Assistant Chief, William B. Kauffman, Henry A. Tucker, and Helen D. Turner. The field canvass was conducted under the supervision of Robert B. Voight, then Chief, Field Division, by enumerators trained by employees of the Agriculture Division. The maps were prepared under the supervision of William T. Fay, Geographer.

Acknowledgment is made of the technical assistance of a Special Federal Agency Committee—1959 Censuses of Irrigation and Drainage—and of the central office and local personnel of the United States Soil Conservation Service.

December 1961

UNITED STATES CENSUS OF AGRICULTURE: 1959

FINAL REPORTS

Volume I—Counties—A separate part for each State. Statistics on number of farms; farm characteristics; acreage in farms; cropland and other uses of land; land-use practices; irrigation; farm facilities and equipment; farm labor; farm expenditures; use of commercial fertilizer; number and kind of livestock; acres and production of crops; value of farm products; characteristics of commercial farms, farms classified by tenure, by size, type, and economic class; and comparative data from the 1954 Census of Agriculture.

Volume I is published in 54 parts as follows:

Part	State or States	Part	State or States	Part	State or States
1	New England States:		West North Central—Continued		Mountain:
2	Maine.	19	South Dakota.	38	Montana.
3	New Hampshire.	20	Nebraska.	39	Idaho.
4	Vermont.	21	Kansas.	40	Wyoming.
5	Massachusetts.		South Atlantic:	41	Colorado.
6	Rhode Island.	22	Delaware.	42	New Mexico.
	Connecticut.	23	Maryland.	43	Arizona.
	Middle Atlantic States:	24	Virginia.	44	Utah.
7	New York.	25	West Virginia.	45	Nevada.
8	New Jersey.	26	North Carolina.		Pacific:
9	Pennsylvania.	27	South Carolina.	46	Washington.
	East North Central:	28	Georgia.	47	Oregon.
10	Ohio.	29	Florida.	48	California.
11	Indiana.		East South Central:	49	Alaska.
12	Illinois.	30	Kentucky.	50	Hawaii.
13	Michigan.	31	Tennessee.		Other Areas:
14	Wisconsin.	32	Alabama.	51	American Samoa.
	West North Central:	33	Mississippi.	52	Guam.
15	Minnesota.		West South Central:	53	Puerto Rico.
16	Iowa.	34	Arkansas.	54	Virgin Islands.
17	Missouri.	35	Louisiana.		
18	North Dakota.	36	Oklahoma.		
		37	Texas.		

Volume II—General Report.—Statistics by Subjects, United States Census of Agriculture, 1959. Summary data and analyses of the data by States, for geographic divisions, and for the United States, by subjects, as illustrated by the chapter titles listed below:

Chapter	Title	Chapter	Title
I	Farms and Land in Farms.	VII	Field Crops and Vegetables.
II	Age, Residence, Years on Farm, Work Off Farm.	VIII	Fruits and Nuts, Horticultural Specialties, Forest Products.
III	Farm Facilities, Farm Equipment.		
IV	Farm Labor, Use of Fertilizer, Farm Expenditures, and Cash Rent.	IX	Value of Farm Products.
V	Size of Farm.	X	Color, Race, and Tenure of Farm Operator.
VI	Livestock and Livestock Products.	XI	Economic Class of Farm.
		XII	Type of Farm.

Volume III—Irrigation of Agricultural Lands. Western States (Dry Areas)—Data by States for drainage basins and a summary for the area, including number and types of irrigation organizations, source of water, expenditures for works and equipment since 1950, water used and acres served for irrigation purposes.

Volume IV—Drainage of Agricultural Lands. Data by States on land in drainage organizations, number and types of organizations, cost of drainage and drainage works.

Volume V—Special Reports, Part I.—Horticultural Specialties. Statistics by States and a summary for the United States presenting number and kinds of operations; gross receipts and/or gross sales; sales of nursery products, flower seed, vegetables grown under glass, and propagated mushrooms; number of container-grown plants; inventory products; sales of bulb crops; employment; structures and equipment.

Titles of additional parts of this volume are not available as this report goes to press.

INTRODUCTION

DRAINAGE OF AGRICULTURAL LANDS

Presentation of data.—This volume presents statistics on drainage of agricultural lands collected in the 1960 Census of Drainage. The 1960 Census included drainage projects that were benefiting 500 or more acres of agricultural land. The statistics are for areas benefited, 1960, and for drainage operations for the 10-year period, 1950 through 1959. In the presentation selected comparative data are included for earlier censuses. In general, the censuses of drainage have primarily covered community or public drainage undertakings although individual ownership undertakings have been included if the area benefited met the minimum acres requirement.

Data are presented for counties, for States, and for the combination of States, which comprise the conterminous United States, in which drainage enterprises were reported. Maps are utilized to show the approximate location and boundaries of the areas receiving drainage benefits, as ascertained in 1960. Data for the conterminous United States are first presented in a series of summary tables and in an overall map. Several summary tables include information for States. These summary tables and the general drainage map are followed by the tabular data and a map for each State. Each State presentation is accompanied by detailed information for individual counties.

General discussion.—Agricultural drainage refers to the removal, by artificial means, of excess water to improve the condition of land used or to be used for agriculture. Excess water either in or on the soil—whether a temporary or a permanent condition—influences farm production, farm income, and farm values. Too much water in the soil adversely affects crop growth and the timely performance of operations such as tillage, seeding, cultivating, and harvesting including pasturing. Accumulation of excess water may come about from heavy local precipitation; from runoff from up-stream areas; from low-lying land in depressions, ponds, and lakebeds; from tidal action in coastal areas; from soil profiles which restrict subsoil drainage; from buildup of a high water table directly as a result of irrigation or from seepage; or from artesian or other underground movement of water.

Good management of land requires management of water. Drainage, irrigation, and flood control, all requiring management, often are interrelated. Large investments of capital have been made by the Federal government and other public or quasi-public organizations; by cooperating groups of individuals; or by single individuals to restrict, provide, or regulate water supplies. On the drainage side, Federal assistance has included measures which provide improved major drainage outlets which may be interrelated with flood control. Secondary drainage works and drainage improvements on private land have been usually undertaken by non-Federal interests, including private landowners. More recently, increased Federal drainage assistance has been available to local agencies, with some limitations, through the watershed protection and flood prevention program authorized under Public Law 566 of 1954 and amendments.

Drainage of land for agriculture has generally been recognized, directly or tacitly, as a public good. As a general rule, the drainage of an individual's land cannot be carried out without the construction of an artificial drain or the improvement of a natural watercourse which affects the land of other individuals. Usually, the improvement of an outlet drain benefits more than one farm

and the cost is greater than any individual wants to assume. Most States have passed laws permitting or encouraging the organization of public corporations or local improvement districts for this purpose.

Previous to the earliest acts for establishing public drains, a number of the States had recognized the right of every landowner to a drainage outlet by providing that an owner desiring drainage could apply to a designated official and upon payment of damages, if the necessity were proved, secure easement to construct and maintain a private drain across his neighbor's land. The drainage laws for the various States have given rise to two principal types of organization and to several minor types. The corporate district and the county drain are the principal types. The first is governed by its own officers, who either are elected by the residents or landowners of the district or are specially appointed by the authority which creates the enterprise. The county drain is established and constructed as any other public work or local improvement, the enterprise being managed by regular officers who have charge of all these enterprises in their county. Some enterprises are administered by a commission or board consisting of one or more officials of the county and one or more members selected by the owners of the land assessed for the cost of the drainage. The minor types of organizations include (1) township drains, which are similar in form to county drains but are controlled by officers of the townships; (2) State drainage projects, controlled by State officials, usually embracing some State land; (3) irrigation districts, similar in character to drainage districts, that have undertaken drainage of land in those districts; (4) commercial companies reclaiming and improving wetland for sale; (5) cooperative or mutual undertakings without formal corporate organization; and (6) individual landowners including farm partnerships and farm corporations.

Physiographic features and the amount of water that should be removed from both surface and subsoil have a direct bearing on the need for, and the nature of, drainage works. Drainage improvements can be in the nature of straightening and deepening natural water channels; construction or replacement of drains, both open and closed types; installation or use of pumps and drainage wells; construction or repair of levees, floodgates, culverts, and bridges; and land leveling. Millions of acres now in agricultural use have been fitted for crop or livestock production by one or more of the methods which hasten the removal of excess water. Some of the most productive lands of the Nation have been improved by drainage and the installation of a drainage work increases agricultural output.

Drainage problems still exist on many acres of farmland. Old or new techniques can make these lands more physically suitable for crops and pasture. A part of the lands still inadequately drained are interspersed with lands adequately provided with drainage. Often an organized drainage district or other collective drainage enterprise has provided the main channels and an outlet for water flow so that remaining works need only be installed by individual landowners. There are extensive areas of wetlands, without or within farm boundaries, without any artificial drainage, whatever, which can be physically improved for crops and pasture. It may be questionable whether it is advisable to make such lands fit for agriculture, or even to make all lands presently in farms fit for a higher type of agriculture,

by means of drainage. This is especially true in periods of farm surpluses. Often wildlife propagation and recreational activities may be more desirable alternative uses of wetlands. There are cases where the health of a community must be given consideration. No doubt the individual landowner usually visualizes some economic gain before he undertakes a drainage improvement. Economic as well as social factors need to be weighed to determine the feasibility and advisability of reclaiming land for farming. Prevailing costs and benefits have not always been sufficient to warrant the maintenance of drainage works after their installation. With the passage of time, it becomes difficult to say whether certain drainage works are still a benefit to agriculture.

History of the Census of Drainage.—Practically all drained agricultural lands lie within the boundaries of operated farms. Such lands may be either inside or outside the boundaries of an organized enterprise that provides drainage works for improving lands for agriculture. The drains and other works for control of water that a farmowner installs upon his own farm, either within or without the boundaries of an organized drainage enterprise, are likely to be either supplemental to or entirely independent of the works installed by an organized enterprise. Officials of an organized enterprise cannot be expected to know in detail the total acres drained or the nature of all drainage works, including those constructed by individual landowners, within the boundaries of their districts. Therefore, the first efforts at gathering information for drainage attempted the full coverage of drainage for farmlands, that is, drainage by both organized enterprises and by individual landowners.

Through the years, a varying amount of basic information has been obtained in respect to the amount and location of farmlands which have been improved by drainage, the type of organization under which drainage has been carried out, the kind of works installed, the purpose of the drainage, the adequacy of the drainage, the capital invested, and the financial situation of the enterprise established for carrying on drainage improvements. Recently, more emphasis is being placed on additions to the drained area in respect to acreage, physical works, and costs. It has been learned that many of the needed data concerning the extent and adequacy of drainage cannot be answered satisfactorily by local officials or individual landowners. Some organizations cease to function after the drainage work has been accomplished and, for farm drainage, the individual landowner either may be difficult to locate in the case of tenant-operated land or may not be in full possession of knowledge of drains long-established on his holdings.

The first census of drainage in the United States was taken in 1920. No provision for inquiries regarding drainage was made in any prior census. In 1920, some facts concerning drainage on farms were collected in the general census of agriculture, while those for drainage enterprises were obtained in a special canvass of those enterprises. Drainage enterprises were to comprise public and private corporations and local improvement districts organized to secure the drainage of land to be used for agricultural purposes; also government projects and other organizations engaged in extensive land drainage work. Questionnaires were obtained also for drainage undertakings, each to benefit 500 acres or more, by individual farmowners. Land furnished protection from overflow by levees, dikes, or embankments was not included unless some form of drainage works had been constructed on the protected land. The land in drainage enterprises was the acreage that had been or was to be benefited by drainage works constructed by the enterprises and, except in a few instances, was the land assessed to pay the cost of the enterprises. The exceptions were irrigation projects installing drains to benefit land damaged by seepage or by alkali as a result of the irrigation, and assessing the cost against the entire irrigation enterprise instead of against only the area needing drainage or protection. Under such circumstances the area thus assessed, but not need-

ing drainage, was omitted from the tabulations. Enterprise data were published for 34 States. No enterprises were found in Alabama, Virginia, West Virginia, or in the 11 States north of the Potomac River.

In 1930, a small amount of data was gathered from farm operators in the general census of agriculture in respect to drainage on farms. Figures were published for the number of farms reporting drainage and the acreage of farmland provided with drainage. A special questionnaire was utilized to cover organized drainage enterprises. Again, the term "drainage enterprise" was broadened to include a tract of farmland of 500 or more acres drained as a private undertaking without legal organization. The area of a drainage enterprise included all the land within the boundaries of the enterprise. It included all land assessed for the cost of the enterprise, and may have included land not assessed because exempted for special reasons. Where the drainage was performed by an irrigation district, that district was also the drainage enterprise. Drainage enterprise data were published for 35 States in 1930. These included Virginia in addition to the 34 States for which data were published in 1920.

Since 1930, no effort has been made to obtain drainage data on the general questionnaire for the census of agriculture. The acreage drained in a particular farm is largely a matter of opinion of the operator, particularly so in the case of a tenant-operator, as to the area actually benefited. The 1930 Drainage Report stated that both the number of farms reporting drainage and the acreage drained were doubtless too low, due to the fact that some enumerators failed to secure answers to the farm drainage questions on the general farm questionnaire.

The third census of drainage enterprises was taken in 1940. A drainage enterprise, for the 1940 Census of Drainage, was defined as the area (1) organized in one drainage district, or (2) assessed for the same public drain, or (3) in corporate or in private ownership drained by works operated as one undertaking. Privately owned enterprises draining less than 500 acres each were omitted from the census, but all enterprises established under State drainage laws were included. Drainage statistics were presented for 38 States. In addition to the 35 States for which enterprises had been found in the 1930 enumeration, enterprises were located in, and statistics were published for, Alabama, Delaware, and Maryland.

In the 1940 Census of Drainage Report, in the discussion of the classification by character of enterprise, mention was made of the difficulty of applying the definitions to distinguish between drainage districts and county drains in all States. In Iowa, for example, almost all of the enterprises were classed as county drains although by law they were named drainage districts. In several other States an enterprise with the term "district," as used locally or even in the statutes, was classified differently. It was said that the district form of organization, being under the management of its own officials, was generally considered more suited to the larger and more costly undertakings, as giving the landowners the greatest degree of local control. The county drain form, administered by county officials, was generally more economical in administrative costs for small enterprises in which the problems of engineering and financing are relatively simple. This form was most common in those States where drainage was promoted for improving land already in farms. The district form was general in those areas where reclamation and development of unimproved lands for making new farms had been an important consideration in promoting the drainage enterprises.

Prior to 1950, all organized drainage enterprises, regardless of size, were covered in each census of drainage. A report was obtained for each enterprise that had constructed drainage works which were still serving agricultural lands or that had contributed to the capital invested in existing works. All unorganized drainage operations on agricultural lands of 500 or more drained acres, conducted by individuals or cooperative groups, were also covered.

For 1950, it was decided to restrict the enumeration of drainage projects to drained agricultural areas of 500 acres or more, regardless of whether they were in an organized enterprise or represented a private operation. Consideration was given to both the expense and difficulty of gathering information for individuals or officials for small acreages of drained lands. These items are more pronounced for those enterprises which have been superseded. Many of the small enterprises had been superseded by later enterprises. For that reason it was decided, in advance of the 1950 Census date, to eliminate enterprises of less than 500 acres from the enumeration. For 1950, a special effort was made to obtain reports for cooperative or group drainage projects to which the Soil Conservation Service had rendered technical assistance.

The decision to limit the 1950 Census of Drainage to enterprises of 500 or more drained acres was based on the following facts. In 1940, there were 79,220 reports secured in the Census of Drainage. Many of these represented enterprises which had been superseded by later enterprises. Although these superseded enterprises were no longer in existence, the works which they had constructed were still serving to drain agricultural lands, or these enterprises had contributed to the capital invested in existing works. Of the 79,220 total, 41,690 were less than 500 acres in size. Of approximately 133 million acres in all enterprises in 1940, only 9 million acres were accounted for by enterprises under 500 acres. Thus, slightly more than half of the enterprises containing about seven percent of the land in enterprises were represented by these small operations. In 1940, about 87 million acres of land were drained. The difference between 133 million and 87 million represented lands which were drained by more than one enterprise. Considerably more than one-half of the land in enterprises of less than 500 acres was shown to be in overlapped enterprises. The exclusion of the very small enterprises had a material effect on the number of enterprises covered but had only a minor effect on the number of drained acres.

Prior to the 1950 Census of Drainage, a preliminary field test was conducted in Ohio, Indiana, and Illinois to determine whether a satisfactory method of enumerating overlapped drainage enterprises had been developed. It was learned that in most of the counties having county drains, there were county maps showing the land in drainage enterprises. These maps were usually prepared by the county engineer or other qualified person. The existing maps and the special knowledge of county engineers or surveyors as to the location of the drained lands could be used to best advantage if overlapped lands in enterprises could be eliminated from the enumeration. This elimination would greatly reduce the cost of both field and office work. It was decided to treat the drained lands of each county, in States having predominantly county drains, as a single enterprise. Thus, only one questionnaire would be filled per county in such States. Most of the overlapped enterprises, and also those under 500 acres, were in three States—Ohio, Indiana, and Michigan. The same economies which prompted the Census to use one questionnaire per county in these three States led to the use of a single questionnaire per county also in Delaware, Iowa, Kentucky, Minnesota, Oklahoma, North Dakota, and South Dakota. This group of ten States was designated as "county-drain" States, although in Delaware the predominant form of drainage organization was the drainage district. An abbreviated questionnaire was used in these "county-drain" States as contrasted with the reporting form used in the other so-called "drainage-district" States.

In 1950, the enumerators who were charged with the responsibility of securing a drainage questionnaire for irrigation enterprises having their own drainage were often unable to obtain the required information concerning the area and location of the lands benefited by drainage. They could not readily secure an allocation of cost, collections, and indebtedness for the drainage

works separately from the irrigation works. Because of this difficulty, the 1950 information concerning drained lands was supplemented by data secured on the questionnaire for the census of irrigation. In doing so, the restriction of 500 or more drained acres was not applied to irrigation enterprises having their own drainage.

Drainage enterprises were enumerated in 40 States in 1950. Enterprises were enumerated in New Jersey and New York for the first time. The eight States with no drainage enterprises, for the purpose of the census, were the six New England States, Pennsylvania, and West Virginia.

The 1960 Census of Drainage was the fifth of a nationwide series to obtain data in respect to removal of excess water from agricultural lands. After the 1950 experience, a change was considered necessary in the kind of data that could or should be secured in a drainage enumeration. Lands drained solely because of irrigation, to remove seepage water, or to prevent alkali accumulation, were excluded from the Census of Drainage. The theory underlying the change was that these irrigated lands were not first made available for agricultural use through the removal of excess water from naturally wetlands. (See discussion under "Scope of the 1960 Census of Drainage.")

Legal basis for the Census of Drainage.—Each of the five censuses of drainage has been authorized by an Act of Congress. "Title 13, United States Code—Census," codified in August 1954, and amended in August 1957, and September 1960, is now the legal basis for the censuses of agriculture and other censuses, and surveys conducted by the Bureau of the Census. Section 142, paragraph (b), made provision for the Census of Drainage, as follows:

"The Secretary shall, in conjunction with the census of agriculture directed to be taken in October 1959 and each tenth year thereafter, take a census of irrigation and drainage."

Section 5 of Title 13 made provision for the preparation of forms and questionnaires in this manner—

"The Secretary shall prepare schedules, and shall determine the inquiries, and the number, form and subdivision thereof, for the statistics, surveys, and censuses provided for in this title." Under authority granted by Section 4 of Title 13, the Secretary of Commerce delegated "the functions and duties imposed upon him by this title" to the Director of the Bureau of the Census.

ENUMERATION FORMS AND PROCEDURES

Preparatory work.—Within the framework of the Act providing for the 1960 Census of Drainage, the scope of the enumeration and the nature and content of the forms and procedures used for taking the census were determined by the staff of the Bureau. In making the decision as to which drainage projects to enumerate, the form of the questions to be asked, and the enumerative procedures to be followed, the staff gave consideration to the experience gained in earlier censuses and to the results of a pretest of the proposed questionnaire and procedures. Careful consideration was given to availability of data from other sources, the adequacy of the data that might be obtained, and the need for and the usefulness of the data.

Two special committees provided advice and counsel to the Bureau. A Special Federal Agency Committee, for the 1959 Censuses of Irrigation and Drainage, comprised representatives of the following agencies: Agricultural Conservation Program Service, Agricultural Research Service, Rural Electrification Administration, and Soil Conservation Service of the U.S. Department of Agriculture; Bureau of Indian Affairs and Bureau of Reclamation of the U.S. Department of the Interior; and the Bureau of the Census. A second Committee, the Special Advisory Committee for the 1959 Census of Agriculture, reviewed the later stages of the planning. This committee consisted of one repre-

representative from each of the following: Agricultural Publishers Association; American Association of Land-Grant Colleges and State Universities; American Farm Bureau Federation; American Farm Economic Association; American Statistical Association; Farm Equipment Institute; National Association of Commissioners, Secretaries, and Directors of Agriculture; National Council of Farmer Cooperatives; National Farmers' Union; National Grange; Rural Sociological Society; and the U.S. Department of Agriculture. A representative of the Bureau of the Budget was in attendance at all meetings of this Committee.

Scope of the 1960 Census of Drainage.—Since drainage of irrigated lands for the purpose of controlling alkali or seepage from irrigation generally represents an integral part of the operations performed by irrigation enterprises, such drainage was excluded in the 1960 Census. The 1950 experience had indicated the impracticability of apportioning financial data to drainage, as distinct from irrigation. Drainage for control of alkali or seepage from irrigation was excluded even in instances where the drainage was handled by a separate organization from that which provided the irrigation. In such cases the drainage organization was often a subsidiary of the irrigation organization and, even when not subsidiary, the organizations often shared facilities. Part or all of the maintenance was frequently handled by the irrigation organization. An attempt was made, however, to include drainage operations benefiting naturally wetlands even though such lands may have been irrigated.

The 1950 experience also led to the inclusion in 1960 of inquiries designed to identify extensive contiguous tracts within the project area that were either not being used for agriculture or were receiving no drainage benefits from the facilities provided.

The principle established in 1950 for the "county-drain" States of obtaining one report for all drains under one management was extended in 1960 to all States. The 1950 plan for "county-drain" States was modified to require separate reports for drainage projects under separate management.

The 1960 enumeration, as in 1950, included all projects which provided drainage benefits to 500 or more acres of agricultural lands. A project might represent an undertaking by a legally organized drainage district; by a special district organized primarily to provide some other service; by some other governmental unit; by an individual landowner, farm partnership, or farm corporation; or by a cooperative group of landowners controlling a joint undertaking or carrying out their respective portions of one overall plan.

For intercounty projects separate reports, as in prior censuses, were required for each county part in order to provide drainage data at the county level.

Projects for which the drains still were functioning were included even though the organization responsible for the drains no longer existed. An exception was made for projects taken over by a later organization. If, however, there had been any drainage activity by the superseded organization during the 10-year period, 1950-1959, it was also included.

Information was obtained on the area of the project and for drainage activities for the 10-year period since the preceding census. Where possible, information obtained for the project in 1950, such as the area in 1950 and the mapping of this area, was utilized in 1960 and only the activities and changes since 1950 were recorded by the enumerator in the 1960 enumeration. However, if the 1950 Census records were incomplete, or indicated a need for verification, or if the recorded information was found to be incorrect, the enumerator was required to disregard any information given him for the 1950 Census and to obtain complete information for the project for 1960.

Pretest of questionnaire and procedures.—A pretest of the questionnaire and field procedures was conducted in July 1959. Four counties were selected to provide a fairly representative

cross-section of the problems expected in the enumeration. Vanderburgh County, Indiana, and Henderson County, Kentucky, represented county-drain systems with drains under control of county officials. The county surveyor was directly responsible for county-drain work in Vanderburgh County, Indiana, and a county Board of Drainage Commissioners was responsible for the county ditches in Henderson County, Kentucky. Indiana and Kentucky were enumerated in 1950 as "county-drain" States, one questionnaire being used to enumerate all drainage projects in each county. Massac County and Gallatin County, Illinois, were selected as representative of "drainage-district" areas. For these two counties, each drainage district had its own officials with varied connections with the county government. Massac County was selected particularly to test the effectiveness and adequacy of the questionnaire and procedures for handling projects that extend into two or more counties. [The 1950 enumeration included 618 such projects, in all areas, accounting for 1,292 of the 6,132 reports (other than "irrigation enterprises") enumerated in the Census of Drainage] included in the tabulations for that year.] Gallatin County had projects of several types of organization. It offered experience in handling problems involving overlapping of projects, in obtaining information from a variety of sources, and in obtaining information for projects for which there was no longer any active management or person responsible.

Advance listing of drainage projects.—Just prior to the field enumeration for the 1960 Census of Drainage, a listing of drainage projects was prepared to insure reasonably complete coverage. This listing included the following:

1. All projects included in the 1950 tabulations.
2. Additional projects, listed or enumerated in 1950 but excluded from the tabulations, where there was a possibility that such projects might qualify for inclusion in 1960. These additional projects included those in the planning stage in 1950, projects started but not completed, and projects reported inactive for many years but which might have been restored.
3. Special purpose districts included in the 1952 and 1957 Censuses of Governments where the name or listed functions of the district indicated that the district might be providing drainage services to agricultural lands.
4. Projects ascertained by a mail canvass of "irrigation enterprises" reporting 500 or more acres of drained lands in the 1950 Census of Irrigation. (See "Canvass of irrigation enterprises.")
5. Projects listed by the Soil Conservation Service as having been undertaken since 1950. (See "Soil Conservation Service canvass.")
6. Projects listed by the State of Missouri as having been organized since January 1, 1950. (The Soil Conservation Service could provide no information on drainage activities for 77 Missouri counties.)

For each of these listed projects, the name of the organization was entered on a 1960 Drainage Questionnaire. In most instances, the Bureau was also able to enter the name and address of one or more persons who could be contacted regarding that project. The person listed was generally an official of the organization, or some other person who would have knowledge of the project. These questionnaires were given to the enumerator, in the respective area, in advance of the enumeration.

The listing was considered to be reasonably complete. The 1950 Census provided a reliable listing of projects in existence as of that date. Officials of the Soil Conservation Service were of the opinion that the listing provided by that organization could be relied upon for coverage of additional projects since the 1950 Census. The Soil Conservation personnel had rendered technical assistance for many of these projects. Since the area served by each local office of the Soil Conservation Service generally consists of only one or two counties, the local officials should have had knowledge of any additional drainage operation in their area that would have sufficient size for inclusion in 1960.

Enumerators were instructed to be on the lookout, in the counties assigned, for additional drainage activities that might qualify for inclusion in the census.

For counties for which no projects were prelisted, and counties for which the enumeration was conducted by mail (see "Mail canvass"), the enumeration coverage depended wholly on the advance listing.

Canvass of "irrigation enterprises."—To determine which "irrigation enterprises" included in the 1950 Census of Drainage qualified for inclusion in the 1960 Census of Drainage, a special questionnaire (Form D2) was mailed to each enterprise for which 500 or more acres of land were reported as provided with artificial drainage. This questionnaire determined—

1. The individual or the organization responsible for the drainage.
2. Whether the need for drainage was solely because of irrigation, or was intended to improve naturally wetlands.
3. Whether 500 or more acres were drained by constructed works.

Although the 1950 Census of Drainage report carried data for "irrigation enterprises having their own drainage," the 1950 Census of Irrigation questionnaire did not determine whether the organization, group, or person responsible for the irrigation was also responsible for the drainage of the land.

The mailing list was compiled from the 1950 Census of Irrigation reports and from incomplete 1950 Census of Drainage questionnaires representing "irrigation enterprises" having their own drainage works. The 1950 Census of Drainage included 796 "irrigation enterprises" enumerated in the Irrigation Census, with 500 or more acres of irrigated land reported as provided with artificial drainage. The mailing list, compiled on a county basis, consisted of 960 listings to be accounted for. A total of 1,683 mailings was made, including followups for nonresponses, requests for further information, and requests to new respondents named as responsible for the drainage activities.

Satisfactory information was obtained for 87.9 percent of the listings. For most of the others the identification or address was not sufficient to find a satisfactory respondent. Of those for which satisfactory information was obtained, approximately two out of three did not qualify for inclusion in the 1960 Census. For over half (54.2 percent) of those qualifying for inclusion, the drainage was by separately organized drainage districts. Nearly all of these separately organized districts represented projects already listed. Only 99 projects qualifying for inclusion in the 1960 Census of Drainage, and not already listed from other sources, were found as a result of this canvass of "irrigation enterprises."

Soil Conservation Service canvass.—At the request of the Bureau, the officials of the Soil Conservation Service, Washington, D.C., asked each of the State conservationists to require that their work unit conservationists prepare a list of drainage operations for each county in their respective areas.

The work unit conservationists were instructed to include "only projects that provide drainage benefits for approximately 500 or more acres of land for agriculture" and to include only "jobs completed or started since January 1, 1950." They were requested to include "all projects—group, individual, and public—irrespective of whether they received technical assistance from the Soil Conservation Service."

The listing form provided for the inclusion of the name of the project; the approximate acres benefited; whether the project represented a single farm, a cooperative or mutual, or a legally organized project; and the name and address of the person or persons who might be contacted for information concerning the physical works and costs, and for maps or plats. Facsimiles of the listing form and of the covering memorandum are included in the appendix.

The projects for which lists were received totalled 4,602 for 610 counties. For each of the other counties, except for 77 counties in Missouri for which officials of the Soil Conservation Service were unable to provide information, either a listing form checked "No projects" or a memorandum stating there were no such projects, was received.

As a result of this prelisting of projects by the Soil Conservation Service, 2,935 projects were added to the Census lists. Of the 9,298 drainage projects (county count) in 1960, more than one-fourth (2,456) represented projects that had been added to the advance listing as a result of the Soil Conservation Service canvass. Of the 4,602 projects listed in the Soil Conservation Service canvass, 2,146 represented projects already listed by the Census, or projects that were found as not qualifying for inclusion.

In the field enumeration, further information obtained from the Soil Conservation Service local offices accounted for a large proportion of the 532 additional projects found by Census enumerators.

The drainage questionnaire.—For the 1960 Census, the same questionnaire form (D1) was used for all States. A facsimile of this questionnaire appears in the appendix.

In the arrangement and design of the questionnaire, consideration was given to the use of the form for self-enumeration, maximum use of 1950 information as a guide to the enumerator, simplification in the enumeration, and for the office processing of the data.

The name of the State and county were placed at the beginning of the questionnaire, since they assisted in the identification of a project. For intercounty projects, the portion in each county was enumerated separately and the inquiries, therefore, referred only to the portion within the specified county.

Section I provided for the identification and organization of the project. For all prelisted projects, the identification was entered in advance of the assignment for enumeration. Other inquiries related to the type of organization, the period in which the project or organization was started, and, if an intercounty project, the names of the other counties in which the project lands were situated.

Supplementary information, useful in the processing of the data, was sought through inquiries on whether there was active management of the project, and, if not, whether the project or organization had been dissolved, and whether the organization provided any major public service other than drainage.

Section II was designed to record the drainage activities during the decade, 1950–1959. A series of "No-Yes" questions described the various types of drainage activity and provided for skipping of the remainder of the section if there was no drainage activity. Data were requested for the cost of all drainage works and services, for the physical quantity of each major type of new works constructed, and for the cost of all new works. A descriptive entry was required for types of new works not listed. An inquiry on location of the outlet of the new drainage works helped to identify and locate the lands of the project.

Section III contained inquiries related to the area in the project, starting with the area in 1950. For projects included in the 1950 Census, the 1950 area was posted prior to the enumeration. This was followed by an inquiry on the area added since January 1, 1950, and on the area in 1960. This section also included inquiries to determine if any extensive portion of the land in the project area received no drainage benefits or was not being used for agriculture.

Section IV obtained information regarding areas overlapped by other projects. A distinction was made between land provided separate or supplemental service and land taken over by or from another project.

In Section V, provision was made for listing the name of the person, or persons, who supplied the information and the certification of the filled questionnaire by the enumerator and his supervisor.

Shaded squares on the questionnaire gave notice to the enumerator that additional information was required in respect to the project. Shaded squares opposite the area data indicated that

the location and approximate boundaries of these areas must be entered and identified on a map. When this additional work of enumeration was completed, an "X" was to be entered in the shaded square. A shaded square below the inquiry calling for a listing of the other counties involved in an intercounty project served as a reminder that the portion of each of these other counties must be enumerated also.

The questionnaire carried worksheets on the reverse side to facilitate the summarization of drainage activities for the 10-year period and for obtaining a breakdown by counties of data for intercounty projects. A township outline map, also on the back of the questionnaire, provided a place for sketching the location and approximate boundaries of the area served.

Preparation of a drainage map.—In addition to a filled questionnaire, the enumeration of a drainage project required the locating of each project on a map and the outlining of the approximate boundaries of the area served. For projects included in the 1950 Census, the enumerator was furnished a county map on which the location and approximate boundaries of these projects had been entered in the 1950 Census. Thus, the 1960 enumerator generally needed only to map projects not included in the 1950 Census and show changes in areas represented by projects already mapped. Of course, if he found the 1950 mapping to be in error he was expected to correct it. If desired, a separate map or tracing could be submitted, or a sketch drawn on the back of the questionnaire.

Mail canvass.—The listing of drainage projects by the Soil Conservation Service indicated that for 8 of the 48 contiguous States for which no drainage projects were found in the preceding drainage censuses, no drainage undertakings benefiting 500 or more acres of agricultural land had been undertaken during the 10-year period since 1950. Consequently, no further canvass was needed in these 8 States. These States were the New England States, Pennsylvania, and West Virginia.

In Alabama, Georgia, New Jersey, and New York, there were so few projects that a field canvass was not justified, from the standpoint of economy. A similar situation prevailed for Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming where the need for much of the drainage had developed because of irrigation and the projects would not qualify for inclusion in the 1960 Census. The enumeration in these 12 States was conducted wholly by mail.

In the remaining States, a mail canvass was used for most of the counties for which there were less than 5 known drainage projects to be enumerated. Exceptions were made mostly for (1) "county-drain" States where several drains under the same management might be included in one report, (2) those instances where an enumerator would need to go into the county to complete the enumeration of intercounty projects, and (3) counties that involved a minimum of additional time and travel on the part of an enumerator assigned to an adjacent county. In several instances, enumerators were used to complete the enumeration initiated by mail canvass.

Of 1,336 counties requiring reports, 271 were completed by mail canvass and 1,065 by field enumeration. Of the 1,065 counties completed by field enumeration, the initial canvass in 34 counties was by mail, and in 61 other counties a part of the enumeration was by mail canvass. The 979 projects included in the mail canvass required 2,064 mailings, with the enumeration completed for 870 projects and with 109 projects assigned to enumerators for completion.

A facsimile of the letter used to accompany the mailed questionnaire is included in the appendix.

A mail followup was used to complete the enumeration in instances where the enumerator failed to obtain all the necessary information and the lacking information could not be estimated satisfactorily.

The local offices of the Soil Conservation Service provided assistance in numerous instances where there was difficulty in obtaining a satisfactory address or where the necessary information was incomplete. Projects for which assistance was asked were those for which the Soil Conservation Service had provided technical assistance, or legal organizations for which the information could be obtained readily from public records. Many of the legally organized projects, for which information was needed, had been inactive for years, or dissolved with no present management or organization. Dependence was placed, to a large extent, on the Soil Conservation Service for information for inactive or dissolved drainage projects for which no person who was ever associated with the organization could be found.

Field enumeration.—Enumerators for the Census of Drainage were selected from crew leaders and, in a few instances, from enumerators employed in the general 1950 Census of Agriculture. For the 1960 Census of Drainage, 156 enumerators and 21 supervisors were employed. The enumerator assignments averaged about 4½ weeks in duration.

The enumerators and supervisors were trained simultaneously at 10 training locations, selected to provide a minimum of combined travel. The training consisted of two days of technical instruction covering all phases of the enumeration with emphasis on problem situations that could be expected.

The unit of assignment was a county, with each enumerator generally assigned several counties. A drainage enumerator was paid \$1.95 for each authorized hour worked. He was allowed 7 cents per mile for the use of his automobile on official travel, and \$12.00 per diem for living expenses when overnight stops away from home were required.

There was no routine procedure for finding the information needed for the enumeration. The enumeration might require interviews with various individuals and public officials directly connected with specific drainage organizations, or who, because of their public office, might have knowledge of drainage undertakings in the area or records pertaining to such undertakings, or of the present condition and use of lands represented by projects mapped in the 1950 Census. The enumeration of a particular project often required interviews with several individuals and the examination of various public records and maps. Records pertaining to legally organized drainage projects were generally found among the county court records. Sometimes, records were in the hands of town or township officials, or with officials of the drainage organization. At times they were fragmentary. In a few cases records were nonexistent. The records were seldom in such form that the desired information could be taken off directly. When recorded information for an item was not available, the enumerator was instructed to obtain an estimate from a reliable respondent.

Of the 8,485 drainage projects for which data were tabulated in the 1960 Census, 2,348 were inactive throughout the 10-year period 1950-59. For many of these projects, the enumerator could find no person connected with the organization to furnish information regarding the project. In some instances, projects had been inactive over such a long period of time that few individuals could be found who knew that the project had ever existed. In other cases, the enumeration could be accomplished only through inquiry of local officials or affected landowners as to whether the area shown for the project in the 1950 enumeration included any extensive areas which were no longer receiving drainage benefits or were not being used for agriculture.

Completed counties.—As the enumeration of each county was completed, the enumerator turned over to his supervisor all enumerative materials for the county. The supervisor was required to review these materials, following an outline of checks provided for this purpose. After reviewing the materials for each county, the supervisor forwarded them to Washington for processing.

OFFICE PROCESSING

Editing.—Upon receipt in Washington, the drainage questionnaires and maps were examined for completeness and consistency in preparation for tabulation of the data and the reproduction of the maps. A check was made to see that all material for each county had been received including a filled questionnaire for each project. The list of projects that had been furnished prior to enumeration was reviewed for coverage. Omitted items of information were supplied, when available from records in the Bureau, or the figures could be estimated with reasonable accuracy. Inconsistencies between the areas stated in the reports and those mapped were reconciled, insofar as possible, on the basis of the information available. When the available information was insufficient to supply missing data, or to reconcile discrepancies, the needed additional information was obtained through correspondence.

For each intercounty project, the reports were checked to ascertain that complete and separate information was shown for each county part without duplication.

Questionnaires representing undertakings or organizations not qualifying for inclusion in the 1960 Census, as well as those representing duplications, were "rejected." In preparing the advance listing of drainage projects, the names of those for which there was insufficient information to determine whether they would meet the 1960 criteria were purposefully included. The enumerator did not make the decision whether a questionnaire should be filled for such projects. On the contrary, he was required to fill a questionnaire, thus providing documentary evidence as to why the project did not qualify. (For 1960 criteria, see "Definitions and Explanations.") Of 11,483 questionnaires returned in the enumeration, 2,072 were later rejected as not qualifying or because of duplication, and 113 were for projects which had been superseded by other projects during the 10-year period, 1950-1959.

All separate materials, including correspondence, sketch maps, etc.; the worksheets on the reverse of the questionnaire; and notations entered under "Remarks" or elsewhere on the enumerative materials, were examined for information that might be of assistance in the editing.

To check the mapping, the plat for each drainage project was identified on the county map. If a separate map, sketch, or tracing of a project was furnished, it was checked against the county map. If not already plotted, the project was entered on the county map; if in error, the plotting on the county map was corrected. The location, as shown on the map, was checked against any information as to location given on the questionnaire or other materials such as the name of the project, the location of the outlet, overlapping projects, land descriptions, and the like. The extent of the mapped area for each project was checked visually to see that it was reasonably consistent with the area reported on the questionnaire. Areas omitted from the questionnaire were obtained by planimeter measurement of the mapped areas. If the mapped and reported areas differed substantially, available information in the Bureau, including materials for the project from earlier censuses, were generally sufficient for making the necessary correction.

If extensive nondrained or nonagricultural areas were indicated on the questionnaire, but were not identified on the map, such areas could generally be identified by use of materials available in the Bureau such as aerial photographs and detailed maps showing current cultural and physical information. Likewise, if it was evident that an enumerator had omitted to indicate any extensive nonagricultural areas located within drainage projects, such as cities, airports, recreation areas, parks, military installations, wildlife refuges, State or National Forests, or commercial

woodlands, the nonagricultural portions were determined on the basis of these materials.

In checking the county map to the questionnaires, careful consideration was given to the delineation of overlapped areas. Often the extent of supersedence of a project by another, or the quantitative determination of areas served by two or more projects, could be determined only by careful plotting of the overlapping projects. In counties with extensive overlapping, the determination of the net area of land benefited by all projects generally, of necessity, had to be based almost entirely on the mapped areas. In fact, for most counties in the "county-drain" States, the net area serviced by county drains could be obtained only by plotting the separate drains, then measuring the overall mapped area. This had been the procedure for the "county-drain" States in 1950; therefore, only additions and deletions had to be considered in 1960.

After reconciling the questionnaires and the mapped areas, a determination of the area served in 1960, excluding any extensive areas not receiving drainage benefits from works of the project or not used for agriculture, was made for each project. The area served by a project included lands served jointly by it and other projects. Any portion of the project which had been taken over by some other project, however, was excluded. The 1960 area in individual drainage projects was used to tabulate the area of drainage projects by size of project, by type of organization, and by year of organization. That portion, if any, of the 1960 area which was provided separate or supplemental drainage service by one or more other drainage projects was also determined.

To obtain net acreage figures for land in drainage projects, counting only once the land in each project, a worksheet was prepared for each county. (A facsimile of this worksheet is included in the appendix.) Since the 1960 enumeration utilized 1950 Census information as a starting point for both the filling of a questionnaire and for performing the required map work, the worksheet also started with the 1950 information. The worksheet provided for posting (1) changes from the data reported in 1950, (2) areas of extensive nonbenefitted or nonagricultural lands within drainage projects, and (3) areas served by two or more projects. For each of these categories, each tract of land was to be entered only once. In recording changes in areas since 1950, a distinction was made between lands for which drainage was established before 1950 and areas added in the 1950-1959 period.

To insure reasonable accuracy in the areas mapped, the net totals obtained from the worksheet were checked to planimeter measurements of the mapped areas in the county. A similar check against planimeter measurements had been made in 1950. If there were no substantial changes since 1950, no remeasurement was made for 1960.

Tabulation of data.—The county worksheets prepared in conjunction with the editing were used as a source for posting the total area in drainage projects, counting only once land served by two or more projects. This net area represented the land classified (1) on the basis of agricultural use, (2) by year when drainage was established, and (3) by number of projects providing drainage service. All other data were tabulated by adding the items as determined for each individual project.

Preparation of maps.—After reconciling the maps and questionnaires, a tracing was made of each county map outlining the overall areas in drainage projects, exclusive of any designated nondrained or nonagricultural portions and projects not qualifying under the 1960 criteria. These tracings of individual counties were then used for the preparation of the individual State and the United States drainage maps.

DEFINITIONS AND EXPLANATIONS

General.—Although the definitions and explanations which follow refer specifically to the 1960 Census of Drainage, many of them also apply to earlier censuses. Items for which the 1960 definitions and explanations are not adequate for earlier years are discussed further under "Comparability of data." Most of the definitions consist of a résumé of the questionnaire wording, supplemented by excerpts from instructions given to enumerators.

Drainage of agricultural lands, from the standpoint of adequacy, can represent varying degrees of improvement. Therefore, the term "drainage" is not subject to a precise definition. It can be defined only in general terms, subject to considerable variation in application by individual respondents and enumerators. In most instances, however, the resulting data have reasonable overall accuracy and usefulness. It should be kept in mind that in individual instances, had the information been obtained from other respondents or by other enumerators, the results could have been somewhat different. This situation helps to explain some of the differences in the results obtained in the different censuses. (See discussion of "Comparability of data.") There are many geographic areas for which the totals shown in 1960 for land with drains established before 1950 differ from the total areas in drainage projects as reported in the 1950 Census by amounts greater than can be explained by changes in definition.

The use in the 1960 enumeration of areas drained and mapped lands as obtained in the 1950 Census, undoubtedly, had some influence on the data tabulated for 1960 and for the mapped areas shown for 1960. A disadvantage of this procedure was the possible acceptance of the 1950 information in instances where more reliable data could have been obtained. The 1960 enumerator, however, was instructed to correct any errors found in the 1950 enumeration. It is likely, therefore, that the undetected errors were fewer than would have resulted in an enumeration that did not make use of information collected previously. On the whole, this practice probably did not influence the 1960 data appreciably.

Drainage.—The term "drainage" as used in this volume refers to agricultural drainage. Drainage is the removal, by artificial means, of excess water to improve the condition of the land for agricultural use. Drainage is accomplished by means of constructed works and may represent deepening, widening, or straightening of a natural channel; the construction of open ditches; the installation of underground tile or conduits; the construction of drainage wells; the installation of pumps for removal of water; or a combination of these methods, including associated works such as dikes or levees, floodgates, bridges and culverts, land leveling, and removal of snags, brush, or other obstructions which impede water flow.

Storm sewers, sanitary drains, highway ditches, and drains for industrial sites were not considered drainage works, for purposes of the census, unless they also accomplished improvement of agricultural lands.

The mere protection of land from flood waters or from surface runoff, with no drainage works provided to remove gravitational soil water from the protected lands, was not considered as drainage. Flood control works may involve (1) channel construction or improvement, (2) the inclusion of floodgates and outlet drains through the constructed levees so as not to impair natural drainage or drainage previously established, or (3) work on levees or ditches associated with drainage. As a consequence, it was sometimes difficult to distinguish between works serving for flood control only and those providing drainage benefits. Thus, some flood control projects of the U.S. Corps of Army Engineers, or portions thereof, were considered as providing drainage services and included in the 1960 Census. Examples include several channel improvements in the Delta and other

alluvial areas in the Mississippi River basin. These, generally, had been listed by the Soil Conservation Service as projects undertaken since 1950 that provided drainage benefits to 500 or more acres of agricultural land. Another example of borderline projects included were those for which construction or enlargement of levees was accomplished by the U.S. Corps of Army Engineers, but for which future maintenance was the responsibility of drainage districts.

Drainage works constructed solely for the removal of irrigation seepage water or for removal of alkali from the irrigated lands were excluded for the purposes of the 1960 Census. Similarly, when a drainage well or ditch served primarily as a source of irrigation water, with drainage no longer a problem, such projects were not to be included. Drainage established because of irrigation, generally, is so tied in with the irrigation works that it should be considered a part of the irrigation works and system rather than drainage. (See "Scope of the 1960 Census of Drainage.") Drainage operations benefiting naturally wetlands were to be included in the 1960 enumeration, even though such lands were also provided with irrigation. As with drainage coupled with flood control, there was evidence of lack of uniformity in determining when drainage of irrigated lands qualified for inclusion. In a few instances, conflicting information was obtained from different respondents for the same project.

Drainage project.—A drainage project is a plan undertaken as a unit to provide new construction, or to provide maintenance and operation of existing drainage works. A drainage project represents an undertaking under one control, supervision, or guidance.

A drainage project may be undertaken by a single landowner. Often, a farmowner cannot accomplish optimum drainage of his land, acting alone. Obtaining an outlet for his ditches may involve crossing some other owner's land. As a consequence, much of the drainage in the United States has been accomplished as community undertakings, participated in by landowners who have common drainage interests. The administrative structure set up to provide unified action for handling the drainage problem is referred to as its organization. All drainage activities under the direct supervision of one organization or management comprise one project. A drainage project may refer to an accomplished plan, i.e., the physical works have been provided and no further work or maintenance is anticipated on the part of the original organization.

For the 1960 Census, all drains constructed and/or operated by one organization were considered as one project even though they were noncontiguous and were constructed at various times. For example, all public drains under the administration of county officials, or under a special board set up to administer public drains in the county, are treated herein as one project. (See discussion of "County-drain" States.) Similarly, drainage sub-districts administered by the officials of the parent district were generally included with the parent district.

When identified, all drains, formerly but no longer under county jurisdiction and with no present organization responsible for their maintenance, were grouped together and included in one separate report. Such drainage "district" may have been discontinued through petition of the landowners or other legal action, or may no longer be considered as under county jurisdiction because of years of inactivity. The instructions to enumerators did not ask specifically for the identification of county drains that had been withdrawn from the county system. The enumeration instructions specified that for most counties in "county-drain" States, the net area had been satisfactorily determined and mapped in 1950 and, therefore, it would be necessary only to determine the area brought in by new drainage works since 1950. Thus, occasionally a 1960 report for county drains may have included some drains not identified as not being under county management in 1960.

For Delaware, which had been enumerated as a "county-drain" State in 1950, even though the predominant form of drainage organization was the drainage district (see discussion of "County-drain" and "Drainage-district" States), a similar procedure was followed even though each of the inactive drains, arbitrarily combined in the one report in 1960, had originally had its own separate organization. The extensive overlapping and super-sequence, which had occurred through years of drainage activity in the State and which had led to the use of a county questionnaire in 1950, was responsible for similar treatment of all inactive drains in 1960.

Only projects providing drainage benefits to 500 or more acres of agricultural land as of January 1, 1960, were included in the 1960 Census. (See definition of "Drainage.") Enumerators were instructed to consider as agricultural land all woodland and wasteland within farms. They were instructed *not* to consider as agricultural land any areas, used solely for the production of wood or timber, which were not a part of a farm.

A project need not provide complete drainage for the area served. Many projects, especially public drains, provided only the principal channel or outlet drain. The construction of the laterals and field drains, which were required to provide complete drainage of the land, may have been left to the individual farm owners. These supplemental drains, though providing drainage to the same area and necessary for the complete drainage system, were not included with the project for which they furnished supplemental works, but each was considered a separate project, and was separately enumerated if benefiting 500 or more acres.

For projects for which works had been taken over by another project (see "Superseded projects."), any portion not taken over was considered a separate project. If the entire project had been taken over, or if the portion not taken over was less than 500 acres, the project was excluded from the census.

The term "project," for describing the unit for enumeration in the 1960 Census, was usually used in preference to "enterprise" or "organization." "Project" more nearly indicates the physical works represented. "Enterprise" or "organization" refers more to the management and implies reference to all activities of the management which may include functions other than drainage. Furthermore, "organization" implies current active management of a group undertaking. The 1960 Census also included projects for which there was no longer an organization in addition to projects having a definite organization, and projects established by individual owners and cooperative groups without formal organization.

Intercounty projects.—For drainage projects extending into two or more counties, a separate report was obtained for the portion in each county. In presenting data by counties the portion in each county was treated as a separate project, but in presenting data by States the entire project was considered as a unit. Thus, the count of projects shown by counties in County Table 1 will not add to the count shown for the State. Differences in the "county count" and in the "State count" are shown in Summary Table 6. In the 1960 Census, 727 intercounty projects were reported with 1,564 county portions. Of these intercounty projects, 643 included land in two counties; 77, in three counties; 3, in four counties; 2, in five counties; 1, in seven counties; and 1, in eighteen counties.

For intercounty projects, the determination of whether the project qualified, from the standpoint of acreage, for inclusion in the 1960 Census was based on the entire project. For that reason, some county parts, treated as separate projects in the presentation of data by counties, represented fewer than 500 acres of drained agricultural lands.

If separate records of the drainage activities for each county part were not available for an intercounty project, the enumerator

was instructed to allocate on an area basis, or other equitable basis, the portion applicable to each county.

For intercounty drains represented in county-drain systems, the enumeration instructions required that the portion in each county be included in one report covering all county drains in the county. This procedure was to be followed irrespective of whether each county part was administered separately, or whether the entire project was administered wholly by one of the counties or jointly by the counties affected. (See "Drainage projects by size.")

Superseded project.—Many drainage organizations were established for a specific purpose such as to construct new drainage facilities, or to renovate or enlarge facilities established by an earlier organization. Upon accomplishment of its immediate objective, the organization often became inactive or was dissolved. When further work was needed, a new organization was established. The new project may have included the same land, more acreage, or less acreage. Over the years there has been extensive overlapping of drainage projects, only a portion of which may now have an active organization. (See "History of the Census of Drainage.")

Projects wholly superseded prior to 1950 were generally excluded from the 1960 enumeration. Those wholly superseded between 1950 and 1960 were always excluded from the 1960 count of drainage projects. If, however, a superseded project reported drainage operations during the decade, 1950–1959, such operations were included in the data presented for drainage operations, 1950–1959. (See Summary Table 6.) Occasionally, this resulted in a greater number of projects reporting operations during 1950–1959 than the total number of projects in 1960.

Control of a project may pass from one organization to another through court action. More often, change in control has occurred when an organization originally responsible for the construction and the maintenance merely ceased to actively operate the drainage works or to provide maintenance, and these functions were assumed by a new organization or management; or the old works were replaced or incorporated in the works of a new organization.

Whenever the area of a project with no active organization was overlapped by one with active organization, or by one more recently organized if neither project had active organization, the editing procedure required that the overlapped area be considered as having been taken over by the active or more recent organization. Projects of less than 500 acres and, therefore, not included in the Census, were never considered as having taken over works of another project.

Area in drainage projects.—The area in a drainage project is usually the area benefited by the drainage works. For a project undertaken by landowners, either individually or cooperatively, it is the area improved or benefited for agriculture as a result of the drainage facilities provided. For a legally organized drainage project, the area in the drainage project is the area established by the decree setting up the drainage district or project. If public drains are administered on a countywide basis, or on the basis of established political boundaries, it is the area directly benefited by the drainage works. In special districts organized primarily for purposes other than drainage, it is the entire area in the district even though only part may be benefited by the drainage works.

The area served by two or more projects was included in each project. The area taken over by one project from another was included in only one, usually the later project. (See discussion of "Superseded projects.")

Since the area of a legally organized project is that established by the court or other authority, it has definable boundaries. If special taxes were collected for the drainage, the area taxed can be considered as the area in the project. The 1930 Census made a distinction between total area and area assessed but the difference amounted to less than one-third of one percent. Changes in

area of a legally organized project may occur because of addition or deletion of land through action of the court or other authority responsible for the organization. Within the boundaries of a project there may be tracts that receive no drainage benefits or land not assessed. Such excluded areas may or may not have been shown in the mapping. This may account for some of the differences between reported and plotted areas.

Generally, the area in a public or legally organized drainage project represents the area benefited. In some instances, however, land liable as security for bonds or other obligations of a drainage organization may include some high or ridge lands with adequate natural drainage, or some wetlands not reclaimable. Also, the project area may include some benefited land not utilized for agriculture. The 1960 enumeration provided for the determination of any contiguous areas, totaling 500 or more acres, not used for agriculture or not benefited by the drainage works. (See "Area not used for agriculture or not drained.")

For organizations providing a major public service other than drainage, the area may include the entire district although the drainage service provided may benefit only a portion of it.

For projects owned by one landowner and projects representing drainage undertakings of two or more landowners cooperating without organization under statute law, the determination of the area was less precise and represented the judgment of the respondent as to the area improved or benefited. The area was often estimated by the Soil Conservation Service in the case of projects for which they provided technical assistance.

The presentation of the 1960 data includes several items relating to area in drainage projects for which a special explanation is considered necessary.

1. *Total area in drainage projects*, as presented in line 5 of County Table 1, line 4 of State Table 1, and Summary Tables 1 and 5, and *Land in drainage projects* as presented in column 1 of Summary Table 7 represents the total area of land, within the specified geographic unit, that was in drainage projects included in the 1960 Census. Land in two or more drainage projects was counted only once. This item includes some land not used for agriculture and some land not drained. (See "Area not used for agriculture or not drained.")

2. *Net area drained and used for agriculture*, as presented in line 8 of County Table 1, line 6 of State Table 1, and Summary Tables 1 and 5, and *Land in drainage projects* as presented in column 1 of Summary Tables 8 and 13, excluded extensive contiguous areas of land not used for agriculture and land not drained. (See "Area not used for agriculture or not drained.") Land in two or more projects is counted only once.

3. *Totals of areas of individual projects*, as presented in line 10 of Summary Tables 1 and 5, column 15 of Summary Table 8, and the area data for drainage projects classified by size of project, by type of organization, and by year started or organized (County Table 1, State Tables 1 through 4, and Summary Tables 1 through 5, and 11, 12, and 13) represent the sum of the areas in individual projects with no deduction for land included in two or more projects. Extensive contiguous areas of land not used for agriculture and land not drained were excluded from this item. (See "Area not used for agriculture or not drained.") The difference between this item and the preceding item is due to land served by two or more projects. (See "Area served by two or more projects.")

Area not used for agriculture or not drained.—The area in drainage projects frequently included land that was not being used for agriculture or land that was not receiving drainage benefits from works installed or operated by the project. (See definition of "Area in drainage projects.") Two questions (16 and 17) on the 1960 Drainage Questionnaire identified contiguous tracts of 500 or more acres of such land within the area reported for the project. The area not benefited might represent land for which the drainage works had completely deteriorated or land for which no drains had been provided. For a project which provided both drainage and flood protection, the questionnaires identified, for exclusion, any land protected from overflow with no drains provided. Land with drainage required solely because of irrigation was, likewise, identified and excluded.

Land within drainage project boundaries not used for agriculture might be wasteland, cutover land, residential or industrial areas, airports, military installations, public parks, wildlife refuges, State or National Forests, commercial woodland, or other lands in nonagricultural use.

Inquiries which served to identify areas of nonagricultural or nonbenefited lands within drainage projects could not be utilized advantageously to locate all such lands. For that reason, the effort was restricted to the determination of contiguous areas of 500 or more acres. In the application of this requirement, small scattered tracts of benefited agricultural lands, in extensive areas predominantly nondrained or nonbenefited, were sometimes disregarded in the enumeration or in the office processing. Enumerators, also, occasionally failed to report areas, such as towns, airports, public parks, wastelands, etc., which obviously were nonagricultural or nonbenefited. This omission may have been due to misunderstanding as to the nature of the information available for the project from the 1950 Census. Information for lands not used for agriculture or not benefited was not obtained in 1950. The 1960 instructions had stressed the need for obtaining changes in operations since 1950. With no change in the situation, the enumerator may not have been aware of the need for this information. Whenever an omission was indicated, the nonagricultural or nonbenefited areas were determined through correspondence or from examination of maps and aerial photographs available in the Bureau.

The item identified in the tables as "Net area drained and used for agriculture" was obtained by subtracting, from the total area in drainage projects, only the included tracts of 500 or more contiguous acres reported as not used for agriculture or not drained. Thus, the area shown as drained and used for agriculture may include many acres of interspersed nonagricultural or nondrained lands in tracts of less than 500 contiguous acres. This explains why the "Net area drained and used for agriculture" reported for a county sometimes exceeds the total land area in farms.

In the tables showing the total areas of individual projects classified by size, type of organization, and year started or organized, any contiguous tracts of 500 or more acres identified as being nonagricultural or nondrained were excluded. If the total area served by an individual project, exclusive of such nonagricultural or nonbenefited lands, was less than 500 acres the project was "rejected" and excluded from the 1960 totals. For intercounty projects the determination was based on the entire area, and not on the portion in each county.

The exclusion of nonbenefited portions, in the presentation of area data for projects classified by size, by type of organization, and by year started or organized, resulted in the data for one Florida county showing one project with no acres. A major project reported for Florida extended into 18 counties several of which were reported as receiving no drainage benefits as of January 1, 1960, from works constructed or operated by the project. Much of the work done prior to the census date represented planning and engineering. Completed construction and costs for operation of drainage works were limited, as of January 1, 1960, to 9 of the 18 counties.

Land by year drainage was established.—The area drained and used for agriculture was classified, on the basis of when the drainage was established, into two groups, as follows: (1) *Drainage established before 1950* and (2) *area added 1950-1959*. If a project took over the works of another, or provided supplemental service to an area included in an earlier project, the land was usually classified on the basis of the drainage established by the earlier project. Thus, land reported as in drainage projects in the 1950 Census was, with few exceptions, classed as provided with drainage prior to 1950. Generally, for drainage projects reported as organized or started prior to 1950, all the land reported as in the project on January 1, 1950 (question 13 on the questionnaire) was classed as having drainage established before

1950. Land reported as added since January 1, 1950 (question 14 on the questionnaire) was considered as land with drainage established since 1950, provided new works were reported and the added area did not represent an overlapping of area included in the 1950 area of some other project. Additions to a project, which had been made because the lands were already receiving drainage benefits, were not considered as "area added 1950-1959."

For a project started in 1950 or later, the entire area, except for any portion overlapping an older project, was classed as having drainage established in the 1950-1959 period. Usually, the determination of drainage established for new areas was supported by reports of newly constructed drainage works. In a few instances, the drainage works reported for the newly drained lands consisted entirely of cleanout or restoration of old works. If the land had not been included in the 1950 Census, or in another project reported in 1960, the area was classed as having had its drainage established in the 1950-1959 period, on the assumption that the old works requiring renovation had ceased to provide the area with drainage benefits.

The assessed or taxed area of a project sometimes included land for which the drainage had not been established. In the case of an organization providing a public service, other than drainage, only a portion of the area of the project may have been receiving drainage benefits. For this reason, there were some instances where the 1950 area of a project included land for which drainage was actually first established since 1950.

Land classified on the basis of when drainage was established should not be confused with land reported for drainage projects classified on the basis of when the project or organization was started. (See Summary Table 13 and discussion of "Drainage projects by year started or organized.")

Area served by two or more projects.—The area served by two or more projects was obtained (1) through the questionnaire inquiries on overlapped area (Section IV of the questionnaire) and (2) by checking the mapped boundaries of each project. Careful determination of the overlapped areas was essential to the determination of the net land benefited by drainage projects and, for that reason, received special consideration in the editing process. A distinction was made between areas taken over and areas provided separate or supplemental service.

Usually, separate or supplemental service was the result of one project providing the outlet drainage facilities and another the laterals or branch drains. Or, each may have provided certain specified drainage works or services. Sometimes three or more projects provided service to the same area. As a general rule, the editing instructions considered that overlapped areas, as determined from the mapping of the lands in each project, represented dual service except when it was determined that one project had taken over the lands of another.

In making the determination of the area served by two or more projects, consideration was given to possible errors in mapping. If the plotted areas of two projects indicated overlapping, but the net area mapped for the two projects was equal to the sum of the areas reported for each without any deduction for overlap, the projects were considered as not having any area in common. A similar determination was made for adjoining projects when one did not provide an outlet for the other. The apparent overlap may have been indicated solely because the source materials for mapping did not reflect all revisions in the boundaries of each of the two projects.

In presenting the portion of the net land area in drainage projects represented by tracts served by two or more projects (line 11 of County Table 1, line 9 of State Table 1, and Summary Tables 1 and 5, and columns 7-10 of Summary Table 8), each tract served by two or more projects was counted only once. In presenting the portion of the totals of areas of individual projects provided with service by one or more other projects (column 3

of State Tables 2, 3, and 4; also column 3 of Summary Tables 2, 3, and 4) each tract receiving service from two or more projects was included for each of the projects. The differences in the totals shown for these two items were the result of the multiple counting, in the latter, of land served by two or more projects. Lands served by two projects were included in each of the two projects; lands served by three projects, in each of the three; etc. The total net area drained and used for agriculture, likewise, does not contain any duplication of land served by two or more projects but the totals of the areas of individual projects include multiple counting of the land included in more than one project.

Approximate land area.—The approximate land area comprises land in farms, cities, forests, swamps, deserts, etc., and the area occupied by streams, sloughs, estuaries, and canals less than one-eighth of a mile in width, and lakes, reservoirs, and ponds of less than 40 acres. Changes since 1940 reflect political changes in boundaries or actual changes in land area caused by changes in number and size of reservoirs, lakes, etc. The figures for 1940 represent a complete redetermination of the area and may differ from those shown for earlier years.

Land in farms.—The acreage designated under "Land in farms" was obtained in the census of agriculture. The "land in farms" figures, shown in the tables presenting data for the 1960 Census of Drainage, are from the 1959 Census of Agriculture taken in the fall of that year. "Land in farms" consists primarily of lands used for agriculture, but also includes considerable areas not actually under cultivation nor used for pasture or grazing. All woodlands and wastelands owned or rented by farm operators were included unless being held for nonagricultural purposes or unless the acreage was unusually large.

Drainage operations, 1950-1959.—For each project included in the 1960 Census, information was obtained for drainage activities for the 10-year period, 1950 to 1959, inclusive. The 10-year period could be on either a calendar- or fiscal-year basis. In either case a report was intended to include a full 10-year period. For convenience, a worksheet was provided for entering data for each of the 10 years.

Reports on drainage works and services during this 10-year period were required for all projects which, at any time during the period, provided drainage benefits to 500 or more acres which were being used for agriculture in 1960. The data for drainage works and services, therefore, include totals for some projects which had been taken over by another project prior to 1960.

When a project provided a major public service in addition to drainage, the enumerator was instructed to include with the drainage works ditches, pumps, or other works, or portions thereof, that accomplished drainage of agricultural lands even though these served primarily as storm sewers, sanitary drains, highway ditches, or for the drainage of residential or industrial sites, or for irrigation, or for some other special purpose. If no separate records were kept, costs and works were to be allocated to provide an equitable share to agricultural drainage. If the allocation was not made in the field enumeration, the allocation was made during office processing, unless the amounts involved were exceptionally large. In the latter case, the information was obtained through correspondence.

Cost of all drainage works and services.—The inquiry called for the total cost of all drainage works and services provided for the 10-year period, 1950-1959. The total was to include costs for all drainage activities of the organization, including construction or installation of new drainage works, enlargement or complete replacement of prior works, cleanout or restoration of old works, maintenance, operation, or repair of drainage works, and administration. The questionnaire required the inclusion of all costs relating to the works and services provided, regardless of when paid or to be paid. Specific mention was made of costs of organization, engineering, rights-of-way, legal services, and administration. Payments on principal or interest on bonds or notes were

not to be included. The enumeration instructions asked for the inclusion of all costs for physical works, materials, equipment, etc., regardless of the source of the funds used. Costs paid by a county, a State, or the United States Government, or by another drainage organization for use of facilities provided by the reporting organization were to be included.

New drainage works constructed, enlarged, or installed.—New drainage works referred to the digging or placement of drains where none existed before; the straightening, enlarging, widening, deepening, or relocation of natural channels or of prior ditches; or the installation or replacement of drainage pumps. The original construction of levees or dikes for the protection of lands provided with drainage, or their extension or enlargement, was, likewise, considered as new drainage construction. Maintenance, cleanout, or restoration of prior works, with no enlargement or change in the original works, were not considered new drainage construction.

The enumerators experienced some difficulty in determining when work on old drains was to be considered as new works.

For each of the three principal types of drainage works—*open ditches, tile or covered drains, and levees or dikes*—information was obtained as to the length of new construction; and for *pumps*, the number of newly installed pumps. New works represented by other structures such as drainage wells, sumps, flood or tide gates, bridges, culverts, wellhouses, and land leveling were to be reported under "other." No information was obtained for these "other" new drainage works except their type. The data presented include only a count of the projects reporting "other" new works.

Costs of new works.—This part of the overall cost for drainage was obtained in a separate question by asking how much of the total cost of works and services represented the cost of new drainage works reported.

Cost of maintenance, operation, repair, and administration.—This was obtained by subtracting the costs of new works from the total costs reported for all drainage works and services.

Drainage projects by size.—Drainage projects were classified on the basis of the total acres of agricultural land receiving drainage benefits from works of the project. In the classification by size of project, the portion in two or more projects was included in each project. For intercounty projects, the determination of size was based on the total acres in the project, not on each county portion.

For a project comprising all drains under the jurisdiction of a given county, the area represented the combined total of the individual areas of drained land in the county that were administered by county officials, including portions of intercounty drains administered by other counties. Although projects with fewer than 500 total acres were excluded from the 1960 Census, the crediting of each portion of a county drain to the county in which located resulted in reports for county drains for two counties in 1960 showing less than 500 acres of drained agricultural lands. These two counties were Benton, Iowa, and Jerauld, South Dakota. In 1950, there were three such "county-drain" reports, the two counties mentioned above and Fulton, Kentucky.

For Delaware, all drainage projects for which there was no active organization at the time of the census were grouped into a single report for each county. This arbitrary procedure affected the data presented by size of project.

Drainage projects by type of organization.—Drainage projects were classed by type of organization into three groups:

1. Drains owned by one landowner.—A landowner may be an individual, a partnership, an estate, a private corporation, or an institution.
2. Cooperative or mutual drains represent undertakings by two or more landowners cooperating without special organization under State drainage laws for the construction or operation of drainage works benefiting their lands. Many of the

cooperative or group drainage projects were undertaken under the guidance of the Soil Conservation Service.

3. Legally organized public drains represent community or public drainage undertakings accomplished through some form of governmental organization. These could be an organization administered by public officials of a county, a township, a State, an agency of the Federal government, or by specially elected or appointed officials or boards. A large variety of general or special State laws provide for equitable cooperation among landowners who will be benefited by a drainage undertaking. (A synopsis of drainage laws in the various States was included in the 1940 Census of Drainage report.)

Although legally organized drainage projects represent a large variety of types, most fall into two major groups. (1) County drains are governed by county officials or by a special official or board elected or appointed to administer public drainage undertakings in the county. In the 1960 Census all county drains in a county were treated as though they represented one project. (See "Drainage project," "Intercounty projects," and "County-drain" States.) (2) Drainage districts are governed by a special official or board elected or appointed for that particular project. (See "Drainage-district" States.)

Drainage projects by year started or organized.—The classification of projects by the year in which they were started or organized provides an indication of relative drainage activity in different periods of time. The drainage activity may not necessarily have represented construction of new works or the establishment of drainage on lands not previously benefited. Frequently the purpose of a new drainage project or organization was the restoration or improvement of existing drainage facilities, their extension, or the construction of supplemental works.

The classification of a project by year the project was started or organized should not be confused with the classification of the land by the year in which drainage was established. (See "Land by year drainage was established.") A project started or organized prior to 1950 may include some lands for which drainage was first established since 1950 while a project started or organized since 1950 may include lands on which drainage had been established by a prior project. State Table 4 and Summary Table 4 provide data on land by the year drainage was established for projects started or organized before 1950, and those started or organized in the period 1950-1959, respectively.

COMPARABILITY OF DATA

Continuity maintained despite changes.—The scope and content of the Census of Drainage has varied considerably since the first Census of Drainage in 1920. Notwithstanding the variation, a reasonable degree of continuity has been maintained in the data collected and tabulated. In 1920, 1930, and 1940, emphasis was placed on the status of drainage facilities as of the census date while in 1950 and 1960, emphasis was placed on the drainage activities for the most recent 10-year period.

Changes in enumerative procedures.—The Census of Drainage has always been primarily a census of community or public drainage undertakings and of the larger private drainage undertakings. Variations in the methods employed and the scope of the census have had the most effect on the number of projects covered but have not greatly affected the comparability of other items. The major changes have been (1) the elimination, in the enumeration, of numerous projects which had been taken over by a later project; (2) the exclusion of projects of under 500 acres which, because of their small size and tendency to represent overlapped projects, had contributed very little to the overall drainage area; (3) the consolidation into a single report of undertakings under common management; (4) the elimination of drainage undertakings representing an integral part of irrigation with the drainage required solely because of the irrigation of the land; and (5) the identification of extensive contiguous areas, within drainage projects, that were not used for agriculture or not drained. It will be noted that the changes listed under (1) and (3) had no effect on

the net area or drainage facilities covered in the census; the change under (2) reduced greatly the number of reports without any substantial reduction in the area or drainage facilities covered; the effect of the change stated under (4) was restricted to irrigated areas for which there was no need for drainage prior to irrigation; and the effect of the change listed under (5) was to provide more accurate data for lands which had been improved for agriculture by drainage.

Elimination of superseded projects.—In the first three censuses an attempt was made to obtain reports for all public drainage organizations, regardless of size, which had contributed to the investment and to the physical works represented in public drainage undertakings in existence at the time of the census. Reports were required for some organizations which had been wholly superseded by later projects. Quite commonly, a drainage organization had been established to provide a particular service and was dissolved or discontinued upon completion of the specified undertaking. When additional work was required, a new organization was created. In some counties the same land had been covered several times. For example, in 1940 in Ohio the total of areas of individual projects was more than 3 times larger than the total land area represented by all drainage projects in the State. (See Summary Table 8.) In the 1940 Census of Drainage Report, a distinction was made between "number of reports" and "number of enterprises," the latter intended to represent projects that had not been superseded by later organizations. For all drainage States reported in that census, the number of reports totaled 79,220, of which nearly half represented projects that had been superseded by later projects. Only 42,363 of these reports, or 53.5 percent, represented projects that had not been superseded.

The change in 1950, requiring the reporting of drainage activities for the most recent 10-year period, in lieu of an inventory of all physical works and the total capital investment represented by these works, made possible the elimination of reports which had contributed to the drainage works and to capital investment, but which no longer provided any drainage services. The effect of this elimination, in respect to number of reports, is shown by a comparison of number of projects, 1940, and number of reports, 1940. (See Summary Table 6.)

Elimination of projects under 500 acres.—A large proportion of the reports obtained in the first three censuses of drainage represented very small public drainage undertakings whose combined contributions to the overall totals were negligible. In 1940, more than half of the reports were under 500 acres but these small reports contributed only 5 percent to the net land area represented by all drainage projects. The decision to exclude public drainage projects of under 500 acres in the 1950 Census enumeration did not appreciably reduce the census coverage of drainage facilities but did eliminate the necessity of obtaining large numbers of reports that would contribute little significance to the statistics collected. Privately owned drainage projects of under 500 acres have been excluded from all five Censuses of Drainage.

A comparison of the total number of reports in 1940 and the number in 1940 excluding those representing fewer than 500 acres, is presented in Summary Table 6. Summary Table 11 provides a comparison of the totals of the acres in individual projects for all reports obtained in 1940 and for those under 500 acres. In making a comparison of the total areas, it should be kept in mind that nearly one-half of the totals of the acres of individual projects of under 500 acres represented land overlapped in other projects.

In 1950, although projects of less than 500 acres were eliminated from the enumeration, the data include 8,286 reports and 604,757 acres representing reports of under 500 acres of drained irrigated land reported in the Census of Irrigation.

One report for all drainage undertakings under same management.—More than four-fifths of all reports obtained in each of the first three censuses of drainage were from three States—Ohio,

Indiana, and Michigan. In each of these States, most of the drains were administered by county officials.

The decision in the 1950 Census to use one questionnaire to cover all drainage activities in each county in these and 7 other States greatly simplified the enumeration. (See "History of the Census of Drainage" and "County-drain" States.) It was no longer necessary to plot the land for every successive drainage activity. If records in the county provided totals for all drainage activities, it was not necessary to search out the data for each individual undertaking.

In these three States the number of reports obtained in the enumeration was reduced from 64,881 in 1940 to 196 in 1950. (See Summary Table 6.) A disadvantage of the procedure followed in 1950 was its failure to provide separate information for projects that were not under county management. These projects had been arbitrarily included in 1950 in the one report obtained for each county.

In 1960, the procedure was modified to obtain separate information for each project having its own separate organization but required, in all States, one report for all drainage undertakings under the same management. (For further discussion of the effects on the statistics of this enumeration procedure see "County-drain" States.)

Elimination of irrigation drainage.—In taking the earlier censuses of drainage, considerable difficulty had been experienced in obtaining satisfactory data for irrigation projects having their own drainage. In 1950, the reporting on the drainage questionnaire was so incomplete that it was decided to use the more limited data secured in the Census of Irrigation for that year. The drainage data available from the irrigation census were limited to the area of irrigated lands provided with artificial drainage and the number of projects reporting drainage. Some downward adjustments were made in these irrigation census data to eliminate drainage activities of separately organized drainage districts. Adjustments were limited to Florida, Louisiana, and Texas. The replies received in the 1960 mail canvass for irrigation enterprises indicated that there had been additional duplication which had not been eliminated. The exact location of the drained land reported in the 1950 Census of Irrigation had not been required. Consequently, no satisfactory check for duplications in the drained areas reported in the 1950 Census of Irrigation and those reported in the Census of Drainage was possible.

The decision, in 1960, to eliminate coverage of drainage required solely because of irrigation resulted in the exclusion, in that year, of most of the 9,076 reports and much of the 4,119,059 acres of drained lands reported in the 1950 Census of Irrigation and included in the 1950 drained land totals. Of these totals from the Irrigation Census, 8,286 reports, with 604,757 acres, were eliminated because of the 500-acre limitation. In addition to drainage performed by irrigation enterprises, the 1950 Census of Drainage included 267 drainage enterprises, organized separately, for which the drainage was principally for the purpose of removal of alkali or seepage from irrigated land. These 267 enterprises accounted for 1,270,729 drained acres in the 1950 total. The 1960 reports for most of these projects again indicated that the drainage was required solely because of irrigation and, therefore, were excluded from the tabulations.

Identification of nonagricultural and nondrained lands.—In the 1950 Census of Drainage Report, the total land in drainage projects for 40 small geographic areas—22 parishes in Louisiana; 4 counties each in Florida and Michigan; 3 counties each in Minnesota, Ohio, and Texas; and 1 in Arkansas—exceeded the total land in farms by 20 percent or more. The excess for these 40 small geographic areas amounted to 10,150,825 acres, or 9.9 percent of the total land in drainage projects reported for all drainage States.

In 1960, the determination of extensive nonagricultural and nondrained tracts within all drainage projects resulted in the identification of 9,573,393 acres, or 9.4 percent of the land in drainage projects, as not being used for agriculture or not benefited by the drainage works provided. The inquiry, which allowed for the determination of such land, permitted the identification and exclusion of former drainage district lands which now represent special use areas, such as State forests, wildlife refuges, recreation areas, etc. Similarly, it aided in identifying lands which had been withdrawn from an existing district for one or more of these special uses. Also excluded from the total area were large areas of swamp or waste lands and other nonbenefited areas in so-called countywide drainage districts. In 1960 the enumeration procedure called for the inclusion of only the portion taxed, if special levies were made against landowners directly benefited, or the portion actually improved if the entire county was taxed. In 1950, the entire area of the county was included.

Differences in reporting overlapped areas.—The consolidation into a single report of two or more undertakings under common management did not allow for the reporting of areas provided with supplemental services.

The land area in drainage projects, counting only once land in two or more projects, was accomplished in 1920 and 1930 by determining for each project the area not represented in an earlier project, whereas, in 1940 and 1950, this was accomplished by determining the area not in a later project. In 1960, the determination was made through the use of a worksheet which provided for counting only once each piece of land represented in the plotting of the projects on the county map.

In Summary Table 8, which presents data on areas served by two or more projects, the 1960 area is that which was provided drainage services by two or more projects. The 1950 totals for overlapped areas were obtained by subtracting from the sum of the acres of individual projects the net land area represented by all projects. The 1940, 1930, and 1920 totals for overlapped areas were, likewise, obtained by difference and were further affected by the inclusion of projects which had been superseded by later projects. (See "Elimination of superseded projects.")

In Summary Tables 12 and 13, land in two or more projects was included in 1960 for each project, thus representing multiple counting of such lands. For 1950 and 1940, only land not taken over by a later project was included. For 1930 and 1920, only land not represented in an earlier project was counted. In Summary Table 13, the area presented by year the project was started or organized represents, for 1950 and 1940, the area by year of beginning of the most recent drainage undertaking, while the 1930 and 1920 data represent more nearly the year drainage was first established for the area.

"County-drain" States.—The grouping of States, similarly affected by changes in procedure, permits a better comparison of historical data. The group of States most affected by changes in procedure were the 10 States designated in the 1950 report as "county-drain" States.

The simplification of the 1950 questionnaire and the use of only one report in 1950 for each county, for these 10 States, resulted in the omission of inquiries on pump drainage, year and type of organization, and overlapping of drainage projects. In presenting drainage data in 1950, for these States, no count was shown for number of projects and no classification was shown for type of project, year of organization, or size of project. In this report, the count shown for 1950 is the number of counties for which a report was included. In the 1960 presentation, each of the 1950 county reports was considered as representing a legally organized drainage project and was classified by size on the basis of the total acres reported for the county. The possible inclusion in the county report of undertakings of individual landowners or of cooperating groups of landowners without formal organization under State laws was disregarded.

In 1960, the determination of the year started or organized for a combined report represented the year the management was established, or the year the first drain was started if the management preceded the drainage activities. The determination of the land for which drainage had been established since 1950, however, provided a measure of new undertakings for organizations established before 1950.

Except for Delaware, the predominant type of drainage organization in the so-called "county-drain" States was the county drain. For most counties in these States, the 1960 procedure provided data very comparable to those in 1950. The change in procedure affected only counties having drainage organizations not classed as county drains. For Delaware, since the predominant type of drainage organization was the drainage district, under the 1960 procedure each district required a separate report. The combined report used in 1950 was retained in 1960, for Delaware, only for districts for which there was no organization in 1960. (See "Drainage projects by size.")

"Drainage-district" States.—This designation was used for all drainage States other than "county-drain" States. For these States, the predominant type was the drainage district and the 1960 and 1950 procedures more nearly paralleled those used in 1940. The most pronounced difference was in the reporting of irrigation drainage.

"Irrigation" States.—This designation is used for that group of "drainage-district" States for which the 1950 data included drained lands reported in the Irrigation Census. The effect on the data, of the exclusion in 1960 of drainage undertakings which had been required solely because of irrigation, was limited to these States and a few counties in the "county-drain" States.

"Other" States refer to those "drainage-district" States not affected by the method of handling irrigation drainage. These States were least affected by changes in procedures.

SUMMARY OF DRAINAGE ACTIVITIES

The total area in drainage projects serving agricultural lands, as determined in the 1960 Censuses, was 101,870,257 acres. This area, benefited by drainage projects of 500 or more acres, is less than the 102,688,331 acres reported in 1950 but actually represents an increase for comparable categories of land. The 1960 data did not include approximately 3 million acres of drained irrigated lands and about 6 million acres of swamp and waste lands counted in 1950 but excluded under the 1960 procedures.

Of the 1960 total area of 101,870,257 acres within drainage project boundaries, 9,573,393 acres represented extensive areas either not being used for agriculture or not benefited by drainage works established by the projects. The remaining 92,296,864 acres, after the exclusion of extensive nonagricultural and non-drained lands, represented the area predominantly agricultural which had been benefited by installed drainage works. However, this total contained an unknown amount of interspersed non-agricultural land. Drainage was reported, as newly established since 1950, on 5,336,593 acres. This newly established drainage area represented both improvement of lands already in agriculture and the reclamation of new lands for agriculture. One-third of these newly drained lands represented additions to drainage projects in existence in 1950 and two-thirds, lands for which drainage works were established by projects started since 1950.

Projects initiated since 1950 also included new works or services for 2,637,792 acres on which drainage had been previously established. A large proportion of these newly established projects were undertakings of groups of farmowners cooperating without legal organization or undertakings of individual farmowners. The acreage of benefited lands of individual landowners and cooperative groups was approximately 2½ times that reported in 1950.

In 1960, projects started prior to 1950 accounted for 93.6 percent of the total agricultural lands reported as provided with drainage.

Three-fifths of these older projects reported drainage activity in the period 1950 to 1959, with one-fifth reporting construction of new drainage works. Approximately one-fifth of those providing new works since 1950 had extended their facilities to lands not previously drained. Two-fifths of the projects started before 1950 reported no maintenance or other drainage services provided since 1950. Maintenance work on public drains by individual landowners would not have been included in the reports for public drains.

The total cost of drainage works and services for the 10-year period amounted to \$416,875,865, of which \$185,688,673 was for new works. New facilities represented, principally, construction of 33,543 miles of open ditches; 2,192 miles of tile or covered drains; 2,017 miles of levees; and the installation of 957 pumps. Costs for maintenance and operation of established drains, exclusive of any maintenance for public drains by individual landowners, amounted to \$2.50 per acre drained, or 25 cents per acre per year.

The greatest portion of the agricultural land in drainage projects is located in the North Central States and lower Mississippi Valley. The States with the largest drained acreage in 1960 were Indiana with 11,053,446 acres, Minnesota with 10,560,808 acres, Michigan with 9,877,049 acres, Ohio with 8,809,415 acres, and Louisiana with 7,110,624 acres. These five States accounted for more than one-half of the total drained agricultural land. These

States were followed in order by Iowa with 6,871,339 acres, Texas with 5,691,130 acres, Illinois with 5,563,426 acres, and Florida with 4,855,327 acres.

Three States accounted for more than one-half of the land on which drainage had been newly established since January 1, 1950. These three States were Minnesota with 1,244,237 acres on which drainage had been newly established, Louisiana with 965,687 acres, and Florida with 548,956 acres. Other leading States were Texas with 318,198 acres, North Carolina with 254,482 acres, Mississippi with 249,368 acres, California with 244,352 acres, and Arkansas with 233,263 acres. These eight States accounted for more than three-fourths of the total land on which drainage had been established since January 1, 1950.

Florida led all States in the amount spent for agricultural drainage for the 10-year period, 1950 to 1959, with a total cost of \$91,627,636 for all drainage works and services. Of this total, \$68,012,516 represented an outlay for new construction. Florida accounted for more than one-fifth of the total reported by all States for drainage works and services and more than one-third of the total cost of new works. Louisiana reported a total expenditure of \$45,796,344, and Minnesota, \$41,800,993, with more than one-half of each total representing new works. Michigan followed with a total cost of \$37,186,074, of which \$32,402,708 was for maintenance, the largest amount of maintenance reported for any State.

SUMMARY

(1)

DRAINAGE OF AGRICULTURAL LANDS

CONTERMINOUS UNITED STATES—LOCATION OF LAND IN DRAINAGE PROJECTS, 1960
(Projects benefiting 500 or more acres of agricultural land)

See inserted folded map

Summary Table 1.—DRAINAGE PROJECTS—NUMBER, AREA, COST, AND WORKS: CENSUSES OF 1920 TO 1960

Item	1960 Census (39 States)	1950 Census (40 States)	1940 Census (38 States)	1930 Census (35 States)	1920 Census (34 States)
AREA					
Approximate land area.....	1,744,413,440	1,819,123,840	1,785,136,000	1,743,699,840	1,717,932,160
Land in farms.....	1,682,713,726	1,123,690,602	1,004,930,884	905,805,427	844,924,236

Pumping units.....	number of units.....	81,146	1,284	1,284	453

NA Not available.

¹For 1950, the number includes irrigation enterprises reporting drained land in the Census of Irrigation; for the 10 "county-drain" States, all drainage projects in each county were enumerated as a unit. In 1940 and earlier, each drain was counted a separate project. For 1930 and 1920, the count represents the number of reports and includes projects wholly superseded by later projects and, for intercounty projects, the separate reports for each county. See Summary Table 6 and text. See Summary Table 11 for explanation of counts by size of project.

²Not fully comparable. See Summary Table 7 and text.

³Total of acres of individual projects with no deduction for land included in more than one project; for 1960, extensive contiguous areas not used for agriculture or not drained (line 5) were excluded. See Summary Table 7 and text.

⁴For 1950, figures exclude 9,076 projects and 4,119,059 acres in "irrigation enterprises"; for the 10 "county-drain" States, all drainage projects in each county (other than "irrigation enterprises" from Census of Irrigation) were included with county drains. See text.

⁵For 1960, sum of areas of individual projects (see footnote 3); for 1920 to 1950, land in two or more projects includes only once; for 1950 and 1940, land in two or more projects was included only for the project last organized; for 1930 and 1920, for the project first organized.

⁶For 1940, figures exclude 4,240,578 acres in "irrigation enterprises" and 36,000 acres not identified by type; for 1930, figures exclude 2,644,476 acres in "irrigation enterprises" and 24,192 acres not identified by type; for 1920, figures exclude 462,599 acres in "irrigation enterprises" and 58,362 acres not identified by type. See Summary Table 12 and text.

⁷In 1940, 1930, and 1920, the classification by type of organization included drainage undertakings by two or more operators cooperating without organization under statute law with "individual ownership enterprises." One cooperative project of 10,000 acres in Georgia was identified in the 1920 report. See Summary Table 12 and text.

⁸For 30 States only, exclusive of 9,044 projects and 4,109,373 acres in "irrigation enterprises"; year began and pumping units not reported for the 10 "county-drain" States. See Summary Tables 10 and 13 and text.

⁹Revised to equal sum of figures shown in 1920 by States; 1920 figures exclude 229,547 acres for which date of organization was not reported. See Summary Table 13.

¹⁰Cost of new works for lands not previously drained.

DRAINAGE OF AGRICULTURAL LANDS

¹Land served by two or more projects counted only once.²Total of areas of individual projects with no deduction for land included in more than one project; extensive contiguous areas not used for agriculture or not drained (line 5) were excluded.³Includes projects taken over by another project prior to 1960. See text.

Wyoming.....	6	6	...	189	194	19

¹Indicates States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. For the "county-drain" States, in 1950, all drainage projects in each county were enumerated as a unit, therefore, the counts shown for that year represent the number of county reports. For 1940, 1930, and 1920, each drain was counted as a separate project. See text.

²Boldface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises" enumerated in the Census of Irrigation. See Footnote 2 and text.

³State count: one project (in Florida) reported operations, 1950-1959, in 10 counties.

⁴State count: the projects excluded represented "irrigation enterprises" enumerated in the 1950 Census of Irrigation which showed land drained. Such reports, from the 1950 Census of Irrigation, were included in the data presented for the 1950 Census of Drainage. See text.

⁵Includes number of drainage projects shown in 1940 Census of Drainage plus reports in the 1940 Census of Irrigation showing land drained. For "county-drain" States, no count of projects was carried in the 1950 report. See text.

⁶Number of reports include projects that had been wholly superseded by other projects and, for interstate projects, the reports for each county. See text.

⁷The number of reports for 1920, as shown in the 1940 Census of Drainage report, differs from the number shown in the 1920 report with no explanation of the differences.

⁸Total number of projects shown in the 1950 report was 14,084 which total represented 5 "drainage-district" States. No count was shown for 10 "county-drain" States. That total was 10 fewer than the "30-State" total shown here due to interstate projects. In this table, an interstate project was counted in each State in which a part was located.

⁹Number shown on page 368 of the 1920 report; the sum of the numbers reported for the separate States equals 56,190.

¹⁰Not shown separately in 1920; combined total for this and 4 other States was shown as 18.

¹Italics indicate States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. For the "county-drain" States, all projects in each county were enumerated in 1950 with county drains, and handled as though they were one project. See text.

²Bottomlands indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises" enumerated in the Census of Irrigation. See footnote 4 and text.

³Land in two or more projects counted only once.

⁴Extensive contiguous areas not used for agriculture or not drained. See text.

⁵Interspersed nonagricultural or nonirrigated areas not excluded. See footnote 2 and text.

⁶The areas included represented drained land reported by "irrigation enterprises" enumerated in the 1950 Census of Irrigation. Such reports, from the 1950 Census of Irrigation, were included in the data presented for the 1950 Census of Drainage. See text.

⁷No drainage projects reported for year indicated.

SUMMARY

13

IN FARMS, BY STATES: CENSUSES OF 1920 TO 1960

State	Land in farms (acres)					Approximate land area, 1960 (acres) (39 States)

Italics indicate States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. For the "county-drain" States all drainage projects in each county were enumerated as a unit. See footnote 5 and text.

Boldface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises" enumerated in the Census of Irrigation.

¹Land in two or more projects included only once.

²Difference in the sum of individual projects and the land in drainage projects counting land included in two or more projects only once (see footnotes 1 and 3); land in three or more projects counted two or more times. This duplication in counting results in some totals of overlapped areas exceeding the total land in drainage projects.

³Land in two or more projects included in each project. Areas shown equal the sum of areas of individual projects, with no deduction for land included in more than one project.

⁴For 1940, 1930, and 1920, data include projects that had been superseded but had contributed to the investment and works of a later project.

⁵For "county-drain" States in 1950, all projects in each county were enumerated as a unit, therefore, no overlapped areas were reported for these States. See text.

AREAS SERVED BY TWO OR MORE PROJECTS, 1960: AND OVERLAPPED AREAS, 1920 TO 1950; BY STATES

State	Overlapped areas, 1920 to 1950 ² (acres)				Total: of areas of individual projects ³ (acres)

NA Not available.

Italics indicate States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. For the "county-drain" States in 1950 all drainage projects in each county were enumerated as a unit. See text.

Boldface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises" enumerated in the Census of Irrigation. See text.

¹Total cost of drainage works and services minus cost of new works.

²For 1950, Census data on costs of drainage works and services not available for 2,076 projects and 2,114,059 acres in "irrigation enterprises" enumerated in Census of Irrigation. For 1950, Census cost of new works reported for 1940-1949 relates to new works for lands not previously drained. See text.

³For 1950 Census for "county-drain" States, count of projects reporting represents counties reporting—in that year all drains in each county were enumerated as a unit. See text.

Italics indicate States identified in 1950 as "county-drain" States. The 10 States were designated "drainage-district" States. For the "county-drain" States in 1950 all drainage projects in each county were enumerated as a unit. See text.

Boldface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises" enumerated in the Census of Irrigation. See text.

NA Not available.

¹Floodgates, culverts, bridges, drainage wells or pumps, land leveling, etc.

²For 1950 Census, data for drainage works not available for 9,076 projects and 4,119,059 acres of drained land in "irrigation enterprises" enumerated in Census of Irrigation: data for pumps not available for "county-drain" States. See text.

³For 1950, for "county-drain" States, count of projects reporting represents number reporting—in that year all drains in each county were enumerated as a unit. See text.

⁴Data for this and other designated States not available individually but included in totals for all drainage States.

Italics indicate States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. See footnote 6 and text.

Boldface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises." See footnote 4 and text.

Land in two or more projects included in each project. Areas shown equal the sum of areas of individual projects with no deduction for land included in more than one project.

²In 1960, only projects of 500 or more acres were included. See footnote 6 and text.

³For 1940, 1950, and 1960, number refers to the total projects including projects which superseded by later projects. For 1920, data for number of projects, by size of project, were not available from the 1920 report. The counts presented for that year are those carried in the 1940 report (see Summary Table 6) and differ from the total count of projects reported in 1920.

⁴For 1950, projects under 500 acres include "irrigation enterprises" with drainage enumerated in the Census of Irrigation (see Summary Table 12) and 3 "county-drain" counties representing portions of intercounty drains (see footnote 6). The enumeration for the 1950 Census of Drainage included only drainage projects of 500 or more acres.

⁵Revised.

BY STATES: CENSUSES OF 1920 TO 1960—Continued

[illegible]

¹In 1960, all drains under county management were enumerated as a unit with each portion of intercounty projects credited to the county where located. In 1980, the procedure was similar for "county-drain" States but the county report included all projects in the county, including those not under county management. The 1960 and 1980 data include reports for county drains for the county with more acreage than the county with fewer acreage used to develop acreage used to intercounty projects. The 1950 data (under 500 acres) include 3 county drains (Oregon, California, and Idaho) and 14, 1960, 1980, and 1990, each drain was considered a separate project.

²Totals for 30 States shown for 1950 were based on interstate projects divided on State lines. The 1950 report also shows totals, by size of project, for 30 interstate projects not divided on State lines.

⁹As shown for 1920 in the 1940 report. See footnote 3.

DRAINAGE OF AGRICULTURAL LANDS

¹Italics indicate States identified in 1950 as "county-drain" States. The other States were designated "drainage-district" States. For the "county-drain" States in 1950 all projects in each county were enumerated as a unit; therefore, the counts shown for that year represent the number of county reports. For 1940, 1930, and 1920, each drain was counted as a separate project. See footnote 2 and text.

²Surface indicates States, other than "county-drain," for which the 1950 drainage data included drained lands in "irrigation enterprises." See footnote 4 and text.

NA Not available.

³In 1940, 1930, and 1920, the classification by type of organization included drainage undertakings by two or more operators cooperating without organization under statute law with "individual ownership enterprises." The descriptive project of 10,100 acres in Georgia was identified in the text of the 1920 report as "individual ownership enterprises."

⁴Land in two or more projects included in each project. Areas shown equal the sum of areas of individual projects with no deduction for land included in more than one project.

Italics indicate States identified in 1950 as "county-train" States. The other States were designated "drainage-district" States. For the "county-train" States in 1950 all drainage projects in each county were enumerated as a unit; therefore, the counts shown for that year represent the number of county reports. For 1940, 1930, and 1920, each county was counted as a separate project. See footnote 4 and text.

NA Not available.

¹Land in two or more projects included only once.

²Land in two or more projects included in each project. Areas shown equal the sum of areas of individual projects with no deduction for land included in more than one project.

DRAINAGE PROJECTS BY YEAR OF ORGANIZATION, CENSUSES OF 1920 TO 1960; BY STATES

This is a detailed map of the state of Nevada, showing its county boundaries and major cities. The map is oriented with latitude and longitude coordinates. The counties shown are Humboldt, Pershing, Lander, Churchill, Esmeralda, Mineral, Lincoln, White Pine, and Clark. Major cities and towns marked include Reno, Carson City (the state capital), Virginia City, Winnemucca, Elko, Eureka, Ely, Fallon, Austin, Tonopah, Goldfield, Hawthorne, and Las Vegas. The map also shows the Humboldt River, Pyramid Lake, Walker Lake, and Lake Mead. A scale bar at the bottom indicates distances from 0 to 80 miles. A legend at the bottom left identifies the state capital with a star and county seats with a circle. The map is framed by latitude lines from 36°N to 42°N and longitude lines from 114°W to 120°W.

COMMONWEALTH OF VIRGINIA

LARRY R. GIBSON, 1991

STATE CAPITAL: RICHMOND

COUNTY SEAT: (indicated by a dot)

Scale: 0 to 100 miles

Map showing the Commonwealth of Virginia, including major cities, counties, and the Atlantic Ocean.

[illegible]

The map displays the state of Wyoming with its county boundaries and major cities. The counties shown are: Big Horn, Carbon, Casper, Cheyenne, Converse, Fremont, Hot Springs, Johnson, Lincoln, Natrona, Niobrara, Park, Sheridan, Sublette, Teton, Uinta, and Wyo. Major cities and towns include: Cheyenne (State Capital), Laramie, Casper, Rawlins, Torrington, Goshen, Newcastle, Weston, Buffalo, and Thermopolis. The map also shows the Yellowstone National Park, the Teton and Wind River ranges, and major rivers like the Yellowstone, Snake, and Colorado. The map is oriented with latitude and longitude markings along the edges.

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

⁵Included in State total only.

¹Includes Adams, Bannock, Bear Lake, Bingham, Blaine, Boise, Bonneville, Camas, Caribou, Cassia, Elmore, Fremont, Gooding, Jefferson, Jerome, Lemhi, Minidoka, Oneida, Teton, Twin Falls, Valley, and Washington counties.

²The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

³Land served by two or more projects counted only once.

⁴Acres served by two projects are included for each project. See text.

⁵Includes projects taken over by another project prior to 1960. See text.

⁶Included in State total only.

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

NA Not available.

¹In 1940 each county drain was counted as a separate project. See text.²Not fully comparable. See text.³All projects in 1950 included with county drains. See text.⁴1920 figures exclude 32,367 acres for which type was not reported; and 5,909 acres for which date of organization was not reported.⁵Cost of new works for lands not previously drained.

DRAINAGE OF AGRICULTURAL LANDS

State Table 2.—DRAINAGE

Size of project (Based on area of agricultural land in project)	Number of projects	Area drained and used for agriculture, 1960		Area by period drainage was established			
		Total (acres)	Served by two or more projects (acres)	Before 1950		Area added 1950-1959	
				Projects reporting	Acres	Projects reporting	Acres

¹Includes Barton, Greenwood, Haskell, Kearny, Lyon, Ness, Osborne, Pawnee, Scott, Sheridan, and Trego counties.²The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.³Land served by two or more projects counted only once.⁴Acres served by two projects are included for each project. See text.⁵Includes projects taken over by another project prior to 1960. See text.

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

⁵Included in State total only.

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

34 Other (see text).....projects reporting...
35 Cost of maintenance, operation, repair, and administration.....projects reporting...	1	1	1
36 dollars...	477	763	764

¹The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

²Land served by two or more projects counted only once.

³Acres served by two projects are included for each project. See text.

⁴Includes projects taken over by another project prior to 1960. See text.

36 dollars.....	29,300	(⁶)	129,139	651,440	500	54	(⁶)	382,902

¹Includes Atascosa, Bexar, Brown, Castro, Crosby, Dawson, Deaf Smith, Dimmit, El Paso, Gonzales, Hale, Hockley, Hudspeth, Lamb, Lampasas, Lubbock, Lynn, McLennan, Mescon, Maverick, Menard, Pecos, Randall, Reeves, Starr, Swisher, Tarrant, Taylor, Wichita, Williamson, and Zapata counties.

²The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.

³Land served by two or more projects counted only once.

⁴Acres served by two projects are included for each project. See text.

⁵Includes projects taken over by another project prior to 1960. See text.

⁶Included in State total only.

¹Includes Albany, Carbon, Converse, Crook, Fremont, Goshen, Hot Springs, Johnson, Laramie, Lincoln, Natrona, Park, Sheridan, Sublette, Sweetwater, Teton, and Uinta counties.²The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters is located, even though a part of the farm may be situated in an adjoining county.³Land served by two or more projects counted only once.⁴Acres served by two projects are included for each project. See text.⁵Includes projects taken over by another project prior to 1960. See text.

APPENDIX

The Questionnaire

(357)

Form 90(D) (8-12-56)	This census is authorized by Act of Congress, United States Code, Title 13, Sections 5, 9, 142, 221, 223, and 224, requiring that the inquiries be answered completely and accurately, and guaranteeing that the information furnished be accorded confidential treatment. <i>The census report cannot be used for purposes of taxation, investigation, or regulation.</i>		Budget Bureau No. 41-0965 Approval expires December 31, 1960																		
D1 No.	U.S. DEPARTMENT OF COMMERCE—BUREAU OF THE CENSUS WASHINGTON D1 CENSUS OF DRAINAGE OF AGRICULTURAL LANDS: 1960																				
State	County																				
Section I.—ORGANIZATION																					
1. What is the name of this drainage project or organization? (a) If the name of the organization which controls it is different, give name of organization here _____																					
2. What person or persons may be contacted in reference to this drainage project or organization? <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; border-bottom: 1px solid black;">Name</td> <td style="width: 30%; border-bottom: 1px solid black;">Connection with project or organization</td> <td style="width: 40%; border-bottom: 1px solid black;">Telephone number</td> </tr> <tr> <td style="border-bottom: 1px solid black;">Address</td> <td></td> <td></td> </tr> <tr> <td style="border-bottom: 1px solid black;">Name</td> <td style="border-bottom: 1px solid black;">Connection with project or organization</td> <td style="border-bottom: 1px solid black;">Telephone number</td> </tr> <tr> <td style="border-bottom: 1px solid black;">Address</td> <td></td> <td></td> </tr> <tr> <td style="border-bottom: 1px solid black;">Name</td> <td style="border-bottom: 1px solid black;">Connection with project or organization</td> <td style="border-bottom: 1px solid black;">Telephone number</td> </tr> <tr> <td style="border-bottom: 1px solid black;">Address</td> <td></td> <td></td> </tr> </table>				Name	Connection with project or organization	Telephone number	Address			Name	Connection with project or organization	Telephone number	Address			Name	Connection with project or organization	Telephone number	Address		
Name	Connection with project or organization	Telephone number																			
Address																					
Name	Connection with project or organization	Telephone number																			
Address																					
Name	Connection with project or organization	Telephone number																			
Address																					
3. Is this project or organization— (a) Owned by one land owner (individual, partnership, corporation, or institution)? <input type="checkbox"/> (If (a) is marked, skip to question [6]) (b) A cooperative or mutual organization? <input type="checkbox"/> (If (b) is marked, skip to question [6]) (c) A legally organized public organization? <input type="checkbox"/>																					
4. Has this drainage project or organization— (a) Officials now to conduct its business? <input type="checkbox"/> (b) No officials now, and has never been legally dissolved? <input type="checkbox"/> (c) Been dissolved by court action? <input type="checkbox"/>																					
5. Does this project provide any major public service other than agricultural drainage? (Storm water removal, flood control, mosquito control, sewage disposal, etc.) <input type="checkbox"/> No <input type="checkbox"/> Yes If "Yes," describe public service provided: _____																					
[6] What year was this drainage project or organization started? Before 1950? <input type="checkbox"/> 1950 or later? <input type="checkbox"/> → What year? _____ 7. Does this drainage project extend into counties other than the county listed at the top of this questionnaire? <input type="checkbox"/> No <input type="checkbox"/> Yes If "Yes," what other counties? _____ If the drainage organization operates, or the drainage project extends into other counties, separate questionnaires are required for the portions in each county. The information given for the following questions should relate only to the portion in this county. See worksheet on back of this questionnaire.																					
Section II.—OPERATIONS DURING 10 YEARS—1950 TO 1959																					
You may report on either a calendar or fiscal year basis. Indicate which Calendar year basis <input type="checkbox"/> Fiscal year basis <input type="checkbox"/> Jan. 1, 1950, through Dec. 31, 1959 _____ through _____ (month) (day) (month) (day) (Include full 10-year period) (You may use worksheet on back to total operations for the 10-year period.)																					
8. During the past 10 years, has there been by or for the management of this project or organization any— (a) Construction or installation of new drainage works, including enlargement or complete replacement of prior works? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (b) Major clean-out or restoration of old works? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (c) Maintenance, operation, or repair of drainage works? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (d) Other operations? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> If "Yes" for (d), describe: _____ (If "No" for all parts (a) through (d), skip to Section III.)																					
9. What was the total cost of all drainage works and services provided for this 10-year period? \$ _____ (Include all costs relating to works and services provided during the 10 years regardless of when paid or to be paid. Be sure to include costs of organization, engineering, rights-of-way, legal services, and administration. Do not include payments on principal or interest on bonds or notes.)																					
10. What new drainage works have been constructed, enlarged, or installed, during this 10-year period? <input type="checkbox"/> None <input type="checkbox"/> (If "None," mark X and skip to Section III.) (a) Open ditches? <input type="checkbox"/> None <input type="checkbox"/> Miles _____ /10 or Linear feet _____ (b) Tile or other covered drains? <input type="checkbox"/> None <input type="checkbox"/> Miles _____ /10 or Linear feet _____ (c) Levees or dikes? <input type="checkbox"/> None <input type="checkbox"/> Miles _____ /10 or Linear feet _____ (d) Pumps? <input type="checkbox"/> None <input type="checkbox"/> Number _____ (e) Other? <input type="checkbox"/> None <input type="checkbox"/> _____																					
11. Of the total costs of works and services provided in this 10-year period (question 9), how much represented new drainage works (question 10)? <input type="checkbox"/> None <input type="checkbox"/> \$ _____																					
12. Where is the outlet of the new drainage works? (a) Name of lake, stream, or ditch receiving discharge _____ (b) Location of outlet: Section _____ Township _____ Range _____ or _____ miles (direction) from _____ (nearest town or place)																					
Section III.—AREA IN PROJECT																					
Attach to this report a map for this project or organization indicating drained areas added since January 1, 1950. Any sizeable included areas which are not agricultural lands served by the drainage works of this project should be outlined. (You may sketch in the area on the township grid on the back of this questionnaire, if convenient.) To enumerate: Check shaded squares when area is left has been mapped																					
13. What was the total area included in this drainage project or organization in this county on January 1, 1950? <input type="checkbox"/> None <input type="checkbox"/> Acres _____ (If "None," skip to question [15].)																					
14. How much area has been added since January 1, 1950? <input type="checkbox"/> None <input type="checkbox"/> Acres _____																					
[15] What was the total area for this project or organization on January 1, 1960? Acres _____ (If organized before 1950, and area in 1960 does not equal sum of questions 13 and 14, explain under Remarks.)																					
16. Are there within this total area (question 15) any contiguous tracts totaling 500 or more acres of any of the following— (a) Land that no longer receives drainage benefits from these drainage facilities (because drainage works have deteriorated completely)? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (b) Land that receives no drainage benefits from works of this project. Include land protected from overflow with no drains provided for the protected land? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (c) Land for which the need for drainage resulted solely because of irrigation? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (d) Land not now being used for agriculture? <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> (Wasteland, cutover land, residential, industrial, airports, military installation, public parks, wildlife refuge, State or National Forest, commercial woodland, etc.) Give present use and identify name of tract when possible: _____																					
17. If "Yes" for any part of question 16—What is the total area of the tracts with "Yes"? Acres _____																					

Section IV.—OVERLAPPED AREA		Section V.—CERTIFICATION																					
<p>18. Has any other drainage project or organization, at any time during the past 10 years—</p> <p>(a) Taken over all or any part of this project? <p>REMARKS:</p>																							

OFFICE OF
THE DIRECTORDEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS
WASHINGTON 25

Dear Sir:

A Census of Drainage organizations covering drainage operations for the year 1959 is now being taken by the Bureau of the Census. An Act of Congress (13 USC; Sec. 142) directs the Bureau of the Census to take this census and requires a report from you. This same Act requires that information furnished for your organization (1) be kept confidential, and (2) that your report may be seen only by sworn employees of the Bureau of the Census. The information provided cannot be used for taxation, regulation, or investigation.

It is important that all questions on the attached form be answered for your organization. Where exact information cannot be given, you are requested to supply carefully prepared estimates.

The enclosed form should be filled even though the organization is no longer active or the drains are no longer functioning. A sketch map of the project lands may be required. This map is necessary provided any drained areas have been added since January 1, 1950 or if any sizeable acreage within the project boundaries does not represent agricultural lands served by the drainage works of this project. If no area has been added since 1950 and only agricultural lands are served by the works, a map of the project lands need not be furnished. If you are unable to supply the requested information, will you please enter, under question 2 of the form, the name of the person who can.

Please fill out and return the enclosed form within 30 days. Please use the self-addressed official envelope, which does not require postage, to return your report.

Sincerely yours,

Robert W. Burgess
Director
Bureau of the Census

Form 60D2
(10-12-59)

This census is authorized by Act of Congress, United States Code, Title 13, Sections 5, 9, 142, 221, 223, 224, requiring that the inquiries be answered completely and accurately, and guaranteeing that the information furnished be accorded confidential treatment. The census report cannot be used for purposes of taxation, investigation, or regulation.

Budget Bureau No. 41-59101
Approval expires June 30, 1960

D2 SURVEY OF DRAINAGE OF IRRIGATED AGRICULTURAL LANDS 1960

1. What organization(s) or person(s) is(are) responsible for the drainage of 500 or more acres of agricultural lands served by your irrigation project?

Name _____

Mail address _____

Name _____

Mail address _____

Dear Sirs:

In preparation for the 1960 Census of Drainage, authorized by an Act of Congress, we must obtain a few facts about the drainage of lands served by your irrigation project.

Will you kindly fill in the information requested at the right of this letter and return in the enclosed official envelope which requires no postage.

Your cooperation in furnishing this information will be greatly appreciated.

Sincerely yours

Robert W. Burgess
Director
Bureau of the Census

2. Did the need for this drainage arise solely because of irrigation?

☐ Yes, to control alkali or seepage from irrigation.
(Mark one.) ☐ No, drainage was to improve naturally wet lands.

3. Are 500 acres or more drained by constructed works?

☐ Yes (500 acres or more are drained).
(Mark one.) ☐ No (less than 500 are drained).

Remarks: _____

DRAINAGE OF AGRICULTURAL LANDS

UNITED STATES DEPARTMENT OF AGRICULTURE
Soil Conservation Service
Washington 25, D. C.

ADVISORY NOTICE W-1496

October 2, 1959

To: Work Unit Conservationists

From: D. A. Williams, Administrator

Re: RECORDS AND REPORTS - Information on Drainage Enterprises for the
1960 Census of Drainage

The Bureau of the Census has requested the assistance of the Soil Conservation Service in connection with the taking of the 1960 Census of Drainage. The 1960 Census of Drainage will include all drainage projects that benefit 500 acres or more of land for agriculture.

Under the proposed plans primary dependence of coverage will be the preparation in advance of the enumeration of a listing of the projects to be enumerated. As a starting point the Bureau of the Census expects to canvass all projects that were included in the last Census, that of 1950.

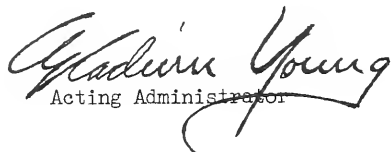

The Bureau of the Census is depending upon the Soil Conservation Service to provide a listing of drainage projects undertaken since 1950.

Will you kindly list in the spaces provided any projects in or partially in the county, or counties, served by your office. Include only projects that provide drainage benefits for approximately 500 or more acres of land for agriculture. Include only jobs completed or started since January 1, 1950. Include all projects--group, individual, and public--irrespective of whether they received technical assistance from SCS. Do not include projects where the need for drainage resulted solely because of irrigation.

In many cases you will be able to provide information on physical works, costs, and maps and you should so indicate in the appropriate boxes. Later, when the enumeration is under way, we would appreciate any help you might be able to give the Drainage Census enumerator.

Three copies of each list should be prepared. The original and one copy should be mailed to the state office and one copy retained in the files of the preparing office. The Bureau of Census has requested us to provide this information by November 9, 1959, so your list should reach the state office by November 2, 1959.

In those counties where no new drainage projects of 500 acres or more in size have been undertaken since 1950, the work unit conservationist should return the list to the state office showing the county names, and indicating the absence of new projects.
